tagpdf – A package to experiment with pdf tagging[*]

Ulrike Fischer[†]

Released 2024-03-27

Contents

---

[*]This file describes v0.99a, last revised 2024-03-27.
[†]E-mail: fischer@troubleshooting-tex.de

III   The tagpdf-tree module
Commands trees and main dictionaries
Part of the tagpdf package   **59**

IV   The tagpdf-mc-shared module
Code related to Marked Content (mc-chunks), code shared by
all modes
Part of the tagpdf package   **70**

V The **tagpdf-mc-generic** module
Code related to Marked Content (mc-chunks), generic mode
Part of the tagpdf package   77

VI   The **tagpdf-mc-luacode** module
Code related to Marked Content (mc-chunks), luamode-specific
Part of the tagpdf package   91

VII   The **tagpdf-struct** module
Commands to create the structure
Part of the tagpdf package   100

VIII   The **tagpdf-luatex.def** Driver for luatex
Part of the tagpdf package

IX   The **tagpdf-roles** module
Tags, roles and namesspace code
Part of the tagpdf package

X   The **tagpdf-space** module
Code related to real space chars
Part of the tagpdf package

`\tag_stop:`
`\tag_start:`
`\tagstop`
`\tagstart`
	We need commands to stop tagging in some places. They switches three local booleans and also stop the counting of paragraphs. If they are nested an inner `\tag_start:` will not restart tagging.

`\tag_stop:n` `\tag_start:n`	`\tag_stop:n{⟨label⟩}` `\tag_start:n{⟨label⟩}`

The commands with argument allow to give a label. This is only used in debugging messages to allow to follow the nesting.

`activate/spaces␣(setup-key)`

`activate/spaces` activates the additional parsing needed for interword spaces. It replaces the deprecated key `interwordspace`.

`activate/mc␣(setup-key)`
`activate/tree␣(setup-key)`
`activate/struct␣(setup-key)`
`activate/all␣(setup-key)`
`activate-mc␣(deprecated)`
`activate-tree␣(deprecated)`
`activate-struct␣(deprecated)`
`activate-all␣(deprecated)`

Keys to activate the various tagging steps.

`activate/struct-dest␣(setup-key)`
`no-struct-dest␣(deprecated)`

The key allows to suppress the creation of structure destinations

`debug/log␣(setup-key)`	The `debug/log` key takes currently the values `none`, `v`, `vv`, `vvv`, `all`. More details are in `tagpdf-checks`.

`activate/tagunmarked␣(setup-key)`
`tagunmarked␣(deprecated)`

This key allows to set if (in luamode) unmarked text should be marked up as artifact. The initial value is true.

`page/tabsorder␣(setup-key)` `tabsorder␣(deprecated)`	This sets the tabsorder on a page. The values are `row`, `column`, `structure` (default) or `none`. Currently this is set more or less globally. More finer control can be added if needed.

`tagstruct`
`tagstructobj`
`tagabspage`
`tagmcabs`
`tagmcid`
	These are attributes used by the label/ref system.

1 Initialization and test if pdfmanagement is active.

```
1  ⟨@@=tag⟩
2  ⟨*package⟩
3  \ProvidesExplPackage {tagpdf} {2024-03-27} {0.99a}
4    { A package to experiment with pdf tagging }
5
6  \bool_if:nF
7    {
8      \bool_lazy_and_p:nn
9        {\cs_if_exist_p:N \pdfmanagement_if_active_p:}
10       { \pdfmanagement_if_active_p: }
11   }
12   {  %error for now, perhaps warning later.
13     \PackageError{tagpdf}
14       {
15         PDF~resource~management~is~no~active!\MessageBreak
16         tagpdf~will~no~work.
17       }
18       {
19         Activate~it~with \MessageBreak
20         \string\RequirePackage{pdfmanagement-testphase}\MessageBreak
21         \string\DocumentMetadata{<options>}\MessageBreak
22         before~\string\documentclass
23       }
24   }
25 ⟨/package⟩
```

⟨*debug⟩
```
26 \ProvidesExplPackage {tagpdf-debug} {2024-03-27} {0.99a}
27   { debug code for tagpdf }
28 \@ifpackageloaded{tagpdf}{}{\PackageWarning{tagpdf-debug}{tagpdf~not~loaded,~quitting}\endinpu
```
⟨/debug⟩ We map the internal module name "tag" to "tagpdf" in messages.
```
29 ⟨*package⟩
30 \prop_gput:Nnn \g_msg_module_name_prop { tag }{ tagpdf }
31 ⟨/package⟩
```
Debug mode has its special mapping:
```
32 ⟨*debug⟩
33 \prop_gput:Nnn \g_msg_module_type_prop { tag / debug} {}
34 \prop_gput:Nnn \g_msg_module_name_prop { tag / debug }{tagpdf~DEBUG}
35 ⟨/debug⟩
```

2 base package

To avoid to have to test everywhere if tagpdf has been loaded and is active, we define a
base package with dummy functions
```
36 ⟨*base⟩
37 \ProvidesExplPackage {tagpdf-base} {2024-03-27} {0.99a}
38   {part of tagpdf - provide base, no-op versions of the user commands }
39 ⟨/base⟩
```

3 Package options

There are only two documented options to switch for luatex between generic and luamode, TODO try to get rid of them. The option `disabledelayedshipout` is only temporary to be able to debug problem with the new shipout keyword if needed.

```
40 ⟨*package⟩
41 \bool_new:N\g__tag_mode_lua_bool
42 \bool_new:N\g__tag_delayed_shipout_bool
43 \bool_lazy_and:nnT
44   { \bool_if_exist_p:N \l__pdfmanagement_delayed_shipout_bool }
45   { \l__pdfmanagement_delayed_shipout_bool }
46   {
47     \bool_gset_true:N\g__tag_delayed_shipout_bool
48   }
49 \DeclareOption {luamode}  { \sys_if_engine_luatex:T { \bool_gset_true:N \g__tag_mode_lua_bool
50 \DeclareOption {genericmode}{ \bool_gset_false:N\g__tag_mode_lua_bool }
51 \DeclareOption {disabledelayedshipout}{ \bool_gset_false:N\g__tag_delayed_shipout_bool }
52 \ExecuteOptions{luamode}
53 \ProcessOptions
```

4 Packages

To be on the safe side for now, load also the base definitions

```
54 \RequirePackage{tagpdf-base}
55 ⟨/package⟩
```

The no-op version should behave a near enough to the real code as possible, so we define a command which a special in the relevant backends:

```
56 ⟨*base⟩
57 \AddToHook{begindocument}
58  {
59   \str_case:VnF \c_sys_backend_str
60    {
61     { luatex  } { \cs_new_protected:Npn \__tag_whatsits: {} }
62     { dvisvgm } { \cs_new_protected:Npn \__tag_whatsits: {} }
63    }
64    {
65     \cs_new_protected:Npn \__tag_whatsits: {\tex_special:D {} }
66    }
67  }
68 ⟨/base⟩
```

4.1 a LastPage label

See also issue #2 in Accessible-xref

`\__tag_lastpagelabel:`

```
69 ⟨*package⟩
70 \cs_new_protected:Npn \__tag_lastpagelabel:
71  {
72    \legacy_if:nT { @filesw }
73      {
```

```
74        \exp_args:NNne \exp_args:NNe\iow_now:Nn \@auxout
75          {
76            \token_to_str:N \new@label@record
77              {@tag@LastPage}
78              {
79                {abspage} { \int_use:N \g_shipout_readonly_int}
80                {tagmcabs}{ \int_use:N \c@g__tag_MCID_abs_int }
81                {tagstruct}{\int_use:N \c@g__tag_struct_abs_int }
82              }
83          }
84      }
85  }
86
87  \AddToHook{enddocument/afterlastpage}
88    {\__tag_lastpagelabel:}
```

(*End of definition for* `\__tag_lastpagelabel:`.)

5   Variables

`\l__tag_tmpa_tl`
`\l__tag_tmpb_tl`
`\l__tag_get_tmpc_tl`
`\l_tag_get_parent_tmpb_tl`␣␣␣`\l_tag_tmpa_str`
`\l__tag_tmpa_prop`
`\l__tag_tmpa_seq`
`\l__tag_tmpb_seq`
`\l__tag_tmpa_clist`
`\l__tag_tmpa_int`
`\l__tag_tmpa_box`
`\l__tag_tmpb_box`

A few temporary variables

```
89  \tl_new:N    \l__tag_tmpa_tl
90  \tl_new:N    \l__tag_tmpb_tl
91  \tl_new:N    \l__tag_get_tmpc_tl
92  \tl_new:N    \l__tag_get_parent_tmpa_tl
93  \tl_new:N    \l__tag_get_parent_tmpb_tl
94  \str_new:N   \l__tag_tmpa_str
95  \prop_new:N  \l__tag_tmpa_prop
96  \seq_new:N   \l__tag_tmpa_seq
97  \seq_new:N   \l__tag_tmpb_seq
98  \clist_new:N \l__tag_tmpa_clist
99  \int_new:N   \l__tag_tmpa_int
100 \box_new:N   \l__tag_tmpa_box
101 \box_new:N   \l__tag_tmpb_box
```

(*End of definition for* `\l__tag_tmpa_tl` *and others.*)

Attribute lists for the label command. We have a list for mc-related labels, and one for structures.

`\c__tag_property_mc_clist`
`\c_tag_property_struct_clist`

```
102 \clist_const:Nn \c__tag_property_mc_clist      {tagabspage,tagmcabs,tagmcid}
103 \clist_const:Nn \c__tag_property_struct_clist {tagstruct,tagstructobj}
```

(*End of definition for* `\c__tag_property_mc_clist` *and* `\c__tag_property_struct_clist`.)

`\l__tag_loglevel_int`

This integer hold the log-level and so allows to control the messages. TODO: a list which log-level shows what is needed. The current behaviour is quite ad-hoc.

```
104 \int_new:N   \l__tag_loglevel_int
```

(*End of definition for* `\l__tag_loglevel_int`.)

<table>
<tr><td>\g__tag_active_space_bool
\g__tag_active_mc_bool
\g__tag_active_tree_bool
\g__tag_active_struct_bool
\g__tag_active_struct_dest_bool</td><td>These booleans should help to control the global behaviour of tagpdf. Ideally it should more or less do nothing if all are false. The space-boolean controls the interword space code, the mc-boolean activates \tag_mc_begin:n, the tree-boolean activates writing the finish code and the pdfmanagement related commands, the struct-boolean activates the storing of the structure data. In a normal document all should be active, the split is only there for debugging purpose. Structure destination will be activated automatically, but with the boolean struct-dest-boolean one can suppress them. Also we assume currently that they are set only at begin document. But if some control passing over groups are needed they could be perhaps used in a document too. TODO: check if they are used everywhere as needed and as wanted.</td></tr>
</table>

```
105 \bool_new:N \g__tag_active_space_bool
106 \bool_new:N \g__tag_active_mc_bool
107 \bool_new:N \g__tag_active_tree_bool
108 \bool_new:N \g__tag_active_struct_bool
109 \bool_new:N \g__tag_active_struct_dest_bool
110 \bool_gset_true:N \g__tag_active_struct_dest_bool
```

(*End of definition for* \g__tag_active_space_bool *and others.*)

<table>
<tr><td>\l__tag_active_mc_bool
\l__tag_active_struct_bool
\l__tag_active_socket_bool</td><td>These booleans should help to control the *local* behaviour of tagpdf. In some cases it could e.g. be necessary to stop tagging completely. As local booleans they respect groups. TODO: check if they are used everywhere as needed and as wanted.</td></tr>
</table>

```
111 \bool_new:N \l__tag_active_mc_bool
112 \bool_set_true:N \l__tag_active_mc_bool
113 \bool_new:N \l__tag_active_struct_bool
114 \bool_set_true:N \l__tag_active_struct_bool
115 \bool_new:N \l__tag_active_socket_bool
```

(*End of definition for* \l__tag_active_mc_bool, \l__tag_active_struct_bool, *and* \l__tag_active_-socket_bool.)

<table>
<tr><td>\g__tag_tagunmarked_bool</td><td>This boolean controls if the code should try to automatically tag parts not in mc-chunk. It is currently only used in luamode. It would be possible to used it in generic mode, but this would create quite a lot empty artifact mc-chunks.</td></tr>
</table>

```
116 \bool_new:N \g__tag_tagunmarked_bool
```

(*End of definition for* \g__tag_tagunmarked_bool.)

6 Variants of l3 commands

```
117 \prg_generate_conditional_variant:Nnn \pdf_object_if_exist:n {e}{T,F,TF}
118 \cs_generate_variant:Nn \pdf_object_ref:n {e}
119 \cs_generate_variant:Nn \pdfannot_dict_put:nnn {nne}
120 \cs_generate_variant:Nn \pdffile_embed_stream:nnn {nee,oee}
121 \cs_generate_variant:Nn \prop_gput:Nnn {Nee,Nen} %** unneeded
122 \cs_generate_variant:Nn \prop_put:Nnn   {Nee}     %** unneeded
123 \cs_generate_variant:Nn \prop_item:Nn {No,Ne}     %**  unneeded
124 \cs_generate_variant:Nn \seq_set_split:Nnn{Nne}   %**  unneeded
125 \cs_generate_variant:Nn \str_set_convert:Nnnn {Nonn, Noon, Nnon }
126 \cs_generate_variant:Nn \clist_map_inline:nn {on}
```

7 Label and Reference commands

To ease transition to properties we setup internal definition. They can be replaced by the property definitions once that is released. ** do it!

At first a command to define new properties

```
127    \cs_new_eq:NN \__tag_property_new:nnnn \property_new:nnnn
```

For the non-shipout code we need also the option to reset property

```
128    \cs_new_eq:NN \__tag_property_gset:nnnn \property_gset:nnnn
```

The command to reference while giving a local default.

```
129    \cs_new_eq:NN \__tag_property_ref:nnn \property_ref:nnn
130    \cs_new_eq:NN \__tag_property_ref:nn \property_ref:nn
```

The command to record

```
131    \cs_new_protected:Npn \__tag_property_record:nn #1#2
132      {
133        \@bsphack
134        \property_record:nn{#1}{#2}
135        \@esphack
136      }
137
```

And a few variants

```
138  \cs_generate_variant:Nn \__tag_property_ref:nnn {enn}
139  \cs_generate_variant:Nn \__tag_property_ref:nn {en}
140  \cs_generate_variant:Nn \__tag_property_record:nn {en,eV}
```

(*End of definition for* __tag_property_new:nnnn *,* __tag_property_gset:nnnn *, and* __tag_property_-
ref:nnn.)

A command to retrieve the lastpage label, this will be adapted when there is a proper, kernel lastpage label.

```
141  \cs_new:Npn \__tag_property_ref_lastpage:nn #1 #2
142    {
143      \__tag_property_ref:nnn {@tag@LastPage}{#1}{#2}
144    }
```

(*End of definition for* __tag_property_ref_lastpage:nn.*)

8 Setup label attributes

This are attributes used by the label/ref system. With structures we store the structure number tagstruct and the object reference tagstructobj. The second is needed to be able to reference a structure which hasn't been created yet. The alternative would be to create the object in such cases, but then we would have to check the object existence all the time.

With mc-chunks we store the absolute page number tagabspage, the absolute id tagmcabc, and the id on the page tagmcid.

```
145  \__tag_property_new:nnnn
146    { tagstruct } { now }
147    {0} { \int_use:N \c@g__tag_struct_abs_int }
148  \__tag_property_new:nnnn  { tagstructobj } { now }  {}
149    {
```

```
150     \pdf_object_if_exist:eT {__tag/struct/\int_use:N \c@g__tag_struct_abs_int}
151       {
152         \pdf_object_ref:e{__tag/struct/\int_use:N \c@g__tag_struct_abs_int}
153       }
154   }
155 \__tag_property_new:nnnn
156   { tagabspage } { shipout }
157   {0} { \int_use:N \g_shipout_readonly_int }
158 \__tag_property_new:nnnn  { tagmcabs } { now }
159   {0} { \int_use:N \c@g__tag_MCID_abs_int }
160
161 \flag_new:n { __tag/mcid }
162 \__tag_property_new:nnnn  {tagmcid } { shipout }
163   {0} { \flag_height:n { __tag/mcid } }
164
```

(*End of definition for* `tagstruct` *and others. These functions are documented on page 6.*)

9 Commands to fill seq and prop

With most engines these are simply copies of the expl3 commands, but luatex will over-write them, to store the data also in lua tables.

