

The `latex-lab-toc-kernel-changes` package

Changes and additions to the kernel related to tagging and links in toc entries

LATEX Project^{*}
Version 0.82 2023-05-20

Abstract

1 Introduction

The followings contains various changes to kernel commands needed for the tagging of table of contents and similar lists.

2 General kernel and class changes

Some of the changes can probably could go into the kernel. This are marked with [kernel?], the other are marked with [latex-lab]. A few changes must be done in the classes. They are marked as [class]. They are inserted with hooks here: this will break if a non-standard class is used.

2.1 Providing the counter representation `\theHxx` generally

[kernel?]

The `\theHxx` representation allows to create a unique representation of a counter that is for example used to create destination names. It will also be needed to add /Ref keys to various tagging structures. It makes therefore sense to provide it by default as soon as a counter is created. The `\@addtoreset` change (taken also from hyperref) tries to ensure the counter stays unique if it is reset.

At first we suppress the patches from hyperref:

```
1  {*kernelchange}
2  \def\hyper@nopatch@counter{}%
3  \def\@definecounter#1{\expandafter\newcount\csname c@\#1\endcsname
4    \setcounter{#1}\z@%
5    \global\expandafter\let\csname cl@\#1\endcsname\empty
6    \@addtoreset{#1}{\@ckpt}%
7    \global\expandafter\let\csname p@\#1\endcsname\empty
8    \expandafter\gdef\csname theH\#1\endcsname{\the\value{#1}}%new
```

*Initial implementation done by Ulrike Fischer

```

9      \expandafter
10     \gdef\csname the#1\expandafter\endcsname\expandafter
11       {\expandafter\@arabic\csname c@#1\endcsname}
12 \def@\addtoreset#1#2{\expandafter\@cons\csname cl@#2\endcsname {{#1}}%
13   \expandafter\gdef\csname theH#1\endcsname{\csname theH#2\endcsname.\the\value{#1}}%
14 }

```

The following counters are defined in the kernel

```

15 \gdef\theHenumi{\the\value{enumi}}
16 \gdef\theHenumii{\the\value{enumii}}
17 \gdef\theHenumiii{\the\value{enumiii}}
18 \gdef\theHenumiv{\the\value{enumiv}}
19 \gdef\theEquation{\the\value{equation}}
20 \gdef\theFootnote{\the\value{footnote}}
21 \gdef\theMpfootnote{\the\value{mpfootnote}}

```

2.2 Providing and updating \@currentHref

[kernel?]

\@currentHref contains the current unique representation of a counter. It is useful also without hyperref as it allows to connect with a /Ref key a toc entry with the heading it refers too. So \refstepcounter is extended to update the command. This is done at the begin so that the hyperref code can still adapt it later (using the cmd/refstepcounter/after hook would be too late, and could also break with cleverref.)

We also provide a kernel version that hyperref doesn't touch and so will never set a target.

```

22 \def@\currentHref{}
23 \def\refstepcounter#1{\stepcounter{#1}%
24   \edef@\currentcounter{#1}%
25   \xdef@\currentHref {\#1.\csname theH#1\endcsname}%
26   \protected@edef@\currentlabel
27     {\csname p@#1\expandafter\endcsname\csname the#1\endcsname}%
28 }
29 \let@\kernel@refstepcounter\refstepcounter

```

2.3 Assigning the headings level numbers

[kernel?]

The code for the toc must be able to compare the level of subsection against section. So some numbers are needed. It uses for now the commands used by hyperref for the bookmark levels. While headings are more a class thing, it could make sense to provide a standard set already in the kernel. The numbers are a bit different to the one in hyperref, but imho sensible.

Note for the future: once that heading stuff is turned into template instances the template should set that number.

```

30 \def\toclevel@document{-10}
31 \def\toclevel@part{-1}
32 \def\toclevel@chapter{0}
33 \def\toclevel@section{1}
34 \def\toclevel@subsection{2}
35 \def\toclevel@subsubsection{3}
36 \def\toclevel@paragraph{4}

```

```

37 \def\toclevel@subparagraph{5}
38 \def\toclevel@figure{1}
39 \def\toclevel@table{1}
40 (/kernelchange)

```

2.4 load kernel changes

```

41 <*package>
42 \RequirePackage{latex-lab-kernel-changes}

