LARS THØRVÄLD, The Thørväld Group, Iceland

VALERIE BÉRANGER, Inria Paris-Rocquencourt, France

APARNA PATEL, Rajiv Gandhi University, India

HUIFEN CHAN, Tsinghua University, China

CHARLES PALMER, Palmer Research Laboratories, USA

JOHN SMITH, The Thørväld Group, Iceland

JULIUS P. KUMQUAT, The Kumquat Consortium, USA

A clear and well-documented L^AT_EX document is presented as an article formatted for publication by ACM in a conference proceedings or journal publication. Based on the “acmart” document class, this article presents and explains many of the common variations, as well as many of the formatting elements an author may use in the preparation of the documentation of their work.

CCS Concepts: • Computer systems organization → Embedded systems; Redundancy; Robotics; • Networks → Network reliability.

Additional Key Words and Phrases: datasets, neural networks, gaze detection, text tagging

ACM Reference Format:

Ben Trovato, G.K.M. Tobin, Lars Thørväld, Valerie Béranger, Aparna Patel, Huifen Chan, Charles Palmer, John Smith, and Julius P. Kumquat. 2018. The Name of the Title Is Hope. *J. ACM* 37, 4, Article 111 (August 2018), 10 pages. <https://doi.org/XXXXXX.XXXXXXX>

1 INTRODUCTION

ACM’s consolidated article template, introduced in 2017, provides a consistent L^AT_EX style for use across ACM publications, and incorporates accessibility and metadata-extraction functionality necessary for future Digital Library endeavors. Numerous ACM and SIG-specific L^AT_EX templates have been examined, and their unique features incorporated into this single new template.

If you are new to publishing with ACM, this document is a valuable guide to the process of preparing your work for publication. If you have published with ACM before, this document provides insight and instruction into more recent changes to the article template.

*Both authors contributed equally to this research.

<https://doi.org/XXXXXX.XXXXXXX>

50 The “*acmart*” document class can be used to prepare articles for any ACM publication — conference or journal, and for any stage of publication, from review to final “camera-ready” copy, to the
 51 author’s own version, with *very* few changes to the source.
 52

53 2 TEMPLATE OVERVIEW

55 As noted in the introduction, the “*acmart*” document class can be used to prepare many different kinds of documentation — a double-blind initial submission of a full-length technical paper, a
 56 two-page SIGGRAPH Emerging Technologies abstract, a “camera-ready” journal article, a SIGCHI
 57 Extended Abstract, and more — all by selecting the appropriate *template style* and *template parameters*.
 58

60 This document will explain the major features of the document class. For further information,
 61 the *L^AT_EX User’s Guide* is available from <https://www.acm.org/publications/proceedings-template>.

63 2.1 Template Styles

64 The primary parameter given to the “*acmart*” document class is the *template style* which corresponds
 65 to the kind of publication or SIG publishing the work. This parameter is enclosed in square brackets
 66 and is a part of the *documentclass* command:

67 \documentclass[STYLE]{acmart}

68 Journals use one of three template styles. All but three ACM journals use the *acmsmall* template
 69 style:
 70

- 71 • *acmsmall*: The default journal template style.
- 72 • *acmlarge*: Used by JOCCH and TAP.
- 73 • *acmtog*: Used by TOG.

74 The majority of conference proceedings documentation will use the *acmconf* template style.

- 75 • *acmconf*: The default proceedings template style.
- 76 • *sigchi*: Used for SIGCHI conference articles.
- 77 • *sigplan*: Used for SIGPLAN conference articles.

79 2.2 Template Parameters

80 In addition to specifying the *template style* to be used in formatting your work, there are a number
 81 of *template parameters* which modify some part of the applied template style. A complete list of
 82 these parameters can be found in the *L^AT_EX User’s Guide*.