__tag_prop_new:N
__tag_prop_new_linked:N
__tag_seq_new:N
__tag_prop_gput:Nnn
__tag_seq_gput_right:Nn
__tag_seq_item:cn
__tag_prop_item:cn
__tag_seq_show:N
__tag_prop_show:N

```
165 \cs_set_eq:NN \__tag_prop_new:N         \prop_new:N
166 \cs_set_eq:NN \__tag_prop_new_linked:N \prop_new_linked:N
167 \cs_set_eq:NN \__tag_seq_new:N          \seq_new:N
168 \cs_set_eq:NN \__tag_prop_gput:Nnn      \prop_gput:Nnn
169 \cs_set_eq:NN \__tag_seq_gput_right:Nn \seq_gput_right:Nn
170 \cs_set_eq:NN \__tag_seq_item:cn        \seq_item:cn
171 \cs_set_eq:NN \__tag_prop_item:cn       \prop_item:cn
172 \cs_set_eq:NN \__tag_seq_show:N         \seq_show:N
173 \cs_set_eq:NN \__tag_prop_show:N        \prop_show:N
174 % cnx temporary needed for latex-lab-graphic code
175 \cs_generate_variant:Nn \__tag_prop_gput:Nnn      { Nen , Nee , Nne , cnn, cen, cne, cno, cnx}
176 \cs_generate_variant:Nn \__tag_seq_gput_right:Nn { Ne  , No, cn, ce }
177 \cs_generate_variant:Nn \__tag_prop_new:N   { c }
178 \cs_generate_variant:Nn \__tag_seq_new:N    { c }
179 \cs_generate_variant:Nn \__tag_seq_show:N   { c }
180 \cs_generate_variant:Nn \__tag_prop_show:N  { c }
181 ⟨/package⟩
```

(*End of definition for* `\__tag_prop_new:N` *and others.*)

10 General tagging commands

\tag_stop:
\tag_start:
\tag_stop:n
\tag_start:n

We need commands to stop tagging in some places. They switch local booleans and also stop the counting of paragraphs. The commands keep track of the nesting with a local counter. Tagging only is only restarted at the outer level, if the current level is 1. The commands with argument allow to give a label. This is only used in debugging messages to allow to follow the nesting.

When stop/start pairs are nested we do not want the inner start command to restart tagging. To control this we use a local int: The stop command will increase it. The starting will decrease it and only restart tagging, if it is zero. This will replace the label version.

\l__tag_tag_stop_int

```
182 ⟨*package | debug⟩
183 ⟨package⟩\int_new:N \l__tag_tag_stop_int

184 \cs_set_protected:Npn \tag_stop:
185   {
186 ⟨debug⟩      \msg_note:nne {tag / debug }{tag-stop}{ \int_use:N \l__tag_tag_stop_int }
187     \int_incr:N \l__tag_tag_stop_int
188     \bool_set_false:N \l__tag_active_struct_bool
189     \bool_set_false:N \l__tag_active_mc_bool
190     \bool_set_false:N \l__tag_active_socket_bool
191     \__tag_stop_para_ints:
192   }
193 \cs_set_protected:Npn \tag_start:

11   Keys for tagpdfsetup

TODO: the log-levels must be sorted

<div style="float:left">

activate/mc␣(setup-key)
activate/tree␣(setup-key)
activate/struct␣(setup-key)
activate/all␣(setup-key)
activate/struct-dest␣(setup-key)

</div>

Keys to (globally) activate tagging. `activate/spaces` activates the additional parsing needed for interword spaces. It is defined in tagpdf-space. `activate/struct-dest` allows to activate or suppress structure destinations.

```
237 ⟨*package⟩
238 \keys_define:nn { __tag / setup }
239   {
240     activate/mc      .bool_gset:N = \g__tag_active_mc_bool,
241     activate/tree    .bool_gset:N = \g__tag_active_tree_bool,
242     activate/struct  .bool_gset:N = \g__tag_active_struct_bool,
243     activate/all     .meta:n =
244       {activate/mc={#1},activate/tree={#1},activate/struct={#1}},
245     activate/all   .default:n = true,
246     activate/struct-dest .bool_gset:N = \g__tag_active_struct_dest_bool,
```
old, deprecated names
```
247     activate-mc      .bool_gset:N = \g__tag_active_mc_bool,
248     activate-tree    .bool_gset:N = \g__tag_active_tree_bool,
249     activate-struct  .bool_gset:N = \g__tag_active_struct_bool,
250     activate-all     .meta:n =
251       {activate/mc={#1},activate/tree={#1},activate/struct={#1}},
252     activate-all   .default:n = true,
253     no-struct-dest .bool_gset_inverse:N = \g__tag_active_struct_dest_bool,
```

(*End of definition for* activate/mc (setup-key) *and others. These functions are documented on page 6.*)

<div style="float:left">

debug/show␣(setup-key)

</div>

Subkeys/values are defined in various other places.

```
254     debug/show              .choice:,
```

(*End of definition for* debug/show (setup-key). *This function is documented on page* **??**.)

<div style="float:left">

debug/log␣(setup-key)
debug/uncompress␣(setup-key)
log␣(deprecated)
uncompress␣(deprecated)

</div>

The `log` takes currently the values `none`, `v`, `vv`, `vvv`, `all`. The description of the log levels is in tagpdf-checks.

```
255     debug/log               .choice:,
256     debug/log / none        .code:n = {\int_set:Nn \l__tag_loglevel_int { 0 }},
257     debug/log / v           .code:n =
258       {
259         \int_set:Nn \l__tag_loglevel_int { 1 }
260         \cs_set_protected:Nn \__tag_check_typeout_v:n { \iow_term:e {##1} }
261       },
262     debug/log / vv          .code:n = {\int_set:Nn \l__tag_loglevel_int { 2 }},
```

14

```
263    debug/log / vvv        .code:n = {\int_set:Nn \l__tag_loglevel_int { 3 }},
264    debug/log / all        .code:n = {\int_set:Nn \l__tag_loglevel_int { 10 }},
265    debug/uncompress .code:n = { \pdf_uncompress:  },
```

deprecated but still needed as the documentmetadata key argument uses it.

```
266    log               .meta:n = {debug/log={#1}},
267    uncompress        .code:n = { \pdf_uncompress:  },
```

(*End of definition for* debug/log *(setup-key) and others. These functions are documented on page* 6.)

activate/tagunmarked␣(setup-key)   This key allows to set if (in luamode) unmarked text should be marked up as artifact.
tagunmarked␣(deprecated)   The initial value is true.

```
268    activate/tagunmarked       .bool_gset:N = \g__tag_tagunmarked_bool,
269    activate/tagunmarked       .initial:n  = true,
```

deprecated name

```
270    tagunmarked .bool_gset:N = \g__tag_tagunmarked_bool,
```

(*End of definition for* activate/tagunmarked *(setup-key) and* tagunmarked *(deprecated). These functions are documented on page* 6.)

page/tabsorder␣(setup-key)   This sets the tabsorder on a page. The values are row, column, structure (default)
tabsorder␣(deprecated)   or none. Currently this is set more or less globally. More finer control can be added if
needed.

```
271    page/tabsorder        .choice:,
272    page/tabsorder / row        .code:n =
273      \pdfmanagement_add:nnn { Page } {Tabs}{/R},
274    page/tabsorder / column     .code:n =
275      \pdfmanagement_add:nnn { Page } {Tabs}{/C},
276    page/tabsorder / structure .code:n =
277      \pdfmanagement_add:nnn { Page } {Tabs}{/S},
278    page/tabsorder / none       .code:n =
279      \pdfmanagement_remove:nn {Page} {Tabs},
280    page/tabsorder        .initial:n = structure,
```

deprecated name

```
281    tabsorder .meta:n = {page/tabsorder={#1}},
282  }
```

(*End of definition for* page/tabsorder *(setup-key) and* tabsorder *(deprecated). These functions are documented on page* 6.)

12   loading of engine/more dependent code

```
283 \sys_if_engine_luatex:T
284   {
285     \file_input:n {tagpdf-luatex.def}
286   }

⟨/debug⟩

Part I

The **tagpdf-checks** module
Messages and check code
Part of the tagpdf package

1 Commands

`\tag_if_active_p:` ⋆
`\tag_if_active:TF` ⋆

This command tests if tagging is active. It only gives true if all tagging has been activated, *and* if tagging hasn't been stopped locally.

`\tag_get:n` ⋆ `\tag_get:n{⟨keyword⟩}`

This is a generic command to retrieve data for the current structure or mc-chunk. Currently the only sensible values for the argument ⟨*keyword*⟩ are `mc_tag`, `struct_tag`, `struct_id` and `struct_num`.

`\tag_if_box_tagged_p:N` ⋆ `\tag_if_box_tagged:N{⟨box⟩}`
`\tag_if_box_tagged:NTF` ⋆

This tests if a box contains tagging commands. It relies currently on that the code, that saved the box, correctly sets the command `\l_tag_box_\int_use:N #1_tl` to a positive value. The LaTeX commands will do that automatically at some time but it is in the responsability of the user to ensure that when using low-level code. If the internal command doesn't exist the box is assumed to be untagged.

2 Description of log messages

2.1 \ShowTagging command

Argument	type	note
\ShowTaggingmc-data = num	log+term	lua-only
\ShowTaggingmc-current	log+term	
\ShowTaggingstruck-stack= [log|show]	log or term+stop	
\ShowTaggingdebug/structures = num	log+termn	debug mode only

2.3 Messages from the ptagging code

A few messages are issued in generic mode from the code which reinserts missing TMB/TME. This is currently done if log-level is larger than zero. TODO: reconsider log-level and messages when this code settles down.

2.4 Warning messages from the lua-code

The messages are triggered if the log-level is at least equal to the number.

message	log-level	remark
WARN TAG-NOT-TAGGED:	1	
WARN TAG-OPEN-MC:	1	
WARN SHIPOUT-MC-OPEN:	1	
WARN SHIPOUT-UPS:	0	shouldn't happen
WARN TEX-MC-INSERT-MISSING:	0	shouldn't happen
WARN TEX-MC-INSERT-NO-KIDS:	2	e.g. from empty hbox

2.5 Info messages from the lua-code

The messages are triggered if the log-level is at least equal to the number. `TAG` messages are from the traversing function, `TEX` from code used in the tagpdf-mc module. `PARENTREE` is the code building the parenttree.

message	log-level	remark

2.6 Debug mode messages and code

If the package tagpdf-debug is loaded a number of commands are redefined and enhanced with additional commands which can be used to output debug messages or collect statistics. The commands are present but do nothing if the log-level is zero.

command	name	action	remark
\tag_mc_begin:n	mc-begin-insert	msg	
	mc-begin-ignore	msg	if inactive

2.7 Messages

mc-nested mc-tag-missing mc-label-unknown mc-used-twice mc-not-open mc-pushed mc-popped mc-current	Various messages related to mc-chunks. TODO document their meaning.

struct-unknown struct-no-objnum struct-orphan struct-faulty-nesting struct-missing-tag struct-used-twice struct-label-unknown struct-show-closing	Various messages related to structure. Check the definition in the code for their meaning and the arguments they take.
tree-struct-still-open	Message issued at the end of the compilation if there are (beside Root) other open structures on the stack.
tree-statistic	Message issued at the end of the compilation showing the number of objects to write
show-struct show-kids	These two messages are used in debug mode to show the current structures in the log and terminal.
attr-unknown	Message if an attribute i sunknown.
role-missing role-unknown role-unknown-tag role-unknown-NS role-tag new-tag role-parent-child role-remapping	Messages related to role mapping.
tree-mcid-index-wrong	Used in the tree code, typically indicates the document must be rerun.
sys-no-interwordspace	Message if an engine doesn't support inter word spaces
para-hook-count-wrong	Message if the number of begin paragraph and end paragraph differ. This normally means faulty structure.

3 Messages

3.1 Messages related to mc-chunks

mc-nested   This message is issue is a mc is opened before the previous has been closed. This is not relevant for luamode, as the attributes don't care about this. It is used in the `\@@_check_mc_if_nested:` test.

```
6 ⟨*package⟩
7 \msg_new:nnn { tag } {mc-nested} { nested~marked~content~found~-~mcid~#1 }
```

(*End of definition for* `mc-nested`*. This function is documented on page 19.*)

mc-tag-missing   If the tag is missing

```
8 \msg_new:nnn { tag } {mc-tag-missing} { required~tag~missing~-~mcid~#1 }
```

(*End of definition for* `mc-tag-missing`*. This function is documented on page 19.*)

mc-label-unknown   If the label of a mc that is used in another place is not known (yet) or has been undefined as the mc was already used.

```
9 \msg_new:nnn { tag } {mc-label-unknown}
10   { label~#1~unknown~or~has~been~already~used.\\
11     Either~rerun~or~remove~one~of~the~uses. }
```

(*End of definition for* `mc-label-unknown`*. This function is documented on page 19.*)

mc-used-twice   An mc-chunk can be inserted only in one structure. This indicates wrong coding and so should at least give a warning.

```
12 \msg_new:nnn { tag } {mc-used-twice} { mc~#1~has~been~already~used }
```

(*End of definition for* `mc-used-twice`*. This function is documented on page 19.*)

mc-not-open   This is issued if a `\tag_mc_end:` is issued wrongly, wrong coding.

```
13 \msg_new:nnn { tag } {mc-not-open} { there~is~no~mc~to~end~at~#1 }
```

(*End of definition for* `mc-not-open`*. This function is documented on page 19.*)

mc-pushed
mc-popped   Informational messages about mc-pushing.

```
14 \msg_new:nnn { tag } {mc-pushed} { #1~has~been~pushed~to~the~mc~stack}
15 \msg_new:nnn { tag } {mc-popped} { #1~has~been~removed~from~the~mc~stack }
```

(*End of definition for* `mc-pushed` *and* `mc-popped`*. These functions are documented on page 19.*)

mc-current   Informational messages about current mc state.

```
16 \msg_new:nnn { tag } {mc-current}
17   { current~MC:~
18     \bool_if:NTF\g__tag_in_mc_bool
19       {abscnt=\__tag_get_mc_abs_cnt:,~tag=\g__tag_mc_key_tag_tl}
20       {no~MC~open,~current~abscnt=\__tag_get_mc_abs_cnt:"}
21   }
```

(*End of definition for* `mc-current`*. This function is documented on page 19.*)

3.2 Messages related to structures

struct-unknown if for example a parent key value points to structure that doesn't exist (yet)

```
22 \msg_new:nnn { tag } {struct-unknown}
23     { structure~with~number~#1~doesn't~exist\\ #2 }
```

(*End of definition for* struct-unknown. *This function is documented on page 20.*)

struct-no-objnum Should not happen . . .

```
24 \msg_new:nnn { tag } {struct-no-objnum} { objnum~missing~for~structure~#1 }
```

(*End of definition for* struct-no-objnum. *This function is documented on page 20.*)

struct-orphan This indicates that there is a structure which has kids but no parent. This can happen if a structure is stashed but then not used.

```
25 \msg_new:nnn { tag } {struct-orphan}
26   {
27     Structure~#1~has~#2~kids~but~no~parent.\\
28     It~is~turned~into~an~artifact.\\
29     Did~you~stashed~a~structure~and~then~didn't~use~it?
30   }
31
```

(*End of definition for* struct-orphan. *This function is documented on page 20.*)

struct-faulty-nesting This indicates that there is somewhere one \tag_struct_end: too much. This should be normally an error.

```
32 \msg_new:nnn { tag }
33   {struct-faulty-nesting}
34   { there~is~no~open~structure~on~the~stack }
```

(*End of definition for* struct-faulty-nesting. *This function is documented on page 20.*)

struct-missing-tag A structure must have a tag.

```
35 \msg_new:nnn { tag } {struct-missing-tag} { a~structure~must~have~a~tag! }
```

(*End of definition for* struct-missing-tag. *This function is documented on page 20.*)

struct-used-twice

```
36 \msg_new:nnn { tag } {struct-used-twice}
37   { structure~with~label~#1~has~already~been~used}
```

(*End of definition for* struct-used-twice. *This function is documented on page 20.*)

struct-label-unknown label is unknown, typically needs a rerun.

```
38 \msg_new:nnn { tag } {struct-label-unknown}
39   { structure~with~label~#1~is~unknown~rerun}
```

(*End of definition for* struct-label-unknown. *This function is documented on page 20.*)

struct-show-closing Informational message shown if log-mode is high enough

```
40 \msg_new:nnn { tag } {struct-show-closing}
41   { closing~structure~#1~tagged~\use:e{\prop_item:cn{g__tag_struct_#1_prop}{S}} }
```

(*End of definition for* struct-show-closing. *This function is documented on page 20.*)

tree-struct-still-open Message issued at the end if there are beside Root other open structures on the stack.

```
42 \msg_new:nnn { tag } {tree-struct-still-open}
43   {
44     There~are~still~open~structures~on~the~stack!\\
45     The~stack~contains~\seq_use:Nn\g__tag_struct_tag_stack_seq{,}.\\
46     The~structures~are~automatically~closed,\\
47     but~their~nesting~can~be~wrong.
48   }
```

(*End of definition for* `tree-struct-still-open`. *This function is documented on page 20.*)

tree-statistic Message issued at the end showing the estimated number of structures and MC-childs

```
49 \msg_new:nnn { tag } {tree-statistic}
50   {
51     Finalizing~the~tagging~structure:\\
52     Writing~out~\c_tilde_str
53     \int_use:N\c@g__tag_struct_abs_int\c_space_tl~structure~objects\\
54     with~\c_tilde_str
55     \int_use:N\c@g__tag_MCID_abs_int\c_space_tl'MC'~leaf~nodes.\\
56     Be~patient~if~there~are~lots~of~objects!
57   }
58 ⟨/package⟩
```