```

2.5 \contentsline extension

[latex-lab] The tagging code must add code at the begin and end of \contentsline. This code must have access to the arguments. We set it up as config point for now.

```

43 \def\@contentsline@cfgpoint@before#1#2#3#4{}
44 \def\@contentsline@cfgpoint@after#1#2#3#4{}
45 \def\@contentsline@arg@one{}%level
46 \def\@contentsline@arg@two{}%text
47 \def\@contentsline@arg@three{}%page
48 \def\@contentsline@arg@four{}%destination
49 \def\contentsline#1#2#3#4%
50 {%
51   \def\@contentsline@arg@one{#1}%level
52   \def\@contentsline@arg@two{#2}%text
53   \def\@contentsline@arg@three{#3}%page
54   \def\@contentsline@arg@four{#4}%destination
55   \@contentsline@cfgpoint@before{#1}{#2}{#3}{#4}%
56   \%gdef\@contentsline@destination{#4}%
57   \csname l@#1\endcsname{#2}{#3}%
58   \@contentsline@cfgpoint@after{#1}{#2}{#3}{#4}%
59 }

```

2.6 \addcontentsline changes

[latex-lab]

\addcontentsline should always write the unique counter representation \currentHref so that we can create the /Ref key. At the same time we need a hook, so that hyperref can add its bookmarks code. The generic hook would be ok, but we need the arguments, so we store them first.

```

60 \NewHook{cmd/addcontentsline/before}
61 \def\addcontentsline#1#2#3{%
62   toc extension, type, tag
63   \def\addcontentsline@arg@one{#1}% name??
64   \def\addcontentsline@arg@two{#2}%
65   \def\addcontentsline@arg@three{#3}%
66   \UseHook{cmd/addcontentsline/before}%
67   \addtocontents{#1}{%
68     \protect\contentsline{#2}{#3}{\thepage}{\currentHref}\protected@file@percent
69   }

```

2.7 \starttoc

[kernel?]

We add a configuration point before and after reading the file for the tagging.

```

69 \def\@starttoc@cfgpoint@before#1{%
70 \def\@starttoc@cfgpoint@after#1{%
71 \def\@starttoc#1{%
72   \begingroup
73     \makeatletter
74     \@starttoc@cfgpoint@before{#1}%
75     \@input{\jobname.#1}%
76     \@starttoc@cfgpoint@after{#1}%
77     \if@filesw
78       \expandafter\newwrite\csname tf@#1\endcsname
79       \immediate\openout \csname tf@#1\endcsname \jobname.#1\relax
80     \fi
81     \nobreakfalse
82   \endgroup}
```

2.8 Formatting of the toc entries

2.8.1 Kernel commands

[latex-lab] or [kernel]?]

We need hooks before and after the content and before and after the page number. The number needs some thing so that it can be tagged as label. The text and the page hooks are used in manual \l@xx commands and in \l@xx defined by \dottedtocline or by other means.

```

83 \NewMirroredHookPair{contentsline/number/before}{contentsline/number/after}%
84 \NewMirroredHookPair{contentsline/text/before}{contentsline/text/after}%
85 \NewMirroredHookPair{contentsline/page/before}{contentsline/page/after}%
```

The dot in the leader must be set as artifact. But luatex requires that the mc are set outside the leaders. So we need a config point.

\dottedtocline needs hooks and formatting commands.

```

86 \def\@dottedtocline@cfgpoint@leaders#1{%
87
88 \def\@dottedtocline#1#2#3#4#5{%
89   \ifnum #1>\c@tocdepth \else
90     \vskip \z@ \c@plus .2\p@
91     {\leftskip #2\relax \rightskip \c@tocrmarg \parfillskip -\rightskip
92      \parindent #2\relax \c@afterindenttrue
93      \interlinepenalty\@M
94      \leavevmode
95      \c@tempdima #3\relax
96      \advance\leftskip \c@tempdima \null\nobreak\hskip -\leftskip
97      \UseHook{contentsline/text/before}%
98      \csname contentsline@text@#1@format\endcsname{#4}%
99      \UseHook{contentsline/text/after}%
100     \nobreak
101     \c@dottedtocline@cfgpoint@leaders{%
102       \leaders\hbox{$\m@th
103         \mkern \c@dotsep mu\hbox{.}\mkern \c@dotsep
104         mu$}\hfill}%
105     \nobreak
106     \hb@xt@\c@pnumwidth{\hfil\normalfont \normalcolor}
```

```

107   \UseHook{contentsline/page/before}%
108   #5%
109   \UseHook{contentsline/page/after}%
110   \kern-\p@ \kern\p@}%
111   \par}%
112 \fi}

```

2.8.2 \numberline

[kernel?] Inside or outside the box?

```

113 \def\numberline#1{\hb@xt@{\tempdima{%
114   \UseHook{contentsline/number/before}%
115   #1\hfil
116   \UseHook{contentsline/number/after}%
117 }}}

```

2.8.3 \l@xx in the classes

Depending on the class we have to redefine also more commands For other classes it should be documented what is needed.

```

118 \AddToHook{class/article/after}
119 {
120   \renewcommand*\l@part[2]{%
121     \ifnum \c@tocdepth >-2\relax
122       \addpenalty\@secpenalty