83 Frequently-used parameters, or combinations of parameters, include:

- 84 • *anonymous*, *review*: Suitable for a “double-blind” conference submission. Anonymizes the
 85 work and includes line numbers. Use with the *review* command to print the submission’s unique
 86 ID on each page of the work.
- 87 • *authorversion*: Produces a version of the work suitable for posting by the author.
- 88 • *screen*: Produces colored hyperlinks.

89 This document uses the following string as the first command in the source file:

90 \documentclass[acmsmall,screen,review]{acmart}

92 3 MODIFICATIONS

94 Modifying the template — including but not limited to: adjusting margins, typeface sizes, line
 95 spacing, paragraph and list definitions, and the use of the *\vspace* command to manually adjust
 96 the vertical spacing between elements of your work — is not allowed.

97 **Your document will be returned to you for revision if modifications are discovered.**

99 **4 TYPEFACES**

100 The “acmart” document class requires the use of the “Libertine” typeface family. Your \TeX installation
101 should include this set of packages. Please do not substitute other typefaces. The “lmodern”
102 and “ltimes” packages should not be used, as they will override the built-in typeface families.
103

104 **5 TITLE INFORMATION**

105 The title of your work should use capital letters appropriately - <https://capitalizemytitle.com/> has
106 useful rules for capitalization. Use the `title` command to define the title of your work. If your
107 work has a subtitle, define it with the `subtitle` command. Do not insert line breaks in your title.
108

109 If your title is lengthy, you must define a short version to be used in the page headers, to prevent
110 overlapping text. The `title` command has a “short title” parameter:
111

```
111    \title[short title]{full title}
```

112 **6 AUTHORS AND AFFILIATIONS**

114 Each author must be defined separately for accurate metadata identification. As an exception,
115 multiple authors may share one affiliation. Authors’ names should not be abbreviated; use full first
116 names wherever possible. Include authors’ e-mail addresses whenever possible.

117 Grouping authors’ names or e-mail addresses, or providing an “e-mail alias,” as shown below, is
118 not acceptable:

```
119    \author{Brooke Aster, David Mehldau}  
120    \email{dave,judy,steve@university.edu}  
121    \email{firstname.lastname@phillips.org}
```

123 The `authornote` and `authornotemark` commands allow a note to apply to multiple authors –
124 for example, if the first two authors of an article contributed equally to the work.

125 If your author list is lengthy, you must define a shortened version of the list of authors to be
126 used in the page headers, to prevent overlapping text. The following command should be placed
127 just after the last `\author{}` definition:

```
128    \renewcommand{\shortauthors}{McCartney, et al.}
```

129 Omitting this command will force the use of a concatenated list of all of the authors’ names, which
130 may result in overlapping text in the page headers.

131 The article template’s documentation, available at <https://www.acm.org/publications/proceedings-template>, has a complete explanation of these commands and tips for their effective use.

133 Note that authors’ addresses are mandatory for journal articles.

135 **7 RIGHTS INFORMATION**

136 Authors of any work published by ACM will need to complete a rights form. Depending on the kind
137 of work, and the rights management choice made by the author, this may be copyright transfer,
138 permission, license, or an OA (open access) agreement.
139

140 Regardless of the rights management choice, the author will receive a copy of the completed
141 rights form once it has been submitted. This form contains \LaTeX commands that must be copied
142 into the source document. When the document source is compiled, these commands and their
143 parameters add formatted text to several areas of the final document:

- 144 • the “ACM Reference Format” text on the first page.
- 145 • the “rights management” text on the first page.
- 146 • the conference information in the page header(s).