(*End of definition for* `tree-statistic`. *This function is documented on page 20.*)

The following messages are only needed in debug mode.

show-struct
show-kids This two messages are used to show the current structures in the log and terminal.

```
59 ⟨*debug⟩
60 \msg_new:nnn { tag/debug } { show-struct }
61   {
62     =========================\\
63     The~structure~#1~
64     \tl_if_empty:nTF {#2}
65       { is~empty \\>~ . }
66       { contains: #2  }
67     \\
68   }
69 \msg_new:nnn { tag/debug } { show-kids }
70   {
71     The~structure~has~the~following~kids:
72     \tl_if_empty:nTF {#2}
73       { \\>~ NONE }
74       { #2  }
75     \\
76     =========================
77   }
78 ⟨/debug⟩
```

(*End of definition for* `show-struct` *and* `show-kids`. *These functions are documented on page 20.*)

3.3 Attributes

Not much yet, as attributes aren't used so much.

attr-unknown

```
79 ⟨*package⟩
80 \msg_new:nnn { tag } {attr-unknown}  { attribute~#1~is~unknown}
```

(*End of definition for* attr-unknown. *This function is documented on page 20.*)

3.4 Roles

role-missing   Warning message if either the tag or the role is missing
role-unknown
role-unknown-tag
role-unknown-NS

```
81 \msg_new:nnn { tag } {role-missing}     { tag~#1~has~no~role~assigned  }
82 \msg_new:nnn { tag } {role-unknown}     { role~#1~is~not~known  }
83 \msg_new:nnn { tag } {role-unknown-tag} { tag~#1~is~not~known  }
84 \msg_new:nnn { tag } {role-unknown-NS}  { \tl_if_empty:nTF{#1}{Empty~NS}{NS~#1~is~not~known} }
```

(*End of definition for* role-missing *and others. These functions are documented on page 20.*)

role-parent-child   This is info and warning message about the containment rules between child and parent tags.

```
85 \msg_new:nnn { tag } {role-parent-child}
86   { Parent-Child~'#1'~-->~'#2'.\\Relation~is~#3~\msg_line_context:}
```

(*End of definition for* role-parent-child. *This function is documented on page 20.*)

role-remapping   This is info and warning message about role-remapping

```
87 \msg_new:nnn { tag } {role-remapping}
88   { remapping~tag~to~#1 }
```

(*End of definition for* role-remapping. *This function is documented on page 20.*)

role-tag   Info messages.
new-tag

```
89 \msg_new:nnn { tag } {role-tag}        { mapping~tag~#1~to~role~#2  }
90 \msg_new:nnn { tag } {new-tag}         { adding~new~tag~#1 }
91 \msg_new:nnn { tag } {read-namespace}  { reading~namespace~definitions~tagpdf-ns-
   #1.def }
92 \msg_new:nnn { tag } {namespace-missing}{ namespace~definitions~tagpdf-ns-#1.def~not~found }
93 \msg_new:nnn { tag } {namespace-unknown}{ namespace~#1~is~not~declared }
```

(*End of definition for* role-tag *and* new-tag. *These functions are documented on page 20.*)

3.5 Miscellaneous

tree-mcid-index-wrong   Used in the tree code, typically indicates the document must be rerun.

```
94 \msg_new:nnn { tag } {tree-mcid-index-wrong}
95   {something~is~wrong~with~the~mcid--rerun}
```

(*End of definition for* tree-mcid-index-wrong. *This function is documented on page 20.*)

sys-no-interwordspace   Currently only pdflatex and lualatex have some support for real spaces.

```
96 \msg_new:nnn { tag } {sys-no-interwordspace}
97   {engine/output~mode~#1~doesn't~support~the~interword~spaces}
```

(*End of definition for* sys-no-interwordspace. *This function is documented on page 20.*)

`\__tag_check_typeout_v:n`   A simple logging function. By default is gobbles its argument, but the log-keys sets it to typeout.

```
98 \cs_set_eq:NN \__tag_check_typeout_v:n \use_none:n
```

(*End of definition for* `\__tag_check_typeout_v:n`.)

para-hook-count-wrong   At the end of the document we check if the count of para-begin and para-end is identical. If not we issue a warning: this is normally a coding error and and breaks the structure.

```
99 \msg_new:nnnn { tag } {para-hook-count-wrong}
100    {The~number~of~automatic~begin~(#1)~and~end~(#2)~#3~para~hooks~differ!}
101    {This~quite~probably~a~coding~error~and~the~structure~will~be~wrong!}
102 ⟨/package⟩
```

(*End of definition for* para-hook-count-wrong. *This function is documented on page 20.*)

4   Retrieving data

`\tag_get:n`   This retrieves some data. This is a generic command to retrieve data. Currently the only sensible values for the argument are `mc_tag`, `struct_tag` and `struct_num`.

```
103 ⟨base⟩\cs_new:Npn \tag_get:n #1   { \use:c {__tag_get_data_#1: } }
```

(*End of definition for* `\tag_get:n`. *This function is documented on page 17.*)

5   User conditionals

`\tag_if_active_p:`   This tests if tagging is active. This allows packages to add conditional code. The test is
`\tag_if_active:TF`   true if all booleans, the global and the two local one are true.

```
104 ⟨*base⟩
105 \prg_new_conditional:Npnn \tag_if_active: { p , T , TF, F }
106    { \prg_return_false: }
107 ⟨/base⟩
108 ⟨*package⟩
109 \prg_set_conditional:Npnn \tag_if_active: { p , T , TF, F }
110    {
111       \bool_lazy_all:nTF
112         {
113           {\g__tag_active_struct_bool}
114           {\g__tag_active_mc_bool}
115           {\g__tag_active_tree_bool}
116           {\l__tag_active_struct_bool}
117           {\l__tag_active_mc_bool}
118         }
119         {
120           \prg_return_true:
121         }
122         {
123           \prg_return_false:
124         }
125    }
126 ⟨/package⟩
```

(*End of definition for* `\tag_if_active:TF`. *This function is documented on page 17.*)

`\tag_if_box_tagged_p:N`
`\tag_if_box_tagged:NTF` This tests if a box contains tagging commands. It relies on that the code that saved the box correctly set `\l_tag_box_<box number>_tl` to a positive value. The LaTeX commands will do that automatically at some time but it is in the responsability of the user to ensure that when using low-level code. If the internal command doesn't exist the box is assumed to be untagged.

```
127 ⟨*base⟩
128 \prg_new_conditional:Npnn \tag_if_box_tagged:N #1 {p,T,F,TF}
129    {
130      \tl_if_exist:cTF {l_tag_box_\int_use:N #1_tl}
131      {
132        \int_compare:nNnTF {0\tl_use:c{l_tag_box_\int_use:N #1_tl}}>{0}
133        { \prg_return_true:  }
134        { \prg_return_false: }
135      }
136      {
137        \prg_return_false:
138        % warning??
139      }
140    }
141 ⟨/base⟩
```

(*End of definition for* `\tag_if_box_tagged:NTF`. *This function is documented on page 17.*)

6 Internal checks

These are checks used in various places in the code.

6.1 checks for active tagging

`\__tag_check_if_active_mc:TF` This checks if mc are active.
`\__tag_check_if_active_struct:TF`
```
142 ⟨*package⟩
143 \prg_new_conditional:Npnn \__tag_check_if_active_mc: {T,F,TF}
144   {
145     \bool_lazy_and:nnTF { \g__tag_active_mc_bool } { \l__tag_active_mc_bool }
146       {
147         \prg_return_true:
148       }
149       {
150         \prg_return_false:
151       }
152   }
153 \prg_new_conditional:Npnn \__tag_check_if_active_struct: {T,F,TF}
154   {
155     \bool_lazy_and:nnTF { \g__tag_active_struct_bool } { \l__tag_active_struct_bool }
156       {
157         \prg_return_true:
158       }
159       {
160         \prg_return_false:
161       }
162   }
```

(*End of definition for* `\__tag_check_if_active_mc:TF` *and* `\__tag_check_if_active_struct:TF`.)

6.2 Checks related to structures

__tag_check_structure_has_tag:n

Structures must have a tag, so we check if the S entry is in the property. It is an error if this is missing. The argument is a number. The tests for existence and type is split in structures, as the tags are stored differently to the mc case.

```
163 \cs_new_protected:Npn \__tag_check_structure_has_tag:n #1 %#1 struct num
164   {
165     \prop_if_in:cnF { g__tag_struct_#1_prop }
166       {S}
167       {
168         \msg_error:nn { tag } {struct-missing-tag}
169       }
170   }
```

(*End of definition for* __tag_check_structure_has_tag:n.)

__tag_check_structure_tag:N

This checks if the name of the tag is known, either because it is a standard type or has been rolemapped.

```
171 \cs_new_protected:Npn \__tag_check_structure_tag:N #1
172   {
173     \prop_if_in:NoF \g__tag_role_tags_NS_prop {#1}
174       {
175         \msg_warning:nne { tag } {role-unknown-tag} {#1}
176       }
177   }
```

(*End of definition for* __tag_check_structure_tag:N.)

__tag_check_info_closing_struct:n

This info message is issued at a closing structure, the use should be guarded by log-level.

```
178 \cs_new_protected:Npn \__tag_check_info_closing_struct:n #1 %#1 struct num
179   {
180     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
181       {
182         \msg_info:nnn { tag } {struct-show-closing} {#1}
183       }
184   }
185
186 \cs_generate_variant:Nn \__tag_check_info_closing_struct:n {o,e}
```

(*End of definition for* __tag_check_info_closing_struct:n.)

__tag_check_no_open_struct:

This checks if there is an open structure. It should be used when trying to close a structure. It errors if false.

```
187 \cs_new_protected:Npn \__tag_check_no_open_struct:
188   {
189     \msg_error:nn { tag } {struct-faulty-nesting}
190   }
```

(*End of definition for* __tag_check_no_open_struct:.)

__tag_check_struct_used:n

This checks if a stashed structure has already been used.

```
191 \cs_new_protected:Npn \__tag_check_struct_used:n #1 %#1 label
192   {
193     \prop_get:cnNT
194       {g__tag_struct_\__tag_property_ref:enn{tagpdfstruct-#1}{tagstruct}{unknown}_prop}
```

```
195        {P}
196        \l__tag_tmpa_tl
197        {
198          \msg_warning:nnn { tag } {struct-used-twice} {#1}
199        }
200    }
```

(*End of definition for* `\__tag_check_struct_used:n`.)

6.3   Checks related to roles

`\__tag_check_add_tag_role:nn`   This check is used when defining a new role mapping.

```
201 \cs_new_protected:Npn \__tag_check_add_tag_role:nn #1 #2 %#1 tag, #2 role
202    {
203      \tl_if_empty:nTF {#2}
204        {
205          \msg_error:nnn { tag } {role-missing} {#1}
206        }
207        {
208          \prop_get:NnNTF \g__tag_role_tags_NS_prop {#2} \l_tmpa_tl
209            {
210              \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
211                {
212                  \msg_info:nnnn { tag } {role-tag} {#1} {#2}
213                }
214            }
215            {
216              \msg_error:nnn { tag } {role-unknown} {#2}
217            }
218        }
219    }
```

Similar with a namespace

```
220 \cs_new_protected:Npn \__tag_check_add_tag_role:nnn #1 #2 #3 %#1 tag/NS, #2 role #3 namespace
221    {
222      \tl_if_empty:nTF {#2}
223        {
224          \msg_error:nnn { tag } {role-missing} {#1}
225        }
226        {
227          \prop_get:cnNTF { g__tag_role_NS_#3_prop } {#2} \l_tmpa_tl
228            {
229              \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
230                {
231                  \msg_info:nnnn { tag } {role-tag} {#1} {#2/#3}
232                }
233            }
234            {
235              \msg_error:nnn { tag } {role-unknown} {#2/#3}
236            }
237        }
238    }
```

(*End of definition for* `\__tag_check_add_tag_role:nn`.)

6.4 Check related to mc-chunks

__tag_check_mc_if_nested:
__tag_check_mc_if_open:

Two tests if a mc is currently open. One for the true (for begin code), one for the false part (for end code).

```
239 \cs_new_protected:Npn \__tag_check_mc_if_nested:
240   {
241     \__tag_mc_if_in:T
242       {
243         \msg_warning:nne { tag } {mc-nested} { \__tag_get_mc_abs_cnt: }
244       }
245   }
246
247 \cs_new_protected:Npn \__tag_check_mc_if_open:
248   {
249     \__tag_mc_if_in:F
250       {
251         \msg_warning:nne { tag } {mc-not-open} { \__tag_get_mc_abs_cnt: }
252       }
253   }
```

(*End of definition for* __tag_check_mc_if_nested: *and* __tag_check_mc_if_open:.)

__tag_check_mc_pushed_popped:nn

This creates an information message if mc's are pushed or popped. The first argument is a word (pushed or popped), the second the tag name. With larger log-level the stack is shown too.

```
254 \cs_new_protected:Npn \__tag_check_mc_pushed_popped:nn #1 #2
255   {
256     \int_compare:nNnT
257       { \l__tag_loglevel_int } =( 2 }
258       { \msg_info:nne {tag}{mc-#1}{#2} }
259     \int_compare:nNnT
260       { \l__tag_loglevel_int } > { 2 }
261       {
262         \msg_info:nne {tag}{mc-#1}{#2}
263         \seq_log:N \g__tag_mc_stack_seq
264       }
265   }
```

(*End of definition for* __tag_check_mc_pushed_popped:nn.)

__tag_check_mc_tag:N

This checks if the mc has a (known) tag.

```
266 \cs_new_protected:Npn \__tag_check_mc_tag:N #1  %#1 is var with a tag name in it
267   {
268     \tl_if_empty:NT #1
269       {
270         \msg_error:nne { tag } {mc-tag-missing} { \__tag_get_mc_abs_cnt: }
271       }
272     \prop_if_in:NoF \g__tag_role_tags_NS_prop {#1}
273       {
274         \msg_warning:nne { tag } {role-unknown-tag} {#1}
275       }
276   }
```

(*End of definition for* __tag_check_mc_tag:N.)

29

`\g__tag_check_mc_used_intarray`
`\__tag_check_init_mc_used:`

This variable holds the list of used mc numbers. Everytime we store a mc-number we will add one the relevant array index If everything is right at the end there should be only 1 until the max count of the mcid. 2 indicates that one mcid was used twice, 0 that we lost one. In engines other than luatex the total number of all intarray entries are restricted so we use only a rather small value of 65536, and we initialize the array only at first used, guarded by the log-level. This check is probably only needed for debugging. TODO does this really make sense to check? When can it happen??

```
277 \cs_new_protected:Npn \__tag_check_init_mc_used:
278   {
279     \intarray_new:Nn \g__tag_check_mc_used_intarray { 65536 }
280     \cs_gset_eq:NN \__tag_check_init_mc_used: \prg_do_nothing:
281   }
```

(*End of definition for* `\g__tag_check_mc_used_intarray` *and* `\__tag_check_init_mc_used:`.)

`\__tag_check_mc_used:n` This checks if a mc is used twice.

```
282 \cs_new_protected:Npn \__tag_check_mc_used:n #1 %#1 mcid abscnt
283   {
284     \int_compare:nNnT {\l__tag_loglevel_int} > { 2 }
285       {
286         \__tag_check_init_mc_used:
287         \intarray_gset:Nnn \g__tag_check_mc_used_intarray
288           {#1}
289           { \intarray_item:Nn \g__tag_check_mc_used_intarray {#1} + 1 }
290         \int_compare:nNnT
291           {
292             \intarray_item:Nn \g__tag_check_mc_used_intarray {#1}
293           }
294           >
295           { 1 }
296           {
297             \msg_warning:nnn { tag } {mc-used-twice} {#1}
298           }
299       }
300   }
```

(*End of definition for* `\__tag_check_mc_used:n`.)

`\__tag_check_show_MCID_by_page:` This allows to show the mc on a page. Currently unused.

```
301 \cs_new_protected:Npn \__tag_check_show_MCID_by_page:
302   {
303     \tl_set:Ne \l__tag_tmpa_tl
304       {
305         \__tag_property_ref_lastpage:nn
306           {abspage}
307           {-1}
308       }
309     \int_step_inline:nnnn {1}{1}
310       {
311         \l__tag_tmpa_tl
312       }
313       {
314         \seq_clear:N \l_tmpa_seq
315         \int_step_inline:nnnn
```

```
316            {1}
317            {1}
318            {
319              \__tag_property_ref_lastpage:nn
320                {tagmcabs}
321                {-1}
322            }
323            {
324              \int_compare:nT
325                {
326                  \__tag_property_ref:enn
327                    {mcid-####1}
328                    {tagabspage}
329                    {-1}
330                  =
331                  ##1
332                }
333                {
334                  \seq_gput_right:Ne \l_tmpa_seq
335                    {
336                      Page##1-####1-
337                      \__tag_property_ref:enn
338                        {mcid-####1}
339                        {tagmcid}
340                        {-1}
341                    }
342                }
343            }
344          \seq_show:N \l_tmpa_seq
345        }
346    }
```

(*End of definition for* `\__tag_check_show_MCID_by_page:`*.*)

6.5 Checks related to the state of MC on a page or in a split stream

The following checks are currently only usable in generic mode as they rely on the marks defined in the mc-generic module. They are used to detect if a mc-chunk has been split by a page break or similar and additional end/begin commands are needed.

`\__tag_check_mc_in_galley_p:`
`\__tag_check_mc_in_galley:`*TF*

At first we need a test to decide if `\tag_mc_begin:n` (tmb) and `\tag_mc_end:` (tme) has been used at all on the current galley. As each command issues two slightly different marks we can do it by comparing firstmarks and botmarks. The test assumes that the marks have been already mapped into the sequence with `\@@_mc_get_marks:`. As `\seq_if_eq:NNTF` doesn't exist we use the tl-test.

```
347 \prg_new_conditional:Npnn \__tag_check_if_mc_in_galley: { T,F,TF }
348  {
349    \tl_if_eq:NNTF \l__tag_mc_firstmarks_seq \l__tag_mc_botmarks_seq
350      { \prg_return_false: }
351      { \prg_return_true: }
352  }
```

(*End of definition for* `\__tag_check_mc_in_galley:`*TF.*)

This checks if a extra top mark ("extra-tmb") is needed. According to the analysis this the case if the firstmarks start with e- or b+. Like above we assume that the marks content is already in the seq's.

```
353 \prg_new_conditional:Npnn \__tag_check_if_mc_tmb_missing: { T,F,TF }
354   {
355     \bool_if:nTF
356       {
357         \str_if_eq_p:ee {\seq_item:Nn \l__tag_mc_firstmarks_seq {1}}{e-}
358         ||
359         \str_if_eq_p:ee {\seq_item:Nn \l__tag_mc_firstmarks_seq {1}}{b+}
360       }
361       { \prg_return_true: }
362       { \prg_return_false: }
363   }
```

(*End of definition for* _tag_check_if_mc_tmb_missing:TF.)

This checks if a extra bottom mark ("extra-tme") is needed. According to the analysis this the case if the botmarks starts with b+. Like above we assume that the marks content is already in the seq's.

```
364 \prg_new_conditional:Npnn \__tag_check_if_mc_tme_missing: { T,F,TF }
365   {
366     \str_if_eq:eeTF {\seq_item:Nn \l__tag_mc_botmarks_seq {1}}{b+}
367       { \prg_return_true: }
368       { \prg_return_false: }
369   }
```

(*End of definition for* _tag_check_if_mc_tme_missing:TF.)

```
370 ⟨/package⟩
```

```
371 ⟨*debug⟩
```

Code for tagpdf-debug. This will probably change over time. At first something for the mc commands.

```
372 \msg_new:nnn { tag / debug } {mc-begin} { MC~begin~#1~with~options:~\tl_to_str:n{#2}~[\msg_lin
373 \msg_new:nnn { tag / debug } {mc-end}   { MC~end~#1~[\msg_line_context:] }
374
375 \cs_new_protected:Npn \__tag_debug_mc_begin_insert:n #1
376   {
377     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
378       {
379         \msg_note:nnnn { tag / debug } {mc-begin} {inserted} { #1 }
380       }
381   }
382 \cs_new_protected:Npn \__tag_debug_mc_begin_ignore:n #1
383   {
384     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
385       {
386         \msg_note:nnnn { tag / debug } {mc-begin } {ignored} { #1 }
387       }
388   }
389 \cs_new_protected:Npn \__tag_debug_mc_end_insert:
390   {
391     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
```

32

```
392       {
393           \msg_note:nnn { tag / debug } {mc-end} {inserted}
394       }
395   }
396   \cs_new_protected:Npn \__tag_debug_mc_end_ignore:
397   {
398       \int_compare:nNnT { \l__tag_loglevel_int } > {0}
399         {
400             \msg_note:nnn { tag / debug } {mc-end } {ignored}
401         }
402   }
```

And now something for the structures

```
403   \msg_new:nnn { tag / debug } {struct-begin}
404     {
405       Struct~\tag_get:n{struct_num}~begin~#1~with~options:~\tl_to_str:n{#2}~\\[\msg_line_context
406     }
407   \msg_new:nnn { tag / debug } {struct-end}
408     {
409       Struct~end~#1~[\msg_line_context:]
410     }
411   \msg_new:nnn { tag / debug } {struct-end-wrong}
412     {
413       Struct~end~'#1'~doesn't~fit~start~'#2'~[\msg_line_context:]
414     }
415
416   \cs_new_protected:Npn \__tag_debug_struct_begin_insert:n #1
417   {
418       \int_compare:nNnT { \l__tag_loglevel_int } > {0}
419         {
420             \msg_note:nnnn { tag / debug } {struct-begin} {inserted} { #1 }
421             \seq_log:N \g__tag_struct_tag_stack_seq
422         }
423   }
424   \cs_new_protected:Npn \__tag_debug_struct_begin_ignore:n #1
425   {
426       \int_compare:nNnT { \l__tag_loglevel_int } > {0}
427         {
428             \msg_note:nnnn { tag / debug } {struct-begin } {ignored} { #1 }
429         }
430   }
431   \cs_new_protected:Npn \__tag_debug_struct_end_insert:
432   {
433       \int_compare:nNnT { \l__tag_loglevel_int } > {0}
434         {
435             \msg_note:nnn { tag / debug } {struct-end} {inserted}
436             \seq_log:N \g__tag_struct_tag_stack_seq
437         }
438   }
439   \cs_new_protected:Npn \__tag_debug_struct_end_ignore:
440   {
441       \int_compare:nNnT { \l__tag_loglevel_int } > {0}
442         {
443             \msg_note:nnn { tag / debug } {struct-end } {ignored}
444         }
```

```
445    }
446  \cs_new_protected:Npn \__tag_debug_struct_end_check:n #1
447    {
448      \int_compare:nNnT { \l__tag_loglevel_int } > {0}
449        {
450          \seq_get:NNT \g__tag_struct_tag_stack_seq \l__tag_tmpa_tl
451            {
452              \str_if_eq:eeF
453              {#1}
454              {\exp_last_unbraced:NV\use_i:nn \l__tag_tmpa_tl}
455              {
456                \msg_warning:nnee { tag/debug }{ struct-end-wrong }
457                {#1}
458                {\exp_last_unbraced:NV\use_i:nn \l__tag_tmpa_tl}
459              }
460            }
461        }
462    }
```

This tracks tag stop and start. The tag-stop message should go before the int is increased.
The tag-start message after the int is decreased.

```
463  \msg_new:nnn { tag / debug } {tag-stop}
464    {
465      \int_if_zero:nTF
466        {#1}
467        {Tagging~stopped}
468        {Tagging~(not)~stopped~(already~inactive)}\\
469      level:~#1~==>~\int_eval:n{#1+1}\tl_if_empty:nF{#2}{,~label:~#2}~[\msg_line_context:]
470    }
471  \msg_new:nnn { tag / debug } {tag-start}
472    {
473      \int_if_zero:nTF
474        {#1}
475        {Tagging~restarted}
476        {Tagging~(not)~restarted}\\
477      level:~\int_eval:n{#1+1}~==>~#1\tl_if_empty:nF{#2}{,~label:~#2}~[\msg_line_context:]
478    }
479  ⟨/debug⟩
```

6.6 Benchmarks

It doesn't make much sense to do benchmarks in debug mode or in combination with a
log-level as this would slow down the compilation. So we add simple commands that can
be activated if l3benchmark has been loaded. TODO: is a warning needed?

```
480  ⟨*package⟩
481  \cs_new_protected:Npn \__tag_check_benchmark_tic:{}
482  \cs_new_protected:Npn \__tag_check_benchmark_toc:{}
483  \cs_new_protected:Npn \tag_check_benchmark_on:
484    {
485      \cs_if_exist:NT \benchmark_tic:
486        {
487          \cs_set_eq:NN \__tag_check_benchmark_tic: \benchmark_tic:
488          \cs_set_eq:NN \__tag_check_benchmark_toc: \benchmark_toc:
```

```
489        }
490    }
```
⟨/package⟩

Part II
The **tagpdf-user** module
Code related to LaTeX2e user commands and document commands
Part of the tagpdf package

1   Setup commands

`\tagpdfsetup` `\tagpdfsetup{⟨key val list⟩}`

This is the main setup command to adapt the behaviour of tagpdf. It can be used in the preamble and in the document (but not all keys make sense there).

`activate␣(setup-key)` And additional setup key which combine the other activate keys `activate/mc`, `activate/tree`, `activate/struct` and additionally adds a document structure.

`\tag_tool:n` `\tag_tool:n{⟨key val⟩}`
`\tagtool`

The tagging of basic document elements will require a variety of small commands to configure and adapt the tagging. This command will collect them under a command interface. The argument is *one* key-value like string. This is work in progress and both syntax, known arguments and implementation can change!

2   Commands related to mc-chunks

`\tagmcbegin` `\tagmcbegin {⟨key-val⟩}`
`\tagmcend`   `\tagmcend`
`\tagmcuse`   `\tagmcuse{⟨label⟩}`

These are wrappers around `\tag_mc_begin:n`, `\tag_mc_end:` and `\tag_mc_use:n`. The commands and their argument are documentated in the **tagpdf-mc** module. In difference to the expl3 commands, `\tagmcbegin` issues also an `\ignorespaces`, and `\tagmcend` will issue in horizontal mode an `\unskip`.

`\tagmcifinTF` `\tagmcifin {⟨true code⟩}{⟨false code⟩}`

This is a wrapper around `\tag_mc_if_in:TF`. and tests if an mc is open or not. It is mostly of importance for pdflatex as lualatex doesn't mind much if a mc tag is not correctly closed. Unlike the expl3 command it is not expandable.

The command is probably not of much use and will perhaps disappear in future versions. It normally makes more sense to push/pop an mc-chunk.

3 Commands related to structures

\tagstructbegin	\tagstructbegin {⟨*key-val*⟩}
\tagstructend	\tagstructend
\tagstructuse	\tagstructuse{⟨*label*⟩}

These are direct wrappers around \tag_struct_begin:n, \tag_struct_end: and \tag_struct_use:n. The commands and their argument are documented in the tagpdf-struct module.

4 Debugging

\ShowTagging	\ShowTagging {⟨*key-val*⟩}

This is a generic function to output various debugging helps. It not necessarily stops the compilation. The keys and their function are described below.

mc-data␣(show-key)	mc-data = ⟨*number*⟩

This key is (currently?) relevant for lua mode only. It shows the data of all mc-chunks created so far. It is accurate only after shipout (and perhaps a second compilation), so typically should be issued after a newpage. The value is a positive integer and sets the first mc-shown. If no value is given, 1 is used and so all mc-chunks created so far are shown.

mc-current␣(show-key)	mc-current

This key shows the number and the tag of the currently open mc-chunk. If no chunk is open it shows only the state of the abs count. It works in all mode, but the output in luamode looks different.

mc-marks␣(show-key)	mc-marks = show|use

This key helps to debug the page marks. It should only be used at shipout in header or footer.

struct-stack␣(show-key)	struct-stack = log|show

This key shows the current structure stack. With log the info is only written to the log-file, show stops the compilation and shows on the terminal. If no value is used, then the default is show.

debug/structures␣(show-key)	debug/structures = ⟨*structure number*⟩

This key is available only if the tagpdf-debug package is loaded and shows all structures starting with the one with the number given by the key.

5 Extension commands

The following commands and code parts are not core commands of tagpdf. They either provide work-arounds for missing functionality elsewhere, or do a first step to apply tagpdf commands to document commands.

The commands and keys should be view as experimental!

This part will be regularly revisited to check if the code should go to a better place or can be improved and so can change easily.

5.1 Fake space

`\pdffakespace` (lua-only) This provides a lua-version of the `\pdffakespace` primitive of pdftex.

5.2 Tagging of paragraphs

This makes use of the paragraph hooks in LaTeX to automate the tagging of paragraph. It requires sane paragraph nesting, faulty code, e.g. a missing `\par` at the end of a low-level vbox can highly confuse the tagging. The tags should be carefully checked if this is used.

`para/tagging␣(setup-key)`	`para/tagging = true|false`
`paratagging-show␣(deprecated)`	`debug/show=para`
`paratagging␣(deprecated)`	`debug/show=paraOff`

The `para/tagging` key can be used in `\tagpdfsetup` and enable/disables tagging of paragraphics. `debug/show=para` puts small colored numbers at the begin and end of a paragraph. This is meant as a debugging help. The number are boxes and have a (tiny) height, so they can affect typesetting.

`\tagpdfparaOn`
`\tagpdfparaOff` These commands allow to enable/disable para tagging too and are a bit faster then `\tagpdfsetup`. But I'm not sure if the names are good.

`\tagpdfsuppressmarks` This command allows to suppress the creation of the marks. It takes an argument which should normally be one of the mc-commands, puts a group around it and suppress the marks creation in this group. This command should be used if the begin and end command are at different boxing levels. E.g.

```
\@hangfrom
 {
  \tagstructbegin{tag=H1}%
  \tagmcbegin    {tag=H1}%
  #2
 }
 {#3\tagpdfsuppressmarks{\tagmcend}\tagstructend}%
```

38

5.3 Header and footer

Header and footer are automatically tagged as artifact: They are surrounded by an artifact-mc and inside tagging is stopped. If some real content is in the header and footer, tagging must be restarted there explicitly. The behaviour can be changed with the following key. The key accepts the values `true` (the default), `false` which disables the header tagging code. This can be useful if the page style is empty (it then avoids empty mc-chunks) or if the head and foot should be tagged in some special way. The last value, `pagination`, is like `true` but additionally adds an artifact structure with an pagination attribute.

`page/exclude-header-footer␣(setup-key)`   `page/exclude-header-footer = true|false|pagination`

5.4 Link tagging

Links need a special structure and cross reference system. This is added through hooks of the l3pdfannot module and will work automatically if tagging is activated.

Links should (probably) have an alternative text in the Contents key. It is unclear which text this should be and how to get it. Currently the code simply adds the fix texts `url` and `ref`. Another text can be added by changing the dictionary value:

```
\pdfannot_dict_put:nnn
{ link/GoTo }
{ Contents }
{ (ref) }
```

6 Socket support

`\tag_socket_use:n`   `\tag_socket_use:n {⟨socket name⟩}`
`\tag_socket_use:nn`   `\tag_socket_use:nn {⟨socket name⟩} {⟨socket argument⟩}`
`\UseTaggingSocket`   `\UseTaggingSocket {⟨socket name⟩}`
                        `\UseTaggingSocket {⟨socket name⟩} {⟨socket argument⟩}`

The next LaTeX (2024-06-01) will use special sockets for the tagging.

These sockets will use names starting with `tagsupport/`. Usually, these sockets have exactly two plugs defined: `noop` (when no tagging is requested or tagging is not wanted for some reason) and a second plug that enables the tagging. There may be more, e.g., tagging with special debugging, etc., but right now it is usually just on or off.

Given that we sometimes have to suspend tagging, it would be fairly inefficient to put different plugs into these sockets whenever that happens. We therefore offer `\UseTaggingSocket` which is like `\UseSocket` except that the socket name is specified without `tagsupport/`, i.e.,

$$\text{\UseTaggingSocket\{foo\}} \rightarrow \text{\UseSocket\{tagsupport/foo\}}$$

Beside being slightly shorter, the big advantage is that this way we can change `\UseTaggingSocket` to do nothing by switching a boolean instead of changing the plugs of the tagging support sockets back and forth.

It is possible to use the tagging support sockets with `\UseSocket` directly, but in this case the socket remains active if e.g. `\SuspendTagging` is in force. There may be reasons for doing that but in general we expect to always use `\UseTaggingSocket`.

The L3 programming layer versions `\tag_socket_use:n` and `\tag_socket_use:nn` are slightly more efficient than `\UseTaggingSocket` because they do not have to determine how many arguments the socket takes when disabling it.