148 Table 1. Frequency of Special Characters
149
150

151	Non-English or Math	Frequency	Comments
152	\emptyset	1 in 1,000	For Swedish names
153	π	1 in 5	Common in math
154	\$	4 in 5	Used in business
155	Ψ_1^2	1 in 40,000	Unexplained usage

156
157 Rights information is unique to the work; if you are preparing several works for an event, make
158 sure to use the correct set of commands with each of the works.
159160 The ACM Reference Format text is required for all articles over one page in length, and is optional
161 for one-page articles (abstracts).
162

8 CCS CONCEPTS AND USER-DEFINED KEYWORDS

163 Two elements of the “acmart” document class provide powerful taxonomic tools for you to help
164 readers find your work in an online search.
165166 The ACM Computing Classification System — <https://www.acm.org/publications/class-2012> — is
167 a set of classifiers and concepts that describe the computing discipline. Authors can select entries
168 from this classification system, via <https://dl.acm.org/ccs/ccs.cfm>, and generate the commands to
169 be included in the *L^AT_EX* source.170 User-defined keywords are a comma-separated list of words and phrases of the authors’ choosing,
171 providing a more flexible way of describing the research being presented.
172173 CCS concepts and user-defined keywords are required for for all articles over two pages in length,
174 and are optional for one- and two-page articles (or abstracts).
175

9 SECTIONING COMMANDS

176 Your work should use standard *L^AT_EX* sectioning commands: `section`, `subsection`, `subsubsection`,
177 and `paragraph`. They should be numbered; do not remove the numbering from the commands.
178179 Simulating a sectioning command by setting the first word or words of a paragraph in boldface
180 or italicized text is **not allowed**.
181

10 TABLES

182 The “acmart” document class includes the “booktabs” package — <https://ctan.org/pkg/booktabs> —
183 for preparing high-quality tables.
184185 Table captions are placed *above* the table.
186187 Because tables cannot be split across pages, the best placement for them is typically the top
188 of the page nearest their initial cite. To ensure this proper “floating” placement of tables, use the
189 environment `table` to enclose the table’s contents and the table caption. The contents of the table
190 itself must go in the `tabular` environment, to be aligned properly in rows and columns, with the
191 desired horizontal and vertical rules. Again, detailed instructions on `tabular` material are found in
192 the *L^AT_EX User’s Guide*.
193194 Immediately following this sentence is the point at which Table 1 is included in the input file;
195 compare the placement of the table here with the table in the printed output of this document.
196197 To set a wider table, which takes up the whole width of the page’s live area, use the environment
198 `table*` to enclose the table’s contents and the table caption. As with a single-column table, this
199 wide table will “float” to a location deemed more desirable. Immediately following this sentence

Table 2. Some Typical Commands

Command	A Number	Comments
\author	100	Author
\table	300	For tables
\table*	400	For wider tables

is the point at which Table 2 is included in the input file; again, it is instructive to compare the placement of the table here with the table in the printed output of this document.

Always use midrule to separate table header rows from data rows, and use it only for this purpose. This enables assistive technologies to recognise table headers and support their users in navigating tables more easily.

11 MATH EQUATIONS

You may want to display math equations in three distinct styles: inline, numbered or non-numbered display. Each of the three are discussed in the next sections.

11.1 Inline (In-text) Equations

A formula that appears in the running text is called an inline or in-text formula. It is produced by the **math** environment, which can be invoked with the usual `\begin{...} \end{...}` construction or with the short form `$...$`. You can use any of the symbols and structures, from α to ω , available in L^AT_EX [24]; this section will simply show a few examples of in-text equations in context. Notice how this equation: $\lim_{n \rightarrow \infty} x = 0$, set here in in-line math style, looks slightly different when set in display style. (See next section).

11.2 Display Equations

A numbered display equation—one set off by vertical space from the text and centered horizontally—is produced by the **equation** environment. An unnumbered display equation is produced by the **displaymath** environment.

Again, in either environment, you can use any of the symbols and structures available in L^AT_EX; this section will just give a couple of examples of display equations in context. First, consider the equation, shown as an inline equation above:

$$\lim_{n \rightarrow \infty} x = 0 \tag{1}$$

Notice how it is formatted somewhat differently in the **displaymath** environment. Now, we'll enter an unnumbered equation:

$$\sum_{i=0}^{\infty} x + 1$$

and follow it with another numbered equation:

$$\sum_{i=0}^{\infty} x_i = \int_0^{\pi+2} f \tag{2}$$

just to demonstrate L^AT_EX's able handling of numbering.