7 User commands and extensions of document commands

```
1 ⟨@@=tag⟩
2 ⟨*header⟩
3 \ProvidesExplPackage {tagpdf-user} {2024-03-27} {0.99a}
4   {tagpdf - user commands}
5 ⟨/header⟩
```

8 Setup and preamble commands

`\tagpdfsetup`

```
6 ⟨base⟩\NewDocumentCommand \tagpdfsetup { m }{}
7 ⟨*package⟩
8 \RenewDocumentCommand \tagpdfsetup { m }
9   {
10     \keys_set:nn { __tag / setup } { #1 }
11   }
12 ⟨/package⟩
```

(*End of definition for* `\tagpdfsetup`*. This function is documented on page 36.*)

`\tag_tool:n`
`\tagtool`

This is a first definition of the tool command. Currently it uses key-val, but this should be probably be flattened to speed it up.

```
13 ⟨base⟩\cs_new_protected:Npn\tag_tool:n #1 {}
14 ⟨base⟩\cs_set_eq:NN\tagtool\tag_tool:n
15 ⟨*package⟩
16 \cs_set_protected:Npn\tag_tool:n #1
17   {
18     \tag_if_active:T { \keys_set:nn {tag / tool}{#1} }
19   }
20 \cs_set_eq:NN\tagtool\tag_tool:n
21 ⟨/package⟩
```

(*End of definition for* `\tag_tool:n` *and* `\tagtool`*. These functions are documented on page 36.*)

9 Commands for the mc-chunks

`\tagmcbegin`
`\tagmcend`
`\tagmcuse`

```
22 ⟨*base⟩
23 \NewDocumentCommand \tagmcbegin { m }
24   {
25     \tag_mc_begin:n {#1}
26   }
```

```
27
28
29 \NewDocumentCommand \tagmcend {  }
30   {
31     \tag_mc_end:
32   }
33
34 \NewDocumentCommand \tagmcuse { m }
35   {
36     \tag_mc_use:n {#1}
37   }
38 ⟨/base⟩
```

(*End of definition for* \tagmcbegin *,* \tagmcend *, and* \tagmcuse*. These functions are documented on page 36.*)

\tagmcifinTF   This is a wrapper around \tag_mc_if_in: and tests if an mc is open or not. It is mostly of importance for pdflatex as lualatex doesn't mind much if a mc tag is not correctly closed. Unlike the expl3 command it is not expandable.

```
39 ⟨*package⟩
40 \NewDocumentCommand \tagmcifinTF { m m }
41   {
42     \tag_mc_if_in:TF { #1 } { #2 }
43   }
44 ⟨/package⟩
```

(*End of definition for* \tagmcifinTF*. This function is documented on page 36.*)

10   Commands for the structure

\tagstructbegin   These are structure related user commands. There are direct wrapper around the expl3
\tagstructend   variants.
\tagstructuse
```
45 ⟨*base⟩
46 \NewDocumentCommand \tagstructbegin { m }
47   {
48     \tag_struct_begin:n {#1}
49   }
50
51 \NewDocumentCommand \tagstructend {  }
52   {
53    \tag_struct_end:
54   }
55
56 \NewDocumentCommand \tagstructuse { m }
57   {
58     \tag_struct_use:n {#1}
59   }
60 ⟨/base⟩
```

(*End of definition for* \tagstructbegin *,* \tagstructend *, and* \tagstructuse*. These functions are documented on page 37.*)

11 Socket support

Until we can be sure that the kernel defines the commands we provide them before redefining them:

```
61 ⟨∗base⟩
62 \providecommand\tag_socket_use:n[1]{}
63 \providecommand\tag_socket_use:nn[2]{}
64 \providecommand\UseTaggingSocket[1]{}
65 ⟨/base⟩
```

\tag_socket_use:n
\tag_socket_use:nn
\UseTaggingSocket

```
66 ⟨∗package⟩
67 \cs_set_protected:Npn \tag_socket_use:n #1
68   {
69     \bool_if:NT \l__tag_active_socket_bool
70       { \UseSocket {tagsupport/#1} }
71   }
72 \cs_set_protected:Npn \tag_socket_use:nn #1#2
73   {
74     \bool_if:NT \l__tag_active_socket_bool
75       { \UseSocket {tagsupport/#1} {#2} }
76   }
77 \cs_set_protected:Npn \UseTaggingSocket #1
78   {
79     \bool_if:NTF \l__tag_active_socket_bool
80       { \UseSocket{tagsupport/#1} }
81       {
82         \int_case:nnF
83           { \int_use:c { c__socket_tagsupport/#1_args_int } }
84           {
85             0 \prg_do_nothing:
86             1 \use_none:n
87             2 \use_none:nn
```

We do not expect tagging sockets with more than one or two arguments, so for now we only provide those.

```
88           }
89           \ERRORusetaggingsocket
90       }
91   }
92 ⟨/package⟩
```

(*End of definition for* \tag_socket_use:n, \tag_socket_use:nn, *and* \UseTaggingSocket. *These functions are documented on page 39.*)

12 Debugging

\ShowTagging This is a generic command for various show commands. It takes a keyval list, the various keys are implemented below.

```
93 ⟨∗package⟩
94 \NewDocumentCommand\ShowTagging { m }
95   {
```

```
96        \keys_set:nn { __tag / show }{ #1}
97
98    }
```

(*End of definition for* \ShowTagging. *This function is documented on page 37.*)

mc-data␣(show-key) This key is (currently?) relevant for lua mode only. It shows the data of all mc-chunks created so far. It is accurate only after shipout, so typically should be issued after a newpage. With the optional argument the minimal number can be set.

```
99  \keys_define:nn { __tag / show }
100   {
101     mc-data .code:n =
102       {
103         \sys_if_engine_luatex:T
104           {
105             \lua_now:e{ltx.__tag.trace.show_all_mc_data(#1,\__tag_get_mc_abs_cnt:,0)}
106           }
107       }
108     ,mc-data .default:n = 1
109   }
110
```

(*End of definition for* mc-data (show-key). *This function is documented on page 37.*)

mc-current␣(show-key) This shows some info about the current mc-chunk. It works in generic and lua-mode.

```
111  \keys_define:nn { __tag / show }
112   { mc-current  .code:n =
113       {
114         \bool_if:NTF \g__tag_mode_lua_bool
115           {
116             \sys_if_engine_luatex:T
117               {
118                 \int_compare:nNnTF
119                   { -2147483647 }
120                     =
121                   {
122                     \lua_now:e
123                       {
124                         tex.print
125                           (tex.getattribute
126                             (luatexbase.attributes.g__tag_mc_cnt_attr))
127                       }
128                   }
129                   {

249               }
250         }
251       ,debug/structures .default:n = 0
252   }
253 ⟨/debug⟩
```

(*End of definition for* `debug/structures` (`show-key`). *This function is documented on page 37.*)

13   Commands to extend document commands

The following commands and code parts are not core commands of tagpdf. They either provide work-arounds for missing functionality elsewhere, or do a first step to apply tagpdf commands to document commands. This part should be regularly revisited to check if the code should go to a better place or can be improved.

```
254 ⟨*package⟩
```

13.1   Document structure

<div style="color:gray">\g__tag_root_default_tl</div>
<div style="color:red">activate␣(setup-key)</div>
activate/socket␣(setup-key)

```
255 \tl_new:N\g__tag_root_default_tl
256 \tl_gset:Nn\g__tag_root_default_tl {Document}
257
258 \hook_gput_code:nnn{begindocument}{tagpdf}{\tagstructbegin{tag=\g__tag_root_default_tl}}
259 \hook_gput_code:nnn{tagpdf/finish/before}{tagpdf}{\tagstructend}
260
261 \keys_define:nn { __tag / setup}
262  {
263    activate/socket .bool_set:N  = \l__tag_active_socket_bool,
264    activate   .code:n =
265     {
266       \keys_set:nn { __tag / setup }
267         { activate/mc,activate/tree,activate/struct,activate/socket }
268       \tl_gset:Nn\g__tag_root_default_tl {#1}
269     },
270    activate .default:n = Document
271  }
272
```

(*End of definition for* \g__tag_root_default_tl*,* activate (setup-key)*, and* activate/socket (setup-key)*. These functions are documented on page 36.*)

13.2 Structure destinations

Since TeXlive 2022 pdftex and luatex offer support for structure destinations and the pdfmanagement has backend support for. We activate them if structures are actually created. Structure destinations are actually PDF 2.0 only but they don't harm in older PDF and can improve html export.

```
273 \AddToHook{begindocument/before}
274   {
275     \bool_lazy_and:nnT
276       { \g__tag_active_struct_dest_bool }
277       { \g__tag_active_struct_bool }
278       {
279         \tl_set:Nn \l_pdf_current_structure_destination_tl
280           { __tag/struct/\g__tag_struct_stack_current_tl }
281         \pdf_activate_structure_destination:
282       }
283   }
```

13.3 Fake space

\pdffakespace   We need a luatex variant for \pdffakespace. This should probably go into the kernel at some time. We also provide a no-op version for dvi mode

```
284 \sys_if_engine_luatex:T
285   {
286     \NewDocumentCommand\pdffakespace { }
287       {
288         \__tag_fakespace:
289       }
290   }
291 \providecommand\pdffakespace{}
```

(*End of definition for* \pdffakespace*. This function is documented on page 38.*)

13.4 Paratagging

The following are some simple commands to enable/disable paratagging. Probably one should add some checks if we are already in a paragraph.

\l__tag_para_bool
\l__tag_para_flattened_bool
\l__tag_para_show_bool
\g__tag_para_begin_int
\g__tag_para_end_int
\g__tag_para_main_begin_int
\g__tag_para_main_end_int
\g__tag_para_main_struct_tl
\l__tag_para_tag_default_tl
\l__tag_para_tag_tl
\l__tag_para_main_tag_tl
\l__tag_para_attr_class_tl
\l__tag_para_main_attr_class_tl

At first some variables.

```
292 ⟨/package⟩
293 ⟨base⟩\bool_new:N \l__tag_para_flattened_bool
294 ⟨base⟩\bool_new:N \l__tag_para_bool
295 ⟨*package⟩
296 \int_new:N  \g__tag_para_begin_int
297 \int_new:N  \g__tag_para_end_int
298 \int_new:N  \g__tag_para_main_begin_int
299 \int_new:N  \g__tag_para_main_end_int
```

47

this will hold the structure number of the current text-unit.

```
300 \tl_new:N   \g__tag_para_main_struct_tl
301 \tl_gset:Nn  \g__tag_para_main_struct_tl {1}
302 \tl_new:N   \l__tag_para_tag_default_tl
303 \tl_set:Nn  \l__tag_para_tag_default_tl { text }
304 \tl_new:N   \l__tag_para_tag_tl
305 \tl_set:Nn  \l__tag_para_tag_tl { \l__tag_para_tag_default_tl }
306 \tl_new:N   \l__tag_para_main_tag_tl
307 \tl_set:Nn  \l__tag_para_main_tag_tl {text-unit}
```

this is perhaps already defined by the block code

```
308 \tl_if_exist:NF \l__tag_para_attr_class_tl
309  {\tl_new:N \l__tag_para_attr_class_tl }
310 \tl_new:N \l__tag_para_main_attr_class_tl
```

(*End of definition for* `\l__tag_para_bool` *and others.*)

__tag_gincr_para_main_begin_int:
__tag_gincr_para_main_end_int:
__tag_gincr_para_begin_int:
__tag_gincr_para_end_int:

The global para counter should be set through commands so that `\tag_stop:` can stop them.

```
311 \cs_new_protected:Npn \__tag_gincr_para_main_begin_int:
312  {
313    \int_gincr:N \g__tag_para_main_begin_int
314  }
315 \cs_new_protected:Npn \__tag_gincr_para_begin_int:
316  {
317    \int_gincr:N \g__tag_para_begin_int
318  }
319 \cs_new_protected:Npn \__tag_gincr_para_main_end_int:
320  {
321    \int_gincr:N \g__tag_para_main_end_int
322  }
323 \cs_new_protected:Npn \__tag_gincr_para_end_int:
324  {
325    \int_gincr:N \g__tag_para_end_int
326  }
```

(*End of definition for* `\__tag_gincr_para_main_begin_int:` *and others.*)

__tag_start_para_ints:
__tag_stop_para_ints:

```
327 \cs_new_protected:Npn \__tag_start_para_ints:
328  {
329    \cs_set_protected:Npn \__tag_gincr_para_main_begin_int:
330     {
331       \int_gincr:N \g__tag_para_main_begin_int
332     }
333    \cs_set_protected:Npn \__tag_gincr_para_begin_int:
334     {
335       \int_gincr:N \g__tag_para_begin_int
336     }
337    \cs_set_protected:Npn \__tag_gincr_para_main_end_int:
338     {
339       \int_gincr:N \g__tag_para_main_end_int
340     }
341    \cs_set_protected:Npn \__tag_gincr_para_end_int:
```

```
342      {
343        \int_gincr:N \g__tag_para_end_int
344      }
345    }
346  \cs_new_protected:Npn \__tag_stop_para_ints:
347    {
348      \cs_set_eq:NN \__tag_gincr_para_main_begin_int:\prg_do_nothing:
349      \cs_set_eq:NN \__tag_gincr_para_begin_int: \prg_do_nothing:
350      \cs_set_eq:NN \__tag_gincr_para_main_end_int: \prg_do_nothing:
351      \cs_set_eq:NN \__tag_gincr_para_end_int: \prg_do_nothing:
352    }
```

(*End of definition for* `\__tag_start_para_ints:` *and* `\__tag_stop_para_ints:`.)

We want to be able to inspect the current para main structure, so we need a command to store its structure number

`\__tag_para_main_store_struct:`

```
353  \cs_new:Npn \__tag_para_main_store_struct:
354    {
355      \tl_gset:Ne \g__tag_para_main_struct_tl {\int_use:N \c@g__tag_struct_abs_int }
356    }
```

(*End of definition for* `\__tag_para_main_store_struct:`.)

TEMPORARLY FIX (2023-11-17). Until latex-lab is updated we must adapt a sec command:

```
357  \AddToHook{package/latex-lab-testphase-sec/after}
358    {
359      \cs_set_protected:Npn \@kernel@tag@hangfrom #1
360        {
361          \tagstructbegin{tag=\l__tag_para_tag_tl}
362          \__tag_gincr_para_begin_int:
363          \tagstructbegin{tag=Lbl}
364          \setbox\@tempboxa
365            \hbox
366              {
367                \bool_lazy_and:nnT
368                  {\tag_if_active_p:}
369                  {\g__tag_mode_lua_bool}
370                  {\tagmcbegin{tag=Lbl}}
371                  {#1}
372              }
373          \tag_stop:n{hangfrom}
374          \hangindent \wd\@tempboxa\noindent
375          \tag_start:n{hangfrom}
376          \tagmcbegin{}\box\@tempboxa\tagmcend\tagstructend\tagmcbegin{}
377        }
378    }
```

and one temporary adaptions for the block module:

```
379  \AddToHook{package/latex-lab-testphase-block/after}
380    {
381      \tl_if_exist:NT \l_tag_para_attr_class_tl
382        {
383          \tl_set:Nn \l__tag_para_attr_class_tl { \l_tag_para_attr_class_tl }
384        }
```

```
385 }
386
```

These keys enable/disable locally paratagging. Paragraphs are typically tagged with two structure: A main structure around the whole paragraph, and inner structures around the various chunks. Debugging can be activated locally with `debug/show=para`, this can affect the typesetting as the small numbers are boxes and they have a (small) height. Debugging can be deactivated with `debug/show=paraOff` The `para/tag` key sets the tag used by the inner structure, `para/maintag` the tag of the outer structure, both can also be changed with `\tag_tool:n`

```
387 \keys_define:nn { __tag / setup }
388   {
389     para/tagging      .bool_set:N = \l__tag_para_bool,
390     debug/show/para   .code:n = {\bool_set_true:N \l__tag_para_show_bool},
391     debug/show/paraOff  .code:n = {\bool_set_false:N \l__tag_para_show_bool},
392     para/tag          .tl_set:N   = \l__tag_para_tag_tl,
393     para/maintag      .tl_set:N   = \l__tag_para_main_tag_tl,
394     para/flattened    .bool_set:N = \l__tag_para_flattened_bool
395   }
396 \keys_define:nn { tag / tool}
397   {
398     para/tagging   .bool_set:N = \l__tag_para_bool,

```

(*End of definition for* `para/tagging` (`setup-key`) *and others. These functions are documented on page* *38.*)

Helper command for debugging:

```
416 \cs_new_protected:Npn \__tag_check_para_begin_show:nn #1 #2
417 %#1 color, #2 prefix
418   {
419     \bool_if:NT \l__tag_para_show_bool
420       {
421         \tag_mc_begin:n{artifact}
422         \llap{\color_select:n{#1}\tiny#2\int_use:N\g__tag_para_begin_int\ }
423         \tag_mc_end:
424       }
```

```
425     }
426
427 \cs_new_protected:Npn \__tag_check_para_end_show:nn #1 #2
428 %#1  color, #2 prefix
429   {
430     \bool_if:NT \l__tag_para_show_bool
431       {
432         \tag_mc_begin:n{artifact}
433         \rlap{\color_select:n{#1}\tiny\ #2\int_use:N\g__tag_para_end_int}
434         \tag_mc_end:
435       }
436   }
```

The para/begin and para/end code. We have two variants here: a simpler one, which must be used if the block code is not used (and so probably will disappear at some time) and a more sophisticated one that must be used if the block code is used. It is possible that we will need more variants, so we setup a socket so that the code can be easily switched.

```
437 \socket_new:nn        {tagsupport/para/begin}{0}
438 \socket_new:nn        {tagsupport/para/end}{0}
439
440 \socket_new_plug:nnn{tagsupport/para/begin}{plain}
441   {
442     \bool_if:NT \l__tag_para_bool
443       {
444         \bool_if:NF \l__tag_para_flattened_bool
445           {

472                     \tag_struct_begin:n
```

51

```
473                {
474                 tag=\l__tag_para_main_tag_tl,
475                 attribute-class=\l__tag_para_main_attr_class_tl,
476                }
477               \__tag_para_main_store_struct:
478             }
479          }
480         \__tag_gincr_para_begin_int:
481         \__tag_check_typeout_v:n {==>~increment~ P \on@line }
482         \tag_struct_begin:n
483           {
484             tag=\l__tag_para_tag_tl
485             ,attribute-class=\l__tag_para_attr_class_tl
486           }
487         \__tag_check_para_begin_show:nn {green}{\PARALABEL}
488         \tag_mc_begin:n {}
489       }
490     }
491   }
```

there was no real difference between the original and in the block variant, only a debug message. We therefore define only a plain variant.

```
492 \socket_new_plug:nnn{tagsupport/para/end}{plain}
493   {
494     \bool_if:NT \l__tag_para_bool
495       {
496         \__tag_gincr_para_end_int:
497         \__tag_check_typeout_v:n {==>~increment~ /P \on@line }
498         \tag_mc_end:
499         \__tag_check_para_end_show:nn {red}{}
500         \tag_struct_end:
501         \bool_if:NF \l__tag_para_flattened_bool
502          {
503            \__tag_gincr_para_main_end_int:
504            \tag_struct_end:
505          }
506       }
507   }
```

By default we assign the plain plug:

```
508 \socket_assign_plug:nn { tagsupport/para/begin}{plain}
509 \socket_assign_plug:nn { tagsupport/para/end}{plain}
```

And use the sockets in the hooks. Once tagging sockets exist, this can be adapted.

```
510 \AddToHook{para/begin}{ \socket_use:n { tagsupport/para/begin }
511   }
512 \AddToHook{para/end} { \socket_use:n { tagsupport/para/end } }
```

If the block code is loaded we must ensure that it doesn't overwrite the hook again. And we must reassign the para/begin plug. This can go once the block code no longer tries to adapt the hooks.

```
513 \AddToHook{package/latex-lab-testphase-block/after}
514   {
515     \RemoveFromHook{para/begin}[tagpdf]
516     \RemoveFromHook{para/end}[latex-lab-testphase-block]
```

52

```
517  \AddToHook{para/begin}[tagpdf]
518    {
519      \socket_use:n { tagsupport/para/begin }
520    }
521  \AddToHook{para/end}[tagpdf]
522    {
523      \socket_use:n { tagsupport/para/end }
524    }
525  \socket_assign_plug:nn { tagsupport/para/begin}{block}
526  }
527
```

We check the para count at the end. If tagging is not active it is not a error, but we issue a warning as it perhaps indicates that the testphase code didn't guard everything correctly.

```
528  \AddToHook{enddocument/info}
529    {
530      \tag_if_active:F
531        {
532          \msg_redirect_name:nnn { tag } { para-hook-count-wrong } { warning }
533        }
534      \int_compare:nNnF {\g__tag_para_main_begin_int}={\g__tag_para_main_end_int}
535          {
536            \msg_error:nneee
537              {tag}
538              {para-hook-count-wrong}
539              {\int_use:N\g__tag_para_main_begin_int}
540              {\int_use:N\g__tag_para_main_end_int}
541              {text-unit}
542          }
543      \int_compare:nNnF {\g__tag_para_begin_int}={\g__tag_para_end_int}
544          {
545            \msg_error:nneee
546              {tag}
547              {para-hook-count-wrong}
548              {\int_use:N\g__tag_para_begin_int}
549              {\int_use:N\g__tag_para_end_int}
550              {text}
551          }
552    }
```

We need at least the new-or-1 code. In generic mode we also must insert the code to finish the MC-chunks

```

587        }
588    }
589 ⟨/package⟩
```

\tagpdfparaOn This two command switch para mode on and off. \tagpdfsetup could be used too but
\tagpdfparaOff is longer. An alternative is \tag_tool:n{para=false}

```
590 ⟨base⟩\newcommand\tagpdfparaOn {}
591 ⟨base⟩\newcommand\tagpdfparaOff{}
592 ⟨*package⟩
593 \renewcommand\tagpdfparaOn {\bool_set_true:N \l__tag_para_bool}
594 \renewcommand\tagpdfparaOff{\bool_set_false:N \l__tag_para_bool}
```

(*End of definition for* \tagpdfparaOn *and* \tagpdfparaOff*. These functions are documented on page* *38*.)

\tagpdfsuppressmarks This command allows to suppress the creation of the marks. It takes an argument
which should normally be one of the mc-commands, puts a group around it and suppress
the marks creation in this group. This command should be used if the begin and end
command are at different boxing levels. E.g.

```
\@hangfrom
 {
  \tagstructbegin{tag=H1}%
  \tagmcbegin    {tag=H1}%
  #2
 }
 {#3\tagpdfsuppressmarks{\tagmcend}\tagstructend}%
```

```
595 \NewDocumentCommand\tagpdfsuppressmarks{m}
596   {{\use:c{__tag_mc_disable_marks:} #1}}
```

(*End of definition for* \tagpdfsuppressmarks*. This function is documented on page* *38*.)

13.5 Language support

With the following key the lang variable is set. All structures in the current group will then set this lang variable.

```
597 \keys_define:nn { __tag / setup }
598   {
599     text / lang .tl_set:N = \l__tag_struct_lang_tl
600   }
```

(*End of definition for* test/lang *(setup-key). This function is documented on page* **??**.)

13.6 Header and footer

Header and footer should normally be tagged as artifacts. The following code requires the new hooks. For now we allow to disable this function, but probably the code should always there at the end. TODO check if Pagination should be changeable.

```
601 \cs_new_protected:Npn\__tag_hook_kernel_before_head:{}
602 \cs_new_protected:Npn\__tag_hook_kernel_after_head:{}
603 \cs_new_protected:Npn\__tag_hook_kernel_before_foot:{}
604 \cs_new_protected:Npn\__tag_hook_kernel_after_foot:{}
605
606 \AddToHook{begindocument}
607   {
608    \cs_if_exist:NT \@kernel@before@head
609     {
610       \tl_put_right:Nn \@kernel@before@head {\__tag_hook_kernel_before_head:}
611       \tl_put_left:Nn  \@kernel@after@head  {\__tag_hook_kernel_after_head:}
612       \tl_put_right:Nn \@kernel@before@foot {\__tag_hook_kernel_before_foot:}
613       \tl_put_left:Nn  \@kernel@after@foot  {\__tag_hook_kernel_after_foot:}
614     }
615   }
616
617 \bool_new:N \g__tag_saved_in_mc_bool
618 \cs_new_protected:Npn \__tag_exclude_headfoot_begin:
619  {
620     \bool_set_false:N  \l__tag_para_bool
621     \bool_if:NTF \g__tag_mode_lua_bool
622       {
623        \tag_mc_end_push:
624       }
625       {
626         \bool_gset_eq:NN   \g__tag_saved_in_mc_bool \g__tag_in_mc_bool
627         \bool_gset_false:N \g__tag_in_mc_bool
628       }
629     \tag_mc_begin:n {artifact}
630     \tag_stop:n{headfoot}
631  }
632 \cs_new_protected:Npn \__tag_exclude_headfoot_end:
633  {
634     \tag_start:n{headfoot}
635     \tag_mc_end:
636     \bool_if:NTF \g__tag_mode_lua_bool
```

```
637        {
638          \tag_mc_begin_pop:n{}
639        }
640        {
641          \bool_gset_eq:NN \g__tag_in_mc_bool\g__tag_saved_in_mc_bool
642        }
643    }
```

This version allows to use an Artifact structure

```
644  \__tag_attr_new_entry:nn {__tag/attr/pagination}{/O/Artifact/Type/Pagination}
645  \cs_new_protected:Npn \__tag_exclude_struct_headfoot_begin:n #1
646    {
647      \bool_set_false:N  \l__tag_para_bool
648      \bool_if:NTF \g__tag_mode_lua_bool
649        {
650          \tag_mc_end_push:
651        }
652        {
653          \bool_gset_eq:NN    \g__tag_saved_in_mc_bool \g__tag_in_mc_bool
654          \bool_gset_false:N \g__tag_in_mc_bool
655        }
656      \tag_struct_begin:n{tag=Artifact,attribute-class=__tag/attr/#1}
657      \tag_mc_begin:n {artifact=#1}
658      \tag_stop:n{headfoot}
659    }
660
661  \cs_new_protected:Npn \__tag_exclude_struct_headfoot_end:
662    {
663      \tag_start:n{headfoot}
664      \tag_mc_end:
665      \tag_struct_end:
666      \bool_if:NTF \g__tag_mode_lua_bool
667        {
668          \tag_mc_begin_pop:n{}
669        }
670        {
671          \bool_gset_eq:NN \g__tag_in_mc_bool\g__tag_saved_in_mc_bool
672        }
673    }
```

And now the keys

```
674  \keys_define:nn { __tag / setup }
675    {
676      page/exclude-header-footer .choice:,
677      page/exclude-header-footer / true .code:n =
678        {
679          \cs_set_eq:NN \__tag_hook_kernel_before_head: \__tag_exclude_headfoot_begin:
680          \cs_set_eq:NN \__tag_hook_kernel_before_foot: \__tag_exclude_headfoot_begin:
681          \cs_set_eq:NN \__tag_hook_kernel_after_head:  \__tag_exclude_headfoot_end:
682          \cs_set_eq:NN \__tag_hook_kernel_after_foot:  \__tag_exclude_headfoot_end:
683        },
684      page/exclude-header-footer / pagination .code:n =
685        {
```

```
686        \cs_set:Nn \__tag_hook_kernel_before_head: { \__tag_exclude_struct_headfoot_begin:n {pa
687        \cs_set:Nn \__tag_hook_kernel_before_foot: { \__tag_exclude_struct_headfoot_begin:n {pa
688        \cs_set_eq:NN \__tag_hook_kernel_after_head:  \__tag_exclude_struct_headfoot_end:

697      },
698    page/exclude-header-footer .default:n = true,
699    page/exclude-header-footer .initial:n = true,
```
deprecated name
```
700      exclude-header-footer .meta:n = { page/exclude-header-footer = {#1} }
701    }
```

(*End of definition for* `page/exclude-header-footer` *(setup-key) and* `exclude-header-footer` *(deprecated).*
These functions are documented on page 39.)

13.7 Links

We need to close and reopen mc-chunks around links. Currently we handle URI and
GoTo (internal) links. Links should have an alternative text in the Contents key. It is
unclear which text this should be and how to get it.

```
702 \hook_gput_code:nnn
703    {pdfannot/link/URI/before}
704    {tagpdf}

Part III
The **tagpdf-tree** module Commands trees and main dictionaries
Part of the tagpdf package

```
1 ⟨@@=tag⟩
2 ⟨*header⟩
3 \ProvidesExplPackage {tagpdf-tree-code} {2024-03-27} {0.99a}
4   {part of tagpdf - code related to writing trees and dictionaries to the pdf}
5 ⟨/header⟩
```

1 Trees, pdfmanagement and finalization code

The code to finish the structure is in a hook. This will perhaps at the end be a kernel hook. TODO check right place for the code The pdfmanagement code is the kernel hook after shipout/lastpage so all code affecting it should be before. Objects can be written later, at least in pdf mode.

```
6  ⟨*package⟩
7  \hook_gput_code:nnn{begindocument}{tagpdf}
8    {
9      \bool_if:NT \g__tag_active_tree_bool
10       {
11         \sys_if_output_pdf:TF
12           {
13             \AddToHook{enddocument/end} { \__tag_finish_structure: }
14           }
15           {
16             \AddToHook{shipout/lastpage} { \__tag_finish_structure: }
17           }
18       }
19   }
```

1.1 Check structure

__tag_tree_final_checks:

```
20 \cs_new_protected:Npn \__tag_tree_final_checks:
21 {
22   \int_compare:nNnF {\seq_count:N\g__tag_struct_stack_seq}={1}
23     {
24       \msg_warning:nn {tag}{tree-struct-still-open}
25       \int_step_inline:nnn{2}{\seq_count:N\g__tag_struct_stack_seq}
26        {\tag_struct_end:}
27     }
28   \msg_note:nn {tag}{tree-statistic}
29 }
```

(*End of definition for* __tag_tree_final_checks:.)

1.2 Catalog: MarkInfo and StructTreeRoot and OpenAction

The StructTreeRoot and the MarkInfo entry must be added to the catalog. If there is an OpenAction entry we must update it, so that it contains also a structure destination. We do it late so that we can win, but before the pdfmanagement hook.

__tag/struct/0   This is the object for the root object, the StructTreeRoot

```
30 \pdf_object_new:n { __tag/struct/0 }
```

(*End of definition for* __tag/struct/0.)

\g__tag_tree_openaction_struct_tl   We need a variable that indicates which structure is wanted in the OpenAction. By default we use 1 (the Document structure).

```
31 \tl_new:N   \g__tag_tree_openaction_struct_tl
32 \tl_gset:Nn \g__tag_tree_openaction_struct_tl {1}
```

(*End of definition for* \g__tag_tree_openaction_struct_tl.)

viewer/startpage␣(setup-key)   We also need an option to setup the start structure. So we setup a key which sets the variable to the current structure. This still requires hyperref to do most of the job, this should perhaps be changed.

```
33 \keys_define:nn { __tag / setup }
34   {
35     viewer/startstructure .code:n =
36       {
37         \tl_gset:Ne \g__tag_tree_openaction_struct_tl {#1}
38       }
39     ,viewer/startstructure .default:n =  { \int_use:N \c@g__tag_struct_abs_int }
40   }
```

(*End of definition for* viewer/startpage (setup-key). *This function is documented on page* **??**.)

The OpenAction should only be updated if it is there. So we inspect the Catalog-prop:

```
41 \cs_new_protected:Npn \__tag_tree_update_openaction:
42   {
43     \prop_get:cnNT
44       { \__kernel_pdfdict_name:n { g__pdf_Core/Catalog } }
45       {OpenAction}
46       \l__tag_tmpa_tl
47         {
```

we only do something if the OpenAction is an array (as set by hyperref) in other cases we hope that the author knows what they did.

```
48         \tl_if_head_eq_charcode:eNT { \tl_trim_spaces:V\l__tag_tmpa_tl } [ %]
49           {
50             \seq_set_split:NnV\l__tag_tmpa_seq{/}\l__tag_tmpa_tl
51             \pdfmanagement_add:nne {Catalog} { OpenAction }
52               {
53                 <<
54                   /S/GoTo \c_space_tl
55                   /D~\l__tag_tmpa_tl\c_space_tl
56                   /SD~[\pdf_object_ref:e{__tag/struct/\g__tag_tree_openaction_struct_tl}
```

there should be always a /Fit etc in the array but better play safe here ...

```
57                            \int_compare:nNnTF{ \seq_count:N \l__tag_tmpa_seq } > {1}
58                            { /\seq_item:Nn\l__tag_tmpa_seq{2} }
59                            { ] }
60                 >>
61              }
62           }
63        }
64    }

65 \hook_gput_code:nnn{shipout/lastpage}{tagpdf}
66   {
67     \bool_if:NT \g__tag_active_tree_bool
68       {
69         \pdfmanagement_add:nnn { Catalog / MarkInfo } { Marked } { true }
70         \pdfmanagement_add:nne
71           { Catalog }
72           { StructTreeRoot }
73           { \pdf_object_ref:n { __tag/struct/0 } }
74         \__tag_tree_update_openaction:
75       }
76   }
```

1.3   Writing the IDtree

The ID are currently quite simple: every structure has an ID build from the prefix ID together with the structure number padded with enough zeros to that we get directly an lexical order. We ship them out in bundles At first a seq to hold the references for the kids

\g__tag_tree_id_pad_int

```
77 \int_new:N\g__tag_tree_id_pad_int
```

(*End of definition for* \g__tag_tree_id_pad_int.)

Now we get the needed padding

```
78 \cs_generate_variant:Nn \tl_count:n {e}
79 \hook_gput_code:nnn{begindocument}{tagpdf}
80  {
81    \int_gset:Nn\g__tag_tree_id_pad_int
82      {\tl_count:e { \__tag_property_ref_lastpage:nn{tagstruct}{1000}}+1}
83  }
84
```

This is the main code to write the tree it basically splits the existing structure numbers in chunks of length 50 TODO consider is 50 is a good length.

```
85 \cs_new_protected:Npn \__tag_tree_write_idtree:
86   {
87     \tl_clear:N \l__tag_tmpa_tl
88     \tl_clear:N \l__tag_tmpb_tl
89     \int_zero:N \l__tag_tmpa_int
90     \int_step_inline:nn {\c@g__tag_struct_abs_int}
91       {
92         \int_incr:N\l__tag_tmpa_int
93         \tl_put_right:Ne \l__tag_tmpa_tl
```

```
94          {
95            \__tag_struct_get_id:n{##1}~\pdf_object_ref:n{__tag/struct/##1}~
96          }
97        \int_compare:nNnF {\l__tag_tmpa_int}<{50} %
98          {
99            \pdf_object_unnamed_write:ne {dict}
100             { /Limits~[\__tag_struct_get_id:n{##1-\l__tag_tmpa_int+1}~\__tag_struct_get_id:n
101               /Names~[\l__tag_tmpa_tl]
102             }
103           \tl_put_right:Ne\l__tag_tmpb_tl {\pdf_object_ref_last:\c_space_tl}
104           \int_zero:N \l__tag_tmpa_int
105           \tl_clear:N \l__tag_tmpa_tl
106         }
107     }
108     \tl_if_empty:NF \l__tag_tmpa_tl
109      {
110        \pdf_object_unnamed_write:ne {dict}
111          {
112           /Limits~
113            [\__tag_struct_get_id:n{\c@g__tag_struct_abs_int-\l__tag_tmpa_int+1}~
114             \__tag_struct_get_id:n{\c@g__tag_struct_abs_int}]
115           /Names~[\l__tag_tmpa_tl]
116          }
117        \tl_put_right:Ne\l__tag_tmpb_tl {\pdf_object_ref_last:}
118      }
119    \pdf_object_unnamed_write:ne {dict}{/Kids~[\l__tag_tmpb_tl]}
120    \__tag_prop_gput:cne
121        { g__tag_struct_0_prop }
122        { IDTree }
123        { \pdf_object_ref_last: }
124   }
```

1.4 Writing structure elements

The following commands are needed to write out the structure.

This writes out the root object.