246 12 FIGURES

247 The “figure” environment should be used for figures. One or more images can be placed within a
248 figure. If your figure contains third-party material, you must clearly identify it as such, as shown in
249 the example below.
250

278 Fig. 1. 1907 Franklin Model D roadster. Photograph by Harris & Ewing, Inc. [Public domain], via Wikimedia
279 Commons. (<https://goo.gl/VLCRBB>).
280

281 Your figures should contain a caption which describes the figure to the reader.
282

283 Figure captions are placed *below* the figure.
284

285 Every figure should also have a figure description unless it is purely decorative. These descriptions
286 convey what’s in the image to someone who cannot see it. They are also used by search engine
crawlers for indexing images, and when images cannot be loaded.
287

288 A figure description must be unformatted plain text less than 2000 characters long (including
289 spaces). **Figure descriptions should not repeat the figure caption – their purpose is to**
290 capture important information that is not already provided in the caption or the main
291 text of the paper. For figures that convey important and complex new information, a short
292 text description may not be adequate. More complex alternative descriptions can be placed in an
293 appendix and referenced in a short figure description. For example, provide a data table capturing
the information in a bar chart, or a structured list representing a graph. For additional information
294

295 regarding how best to write figure descriptions and why doing this is so important, please see
 296 <https://www.acm.org/publications/taps/describing-figures/>.

297 298 12.1 The “Teaser Figure”

299 A “teaser figure” is an image, or set of images in one figure, that are placed after all author and
 300 affiliation information, and before the body of the article, spanning the page. If you wish to have
 301 such a figure in your article, place the command immediately before the `\maketitle` command:

```
302 \begin{teaserfigure}
303   \includegraphics[width=\textwidth]{sampleteaser}
304   \caption{figure caption}
305   \Description{figure description}
306 \end{teaserfigure}
```

307 308 13 CITATIONS AND BIBLIOGRAPHIES

309 The use of Bib_TE_X for the preparation and formatting of one’s references is strongly recommended.
 310 Authors’ names should be complete — use full first names (“Donald E. Knuth”) not initials (“D. E.
 311 Knuth”) — and the salient identifying features of a reference should be included: title, year, volume,
 312 number, pages, article DOI, etc.

313 The bibliography is included in your source document with these two commands, placed just
 314 before the `\end{document}` command:

```
315 \bibliographystyle{ACM-Reference-Format}
316 \bibliography{bibfile}
```

317 where “`bibfile`” is the name, without the “`.bib`” suffix, of the Bib_TE_X file.

318 Citations and references are numbered by default. A small number of ACM publications have
 319 citations and references formatted in the “author year” style; for these exceptions, please include
 320 this command in the **preamble** (before the command “`\begin{document}`”) of your L_AT_EX source:
 321

```
322 \citestyle{acmauthoryear}
```

323 Some examples. A paginated journal article [2], an enumerated journal article [10], a reference
 324 to an entire issue [9], a monograph (whole book) [23], a monograph/whole book in a series (see
 325 2a in spec. document) [17], a divisible-book such as an anthology or compilation [12] followed
 326 by the same example, however we only output the series if the volume number is given [13] (so
 327 Editor00a’s series should NOT be present since it has no vol. no.), a chapter in a divisible book [35],
 328 a chapter in a divisible book in a series [11], a multi-volume work as book [22], a couple of articles
 329 in a proceedings (of a conference, symposium, workshop for example) (paginated proceedings
 330 article) [3, 15], a proceedings article with all possible elements [34], an example of an enumerated
 331 proceedings article [14], an informally published work [16], a couple of preprints [6, 7], a doctoral
 332 dissertation [8], a master’s thesis: [4], an online document / world wide web resource [1, 28, 36], a
 333 video game (Case 1) [27] and (Case 2) [26] and [25] and (Case 3) a patent [33], work accepted for
 334 publication [30], ’YYYYb’-test for prolific author [31] and [32]. Other cites might contain ‘duplicate’
 335 DOI and URLs (some SIAM articles) [21]. Boris / Barbara Beeton: multi-volume works as books [19]
 336 and [18]. A couple of citations with DOIs: [20, 21]. Online citations: [36–38]. Artifacts: [29] and [5].