```
125 \cs_new_protected:Npn \__tag_tree_write_structtreeroot:
126   {
127     \__tag_prop_gput:cne
128       { g__tag_struct_0_prop }
129       { ParentTree }
130       { \pdf_object_ref:n { __tag/tree/parenttree } }
131     \__tag_prop_gput:cne
132       { g__tag_struct_0_prop }
133       { RoleMap }
134       { \pdf_object_ref:n { __tag/tree/rolemap } }
135     \__tag_struct_fill_kid_key:n { 0 }
136     \prop_gremove:cn { g__tag_struct_0_prop } {S}
137     \__tag_struct_get_dict_content:nN { 0 } \l__tag_tmpa_tl
138     \pdf_object_write:nne
139       { __tag/struct/0 }
140       {dict}
141       {
```

```
142            \l__tag_tmpa_tl
143          }
144    }
```

(*End of definition for* `\__tag_tree_write_structtreeroot:`.)

`\__tag_tree_write_structelements:` This writes out the other struct elems, the absolute number is in the counter.

```
145 \cs_new_protected:Npn \__tag_tree_write_structelements:
146    {
147      \int_step_inline:nnnn {1}{1}{\c@g__tag_struct_abs_int}
148        {
149          \__tag_struct_write_obj:n { ##1 }
150        }
151    }
```

(*End of definition for* `\__tag_tree_write_structelements:`.)

1.5 ParentTree

`__tag/tree/parenttree` The object which will hold the parenttree

```
152 \pdf_object_new:n { __tag/tree/parenttree }
```

(*End of definition for* `__tag/tree/parenttree`.)

The ParentTree maps numbers to objects or (if the number represents a page) to arrays of objects. The numbers refer to two dictinct types of entries: page streams and real objects like annotations. The numbers must be distinct and ordered. So we rely on abspage for the pages and put the real objects at the end. We use a counter to have a chance to get the correct number if code is processed twice.

`\c@g__tag_parenttree_obj_int` This is a counter for the real objects. It starts at the absolute last page value. It relies on l3ref.

```
153 \newcounter  { g__tag_parenttree_obj_int }
154 \hook_gput_code:nnn{begindocument}{tagpdf}
155    {
156      \int_gset:Nn
157        \c@g__tag_parenttree_obj_int
158        { \__tag_property_ref_lastpage:nn{abspage}{100}  }
159    }
```

(*End of definition for* `\c@g__tag_parenttree_obj_int`.)

We store the number/object references in a tl-var. If more structure is needed one could switch to a seq.

`\g__tag_parenttree_objr_tl`

```
160 \tl_new:N \g__tag_parenttree_objr_tl
```

(*End of definition for* `\g__tag_parenttree_objr_tl`.)

`\__tag_parenttree_add_objr:nn` This command stores a StructParent number and a objref into the tl var. This is only for objects like annotations, pages are handled elsewhere.

```
161 \cs_new_protected:Npn \__tag_parenttree_add_objr:nn #1 #2 %#1 StructParent number, #2 objref
162    {
163      \tl_gput_right:Ne \g__tag_parenttree_objr_tl
164        {
165          #1 \c_space_tl #2 ^^J
```

(*End of definition for* __tag_parenttree_add_objr:nn.)

\l_tag_parenttree_content_tl   A tl-var which will get the page related parenttree content.

```
168 \tl_new:N \l__tag_parenttree_content_tl
```

(*End of definition for* \l__tag_parenttree_content_tl.)

__tag_tree_fill_parenttree: This is the main command to assemble the page related entries of the parent tree. It wanders through the pages and the mcid numbers and collects all mcid of one page.

```
169 \cs_new_protected:Npn \__tag_tree_parenttree_rerun_msg: {}
170 \cs_new_protected:Npn \__tag_tree_fill_parenttree:
171   {

245          \__tag_tree_fill_parenttree:
246        }
247      \__tag_tree_parenttree_rerun_msg:
248      \tl_put_right:NV \l__tag_parenttree_content_tl\g__tag_parenttree_objr_tl
249      \pdf_object_write:nne  { __tag/tree/parenttree }{dict}
250        {
251          /Nums\c_space_tl [\l__tag_parenttree_content_tl]
252        }
253    }
```

(*End of definition for* __tag_tree_write_parenttree:.)

1.6 Rolemap dictionary

The Rolemap dictionary describes relations between new tags and standard types. The main part here is handled in the role module, here we only define the command which writes it to the PDF.

__tag/tree/rolemap   At first we reserve again an object. Rolemap is also used in PDF 2.0 as a fallback.

```
254 \pdf_object_new:n { __tag/tree/rolemap }
```

(*End of definition for* `__tag/tree/rolemap`.)

__tag_tree_write_rolemap: This writes out the rolemap, basically it simply pushes out the dictionary which has been filled in the role module.

```
255 \cs_new_protected:Npn \__tag_tree_write_rolemap:
256   {
257     \bool_if:NT \g__tag_role_add_mathml_bool
258       {
259         \prop_map_inline:Nn \g__tag_role_NS_mathml_prop
260           {
261             \prop_gput:Nnn \g__tag_role_rolemap_prop {##1}{Span}
262           }
263       }
264     \prop_map_inline:Nn\g__tag_role_rolemap_prop
265       {
266         \tl_if_eq:nnF {##1}{##2}
267           {
268             \pdfdict_gput:nne {g__tag_role/RoleMap_dict}
269             {##1}
270             {\pdf_name_from_unicode_e:n{##2}}
271           }
272       }
273     \pdf_object_write:nne  { __tag/tree/rolemap }{dict}
274       {
275         \pdfdict_use:n{g__tag_role/RoleMap_dict}
276       }
277   }
```

(*End of definition for* `\__tag_tree_write_rolemap:`.)

1.7 Classmap dictionary

Classmap and attributes are setup in the struct module, here is only the code to write it out. It should only done if values have been used.

__tag_tree_write_classmap:

```
278 \cs_new_protected:Npn \__tag_tree_write_classmap:
279   {
280     \tl_clear:N \l__tag_tmpa_tl
```

We process the older sec for compability with the table code. TODO: check if still needed

```
281     \seq_map_inline:Nn \g__tag_attr_class_used_seq
282       {
283         \prop_gput:Nnn \g__tag_attr_class_used_prop {##1}{}
284       }
285     \prop_map_inline:Nn \g__tag_attr_class_used_prop
```

66

```
286        {
287          \tl_put_right:Ne \l__tag_tmpa_tl
288           {
289             ##1\c_space_tl
290             <<
291              \prop_item:Nn
292               \g__tag_attr_entries_prop
293               {##1}
294             >>
295            \iow_newline:
296           }
297        }
298      \tl_if_empty:NF
299        \l__tag_tmpa_tl
300        {
301          \pdf_object_new:n { __tag/tree/classmap }
302          \pdf_object_write:nne
303            { __tag/tree/classmap }
304            {dict}
305            { \l__tag_tmpa_tl }
306          \__tag_prop_gput:cne
307            { g__tag_struct_0_prop }
308            { ClassMap }
309            { \pdf_object_ref:n { __tag/tree/classmap }  }
310        }
311    }
```

(*End of definition for* __tag_tree_write_classmap:*.*)

1.8 Namespaces

Namespaces are handle in the role module, here is the code to write them out. Namespaces are only relevant for pdf2.0.

```
312 \pdf_object_new:n { __tag/tree/namespaces }
```

(*End of definition for* __tag/tree/namespaces*.*)

__tag_tree_write_namespaces:

```
313 \cs_new_protected:Npn \__tag_tree_write_namespaces:
314   {
315    \pdf_version_compare:NnF < {2.0}
316      {
317        \prop_map_inline:Nn \g__tag_role_NS_prop
318          {
319            \pdfdict_if_empty:nF {g__tag_role/RoleMapNS_##1_dict}
320              {
321                \pdf_object_write:nne {__tag/RoleMapNS/##1}{dict}
322                  {
323                    \pdfdict_use:n {g__tag_role/RoleMapNS_##1_dict}
324                  }
325                \pdfdict_gput:nne{g__tag_role/Namespace_##1_dict}
326                  {RoleMapNS}{\pdf_object_ref:n {__tag/RoleMapNS/##1}}
327              }
```

```
328          \pdf_object_write:nne{tag/NS/##1}{dict}
329            {
330                \pdfdict_use:n {g__tag_role/Namespace_##1_dict}
331            }
332        }
333      \pdf_object_write:nne {__tag/tree/namespaces}{array}
334        {
335            \prop_map_tokens:Nn \g__tag_role_NS_prop{\use_ii:nn}
336        }
337    }
338  }
```

(*End of definition for* `\__tag_tree_write_namespaces:`.)

1.9 Finishing the structure

This assembles the various parts. TODO (when tabular are done or if someone requests it): IDTree

`\__tag_finish_structure:`

```
339 \hook_new:n {tagpdf/finish/before}
340 \cs_new_protected:Npn \__tag_finish_structure:
341   {
342     \bool_if:NT\g__tag_active_tree_bool
343       {

375   }
376 ⟨/package⟩
```

(*End of definition for* __tag_finish_structure:.)

1.10 StructParents entry for Page

We need to add to the Page resources the StructParents entry, this is simply the absolute page number.

```
377 ⟨*package⟩
378 \hook_gput_code:nnn{begindocument}{tagpdf}
379   {
380      \bool_if:NT\g__tag_active_tree_bool
381        {
382          \hook_gput_code:nnn{shipout/before} { tagpdf/structparents }
383            {
384              \pdfmanagement_add:nne
385                { Page }
386                { StructParents }
387                { \int_eval:n { \g_shipout_readonly_int} }
388            }
389        }
390   }
391 ⟨/package⟩
```

69

Part IV

The **tagpdf-mc-shared** module
Code related to Marked Content (mc-chunks), code shared by all modes
Part of the tagpdf package

1   Public Commands

`\tag_mc_begin:n`
`\tag_mc_end:`

`\tag_mc_begin:n{⟨key-values⟩}`
`\tag_mc_end:`

These commands insert the end code of the marked content. They don't end a group and in generic mode it doesn't matter if they are in another group as the starting commands. In generic mode both commands check if they are correctly nested and issue a warning if not.

`\tag_mc_use:n`

`\tag_mc_use:n{⟨label⟩}`

These command allow to record a marked content that was stashed away before into the current structure. A marked content can be used only once – the command will issue a warning if an mc is use a second time.

`\tag_mc_artifact_group_begin:n`
`\tag_mc_artifact_group_end:`

`\tag_mc_artifact_group_begin:n {⟨name⟩}`
`\tag_mc_artifact_group_end:`

New: 2019-11-20

This command pair creates a group with an artifact marker at the begin and the end. Inside the group the tagging commands are disabled. It allows to mark a complete region as artifact without having to worry about user commands with tagging commands. ⟨name⟩ should be a value allowed also for the `artifact` key. It pushes and pops mc-chunks at the begin and end. TODO: document is in tagpdf.tex

`\tag_mc_end_push:`
`\tag_mc_begin_pop:n`

`\tag_mc_end_push:`
`\tag_mc_begin_pop:n{⟨key-values⟩}`

New: 2021-04-22

If there is an open mc chunk, `\tag_mc_end_push:` ends it and pushes its tag of the (global) stack. If there is no open chunk, it puts −1 on the stack (for debugging) `\tag_mc_begin_pop:n` removes a value from the stack. If it is different from −1 it opens a tag with it. The reopened mc chunk looses info like the alt text for now.

`\tag_mc_if_in_p:` ⋆
`\tag_mc_if_in:TF` ⋆

`\tag_mc_if_in:TF {⟨true code⟩} {⟨false code⟩}`

Determines if a mc-chunk is open.

`\tag_mc_reset_box:N` ⋆   `\tag_mc_reset_box:N {⟨box⟩}`

This resets in lua mode the mc attributes to the one currently in use. It does nothing in generic mode.

2 Public keys

The following keys can be used with `\tag_mc_begin:n`, `\tagmcbegin`, `\tag_mc_begin_pop:n`,

`tag␣(mc-key)`   This key is required, unless artifact is used. The value is a tag like `P` or `H1` without a slash at the begin, this is added by the code. It is possible to setup new tags. The value of the key is expanded, so it can be a command. The expansion is passed unchanged to the PDF, so it should with a starting slash give a valid PDF name (some ascii with numbers like `H4` is fine).

`artifact␣(mc-key)`   This will setup the marked content as an artifact. The key should be used for content that should be ignored. The key can take one of the values `pagination`, `layout`, `page`, `background` and `notype` (this is the default).

`raw␣(mc-key)`   This key allows to add more entries to the properties dictionary. The value must be correct, low-level PDF. E.g. `raw=/Alt (Hello)` will insert an alternative Text.

`alt␣(mc-key)`   This key inserts an `/Alt` value in the property dictionary of the BDC operator. The value is handled as verbatim string, commands are not expanded. The value will be expanded first once. If it is empty, nothing will happen.

`actualtext␣(mc-key)`   This key inserts an `/ActualText` value in the property dictionary of the BDC operator. The value is handled as verbatim string, commands are not expanded. The value will be expanded first once. If it is empty, nothing will happen.

`label␣(mc-key)`   This key sets a label by which one can call the marked content later in another structure (if it has been stashed with the `stash` key). Internally the label name will start with `tagpdf-`.

`stash␣(mc-key)`   This "stashes" an mc-chunk: it is not inserted into the current structure. It should be normally be used along with a label to be able to use the mc-chunk in another place.

The code is splitted into three parts: code shared by all engines, code specific to luamode and code not used by luamode.

3 Marked content code – shared

2 ⟨∗header⟩
3 \ProvidesExplPackage {tagpdf-mc-code-shared} {2024-03-27} {0.99a}
4   {part of tagpdf - code related to marking chunks -
5   code shared by generic and luamode }
6 ⟨/header⟩

3.1 Variables and counters

MC chunks must be counted. I use a latex counter for the absolute count, so that it is added to \cl@@ckpt and restored e.g. in tabulars and align. \int_new:N \c@g_@@_MCID_abs_int and \tl_put_right:Nn\cl@@ckpt{\@elt{g_@@_MCID_abs_int}} would work too, but as the name is not expl3 then too, why bother? The absolute counter can be used to label and to check if the page counter needs a reset.

g__tag_MCID_abs_int

7 ⟨∗base⟩
8 \newcounter { g__tag_MCID_abs_int }

(*End of definition for* g__tag_MCID_abs_int.)

__tag_get_data_mc_counter: This command allows \tag_get:n to get the current state of the mc counter with the keyword mc_counter. By comparing the numbers it can be used to check the number of structure commands in a piece of code.

9 \cs_new:Npn __tag_get_data_mc_counter:
10   {
11   \int_use:N \c@g__tag_MCID_abs_int
12   }
13 ⟨/base⟩

(*End of definition for* __tag_get_data_mc_counter:.)

__tag_get_mc_abs_cnt: A (expandable) function to get the current value of the cnt. TODO: duplicate of the previous one, this should be cleaned up.

14 ⟨∗shared⟩
15 \cs_new:Npn __tag_get_mc_abs_cnt: { \int_use:N \c@g__tag_MCID_abs_int }

(*End of definition for* __tag_get_mc_abs_cnt:.)

\g__tag_in_mc_bool   This booleans record if a mc is open, to test nesting.

16 \bool_new:N \g__tag_in_mc_bool

(*End of definition for* \g__tag_in_mc_bool.)

\g__tag_mc_parenttree_prop   For every chunk we need to know the structure it is in, to record this in the parent tree. We store this in a property.
key: absolute number of the mc (tagmcabs)
value: the structure number the mc is in

17 __tag_prop_new_linked:N \g__tag_mc_parenttree_prop

(*End of definition for* \g__tag_mc_parenttree_prop.)

\g__tag_mc_parenttree_prop   Some commands (e.g. links) want to close a previous mc and reopen it after they did their work. For this we create a stack:

```
18 \seq_new:N \g__tag_mc_stack_seq
```

(*End of definition for* \g__tag_mc_parenttree_prop.)

\l__tag_mc_artifact_type_tl   Artifacts can have various types like Pagination or Layout. This stored in this variable.

```
19 \tl_new:N \l__tag_mc_artifact_type_tl
```

(*End of definition for* \l__tag_mc_artifact_type_tl.)

\l__tag_mc_key_stash_bool
\l__tag_mc_artifact_bool   This booleans store the stash and artifact status of the mc-chunk.