337 338 14 ACKNOWLEDGMENTS

339 Identification of funding sources and other support, and thanks to individuals and groups that
 340 assisted in the research and the preparation of the work should be included in an acknowledgment
 341 section, which is placed just before the reference section in your document.

342 This section has a special environment:

343

```
344 \begin{acks}  
345 ...  
346 \end{acks}
```

so that the information contained therein can be more easily collected during the article metadata extraction phase, and to ensure consistency in the spelling of the section heading.

Authors should not prepare this section as a numbered or unnumbered \section; please use the “acks” environment.

15 APPENDICES

If your work needs an appendix, add it before the “`\end{document}`” command at the conclusion of your source document.

Start the appendix with the “`appendix`” command:

\appendix

and note that in the appendix, sections are lettered, not numbered. This document has two appendices, demonstrating the section and subsection identification method.

16 MULTI-LANGUAGE PAPERS

Papers may be written in languages other than English or include titles, subtitles, keywords and abstracts in different languages (as a rule, a paper in a language other than English should include an English title and an English abstract). Use `language=...` for every language used in the paper. The last language indicated is the main language of the paper. For example, a French paper with additional titles and abstracts in English and German may start with the following command

```
\documentclass[sigconf, language=english, language=german,  
language=french]{acmart}
```

The title, subtitle, keywords and abstract will be typeset in the main language of the paper. The commands \translatedXXX, XXX begin title, subtitle and keywords, can be used to set these elements in the other languages. The environment `translatedabstract` is used to set the translation of the abstract. These commands and environment have a mandatory first argument: the language of the second argument. See `sample-sigconf-i13n.tex` file for examples of their usage.

17 SIGCHI EXTENDED ABSTRACTS

The “sigchi-a” template style (available only in L^AT_EX and not in Word) produces a landscape-orientation formatted article, with a wide left margin. Three environments are available for use with the “sigchi-a” template style, and produce formatted output in the margin:

sidebar: Place formatted text in the margin.

marginfigure: Place a figure in the margin.

margintable: Place a table in the margin.

ACKNOWLEDGMENTS

To Robert, for the bagels and explaining CMYK and color spaces.

455 A RESEARCH METHODS

456 A.1 Part One

457 Lorem ipsum dolor sit amet, consectetur adipiscing elit. Morbi malesuada, quam in pulvinar varius,
458 metus nunc fermentum urna, id sollicitudin purus odio sit amet enim. Aliquam ullamcorper eu
459 ipsum vel mollis. Curabitur quis dictum nisl. Phasellus vel semper risus, et lacinia dolor. Integer
460 ultricies commodo sem nec semper.

461 A.2 Part Two

462 Etiam commodo feugiat nisl pulvinar pellentesque. Etiam auctor sodales ligula, non varius nibh
463 pulvinar semper. Suspendisse nec lectus non ipsum convallis congue hendrerit vitae sapien. Donec
464 at laoreet eros. Vivamus non purus placerat, scelerisque diam eu, cursus ante. Etiam aliquam tortor
465 auctor efficitur mattis.

466 B ONLINE RESOURCES

467 Nam id fermentum dui. Suspendisse sagittis tortor a nulla mollis, in pulvinar ex pretium. Sed
468 interdum orci quis metus euismod, et sagittis enim maximus. Vestibulum gravida massa ut felis
469 suscipit congue. Quisque mattis elit a risus ultrices commodo venenatis eget dui. Etiam sagittis
470 eleifend elementum.

471 Nam interdum magna at lectus dignissim, ac dignissim lorem rhoncus. Maecenas eu arcu ac
472 neque placerat aliquam. Nunc pulvinar massa et mattis lacinia.

473 Received 20 February 2007; revised 12 March 2009; accepted 5 June 2009