```
20 \bool_new:N \l__tag_mc_key_stash_bool
21 \bool_new:N \l__tag_mc_artifact_bool
```

(*End of definition for* \l__tag_mc_key_stash_bool *and* \l__tag_mc_artifact_bool.)

\l__tag_mc_key_tag_tl
\g__tag_mc_key_tag_tl
\l__tag_mc_key_label_tl
\l__tag_mc_key_properties_tl   Variables used by the keys. \l_@@_mc_key_properties_tl will collect a number of values. TODO: should this be a pdfdict now?

```
22 \tl_new:N \l__tag_mc_key_tag_tl
23 \tl_new:N \g__tag_mc_key_tag_tl
24 \tl_new:N \l__tag_mc_key_label_tl
25 \tl_new:N \l__tag_mc_key_properties_tl
```

(*End of definition for* \l__tag_mc_key_tag_tl *and others.*)

3.2 Functions

__tag_mc_handle_mc_label:e   The commands labels a mc-chunk. It is used if the user explicitly labels the mc-chunk with the `label` key. The argument is the value provided by the user. It stores the attributes
`tagabspage`: the absolute page, \g_shipout_readonly_int,
`tagmcabs`: the absolute mc-counter \c@g_@@_MCID_abs_int. The reference command is based on l3ref.

```
26 \cs_new:Npn \__tag_mc_handle_mc_label:e #1
27   {
28     \__tag_property_record:en{tagpdf-#1}{tagabspage,tagmcabs}
29   }
```

(*End of definition for* __tag_mc_handle_mc_label:e.)

__tag_mc_set_label_used:n   Unlike with structures we can't check if a labeled mc has been used by looking at the P key, so we use a dedicated csname for the test

```
30 \cs_new_protected:Npn \__tag_mc_set_label_used:n #1 %#1 labelname
31   {
32     \tl_new:c { g__tag_mc_label_\tl_to_str:n{#1}_used_tl }
33   }
34 ⟨/shared⟩
```

(*End of definition for* __tag_mc_set_label_used:n.)

\tag_mc_use:n These command allow to record a marked content that was stashed away before into the current structure. A marked content can be used only once – the command will issue a warning if an mc is use a second time. The argument is a label name set with the `label` key.

TODO: is testing for struct the right test?

```
35 ⟨base⟩\cs_new_protected:Npn \tag_mc_use:n #1 { \__tag_whatsits: }
36 ⟨∗shared⟩
37 \cs_set_protected:Npn \tag_mc_use:n #1 %#1: label name
38   {
39     \__tag_check_if_active_struct:T
40       {
41         \tl_set:Ne  \l__tag_tmpa_tl { \__tag_property_ref:nnn{tagpdf-#1}{tagmcabs}{} }
42         \tl_if_empty:NTF\l__tag_tmpa_tl
43           {
44             \msg_warning:nnn {tag} {mc-label-unknown} {#1}
45           }
46           {
47             \cs_if_free:cTF { g__tag_mc_label_\tl_to_str:n{#1}_used_tl }
48               {
49                 \__tag_mc_handle_stash:e { \l__tag_tmpa_tl }
50                 \__tag_mc_set_label_used:n {#1}
51               }
52               {
53                 \msg_warning:nnn {tag}{mc-used-twice}{#1}
54               }
55           }
56       }
57   }
58 ⟨/shared⟩
```

(*End of definition for* \tag_mc_use:n. *This function is documented on page 70.*)

\tag_mc_artifact_group_begin:n   This opens an artifact of the type given in the argument, and then stops all tagging. It
\tag_mc_artifact_group_end: creates a group. It pushes and pops mc-chunks at the begin and end.

```
59 ⟨base⟩\cs_new_protected:Npn \tag_mc_artifact_group_begin:n #1 {}
60 ⟨base⟩\cs_new_protected:Npn \tag_mc_artifact_group_end:{}
61 ⟨∗shared⟩
62 \cs_set_protected:Npn \tag_mc_artifact_group_begin:n #1
63   {
64   \tag_mc_end_push:
65   \tag_mc_begin:n {artifact=#1}
66   \group_begin:
67   \tag_stop:n{artifact-group}
68   }
69
70 \cs_set_protected:Npn \tag_mc_artifact_group_end:
71   {
72   \tag_start:n{artifact-group}
73   \group_end:
74   \tag_mc_end:
75   \tag_mc_begin_pop:n{}
76   }
77 ⟨/shared⟩
```

74

(End of definition for `\tag_mc_artifact_group_begin:n` *and* `\tag_mc_artifact_group_end:`. *These functions are documented on page 70.)*

`\tag_mc_reset_box:N` This allows to reset the mc-attributes in box. On base and generic mode it should do nothing.

```
78 ⟨base⟩\cs_new_protected:Npn \tag_mc_reset_box:N #1 {}
```

(End of definition for `\tag_mc_reset_box:N`. *This function is documented on page 71.)*

`\tag_mc_end_push:`
`\tag_mc_begin_pop:n`

```
79 ⟨base⟩\cs_new_protected:Npn \tag_mc_end_push: {}

Part V

The **tagpdf-mc-generic** module
Code related to Marked Content
(mc-chunks), generic mode
Part of the tagpdf package

1   Marked content code – generic mode

```
1 ⟨@@=tag⟩
2 ⟨*generic⟩
3 \ProvidesExplPackage {tagpdf-mc-code-generic} {2024-03-27} {0.99a}
4   {part of tagpdf - code related to marking chunks - generic mode}
5 ⟨/generic⟩
6 ⟨*debug⟩
7 \ProvidesExplPackage {tagpdf-debug-generic} {2024-03-27} {0.99a}
8   {part of tagpdf - debugging code related to marking chunks - generic mode}
9 ⟨/debug⟩
```

1.1   Variables

```
10 ⟨*generic⟩
```

\l__tag_mc_ref_abspage_tl   We need a ref-label system to ensure that the MCID cnt restarts at 0 on a new page This will be used to store the tagabspage attribute retrieved from a label.

```
11 \tl_new:N \l__tag_mc_ref_abspage_tl
```

(*End of definition for* \l__tag_mc_ref_abspage_tl.)

\l__tag_mc_tmpa_tl   temporary variable

```
12 \tl_new:N \l__tag_mc_tmpa_tl
```

(*End of definition for* \l__tag_mc_tmpa_tl.)

\g__tag_mc_marks   a marks register to keep track of the mc's at page breaks and a sequence to keep track of the data for the continuation extra-tmb. We probably will need to track mc-marks in more than one stream, so the seq contains the name of the stream.

```
13 \newmarks   \g__tag_mc_marks
```

(*End of definition for* \g__tag_mc_marks.)

\g__tag_mc_main_marks_seq   Each stream has an associated global seq variable holding the bottom marks from the/a
\g_tag_mc_footnote_marks_seq   previous chunk in the stream. We provide three by default: main, footnote and multicol.
\g_tag_mc_multicol_marks_seq   TODO: perhaps an interface for more streams will be needed.

```
14 \seq_new:N \g__tag_mc_main_marks_seq
15 \seq_new:N \g__tag_mc_footnote_marks_seq
16 \seq_new:N \g__tag_mc_multicol_marks_seq
```

(*End of definition for* \g__tag_mc_main_marks_seq, \g__tag_mc_footnote_marks_seq, *and* \g__tag_-mc_multicol_marks_seq.)

`\l__tag_mc_firstmarks_seq`
`\l__tag_mc_botmarks_seq`

The marks content contains a number of data which we will have to access and compare, so we will store it locally in two sequences. topmarks is unusable in LaTeX so we ignore it.

```
17 \seq_new:N  \l__tag_mc_firstmarks_seq
18 \seq_new:N  \l__tag_mc_botmarks_seq
```

(*End of definition for* `\l__tag_mc_firstmarks_seq` *and* `\l__tag_mc_botmarks_seq`.)

1.2 Functions

`\__tag_mc_begin_marks:nn`
`\__tag_mc_artifact_begin_marks:n`
`\__tag_mc_end_marks:`

Generic mode need to set marks for the page break and split stream handling. We always set two marks to be able to detect the case when no mark is on a page/galley. MC-begin commands will set (b,-,data) and (b,+,data), MC-end commands will set (e,-,data) and (e,+,data).

```

```

(*End of definition for* `\__tag_mc_store:nnn`.)

`\__tag_mc_insert_extra_tmb:n`
`\__tag_mc_insert_extra_tme:n`

These two functions should be used in the output routine at the place where a mc-literal could be missing due to a page break or some other split. They check (with the help of the marks) if a extra-tmb or extra-tme is needed. The tmb command stores also the mc into the structure, the tme has to store the data for a following extra-tmb. The argument takes a stream name like main or footnote to allow different handling there. The content of the marks must be stored before (with `\@@_mc_get_marks:` or manually) into `\l_@@_mc_firstmarks_seq` and `\l_@@_mc_botmarks_seq` so that the tests can use them.

```
 104  \cs_new_protected:Npn \__tag_mc_insert_extra_tmb:n #1 % #1 stream: e.g. main or footnote

```

(*End of definition for* `\__tag_mc_insert_extra_tmb:n` *and* `\__tag_mc_insert_extra_tme:n`.)

1.3 Looking at MC marks in boxes

`\__tag_add_missing_mcs:Nn` Assumptions:

- test for tagging active outside;

- mark retrieval also outside.

This takes a box register as its first argument (or the register number in a count register, as used by multicol). It adds an extra tmb at the top of the box if necessary and similarly an extra tme at the end. This is done by adding hboxes in a way that the positioning and the baseline of the given box is not altered. The result is written back to the box.

The second argument is the stream this box belongs to und is currently either main for the main galley, footnote for footnote note text, or multicol for boxes produced for columns in that environment. Other streams may follow over time.

```
163 \cs_new_protected:Npn\__tag_add_missing_mcs:Nn #1 #2 {
164   \vbadness \@M
165   \vfuzz     \c_max_dim
166   \vbox_set_to_ht:Nnn #1 { \box_ht:N #1 } {
167     \hbox_set:Nn \l__tag_tmpa_box { \__tag_mc_insert_extra_tmb:n {#2} }
168     \hbox_set:Nn \l__tag_tmpb_box { \__tag_mc_insert_extra_tme:n {#2} }
169     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
170         {
```

81

```
171            \seq_log:c { g__tag_mc_#2_marks_seq}
172          }
```

The box placed on the top gets zero size and thus will not affect the box dimensions of the box we are modifying.

```
173        \box_set_ht:Nn \l__tag_tmpa_box \c_zero_dim
174        \box_set_dp:Nn \l__tag_tmpa_box \c_zero_dim
```

The box added at the bottom will get the depth of the original box. This way we can arrange that from the outside everything looks as before.

```
175        \box_set_ht:Nn \l__tag_tmpb_box \c_zero_dim
176        \box_set_dp:Nn \l__tag_tmpb_box { \box_dp:N #1 }
```

We need to set `\boxmaxdepth` in case the original box has an unusually large depth, otherwise that depth is not preserved when we string things together.

```
177        \boxmaxdepth \@maxdepth
178        \box_use_drop:N        \l__tag_tmpa_box
179        \vbox_unpack_drop:N     #1
```

Back up by the depth of the box as we add that later again.

```
180        \tex_kern:D -\box_dp:N \l__tag_tmpb_box
```

And we don't want any glue added when we add the box.

```
181        \nointerlineskip
182        \box_use_drop:N \l__tag_tmpb_box
183      }
184    }
```

(*End of definition for* `\__tag_add_missing_mcs:Nn.`)

`\__tag_add_missing_mcs_to_stream:Nn`   This is the main command to add mc to the stream. It is therefor guarded by the mc-boolean.

   If we aren't in the main stream then processing is a bit more complicated because to get at the marks in the box we need to artifically split it and then look at the split marks.

   First argument is the box to update and the second is the "stream". In lua mode the command is a no-op.

```
185  \cs_new_protected:Npn \__tag_add_missing_mcs_to_stream:Nn #1#2
186    {
187      \__tag_check_if_active_mc:T {
```

First set up a temp box for trial splitting.

```
188        \vbadness\maxdimen
189        \box_set_eq:NN \l__tag_tmpa_box #1
```

Split the box to the largest size available. This should give us all content (but to be sure that there is no issue we could test out test box is empty now (not done).

```
190        \vbox_set_split_to_ht:NNn \l__tag_tmpa_box \l__tag_tmpa_box \c_max_dim
```

As a side effect of this split we should now have the first and bottom split marks set up. We use this to set up `\l__tag_mc_firstmarks_seq`

```
191        \exp_args:NNe
192        \seq_set_from_clist:Nn \l__tag_mc_firstmarks_seq
193            { \tex_splitfirstmarks:D \g__tag_mc_marks }
```

Some debugging info:

```
194 %     \iow_term:n { First~ mark~ from~ this~ box: }
195 %     \seq_log:N \l__tag_mc_firstmarks_seq
```

If this mark was empty then clearly the bottom mark will too be empty. Thus in this case we make use of the saved bot mark from the previous chunk. Note that if this is the first chunk in the stream the global seq would contain a random value, but then we can't end in this branch because the basis assumption is that streams are properly marked up so the first chunk would always have a mark at the beginning!

```
196     \seq_if_empty:NTF \l__tag_mc_firstmarks_seq
197       {
198         \__tag_check_typeout_v:n
199           {
200             No~ marks~ so~ use~ saved~ bot~ mark:~
201             \seq_use:cn {g__tag_mc_#2_marks_seq} {,~} \iow_newline:
202           }
203         \seq_set_eq:Nc \l__tag_mc_firstmarks_seq {g__tag_mc_#2_marks_seq}
```

We also update the bot mark to the same value so that we can later apply `\__tag_add_-missing_mcs:Nn` with the data structures in place (see assumptions made there).

```
204         \seq_set_eq:NN \l__tag_mc_botmarks_seq \l__tag_mc_firstmarks_seq
205       }
```

If there was a first mark then there is also a bot mark (and it can't be the same as our marks always come in pairs). So if that branch is chosen we update `\l__tag_mc_-botmarks_seq` from the bot mark.

```
206       {
207         \__tag_check_typeout_v:n
208           {
209             Pick~ up~ new~ bot~ mark!
210           }
211         \exp_args:NNe
212         \seq_set_from_clist:Nn \l__tag_mc_botmarks_seq
213           { \tex_splitbotmarks:D   \g__tag_mc_marks }
214       }
```

Finally we call `\__tag_add_missing_mcs:Nn` to add any missing tmb/tme as needed,

```
215     \__tag_add_missing_mcs:Nn #1 {#2}
216 %%
217     \seq_gset_eq:cN  {g__tag_mc_#2_marks_seq} \l__tag_mc_botmarks_seq
218 %%
219   }
220 }
```

(*End of definition for* `\__tag_add_missing_mcs_to_stream:Nn`.)

`\__tag_mc_if_in_p:`
`\__tag_mc_if_in:TF`
`\tag_mc_if_in_p:`
`\tag_mc_if_in:TF`

This is a test if a mc is open or not. It depends simply on a global boolean: mc-chunks are added linearly so nesting should not be relevant.

One exception are header and footer (perhaps they are more, but for now it doesn't seem so, so there are no dedicated code to handle this situation): When they are built and added to the page we could be both inside or outside a mc-chunk. But header and footer should ignore this and not push/pop or warn about nested mc. It is therefore important there to set and reset the boolean manually. See the tagpddocu-patches.sty for an example.

```
221 \prg_new_conditional:Nnn \__tag_mc_if_in: {p,T,F,TF}
222   {
223     \bool_if:NTF \g__tag_in_mc_bool
224       { \prg_return_true:  }
225       { \prg_return_false: }
226   }
227
228 \prg_new_eq_conditional:NNn \tag_mc_if_in: \__tag_mc_if_in: {p,T,F,TF}
```

(*End of definition for* `\__tag_mc_if_in:TF` *and* `\tag_mc_if_in:TF`*. This function is documented on page 70.*)

__tag_mc_bmc:n   These are the low-level commands. There are now equal to the pdfmanagement com-
__tag_mc_emc: mands generic mode, but we use an indirection in case luamode need something else.
__tag_mc_bdc:nn   change 04.08.2018: the commands do not check the validity of the arguments or try to
                   escape them, this should be done before using them. change 2023-08-18: we are delaying
                   the writing to the shipout.

```
229 % #1 tag, #2 properties
230 \cs_set_eq:NN \__tag_mc_bmc:n  \pdf_bmc:n
231 \cs_set_eq:NN \__tag_mc_emc:    \pdf_emc:
232 \cs_set_eq:NN \__tag_mc_bdc:nn \pdf_bdc:nn
233 \cs_set_eq:NN \__tag_mc_bdc_shipout:ee \pdf_bdc_shipout:ee
```

(*End of definition for* `\__tag_mc_bmc:n` *,* `\__tag_mc_emc:` *, and* `\__tag_mc_bdc:nn`*.*)

__tag_mc_bdc_mcid:nn   This create a BDC mark with an /MCID key. Most of the work here is to get the current
__tag_mc_bdc_mcid:n   number value for the MCID: they must be numbered by page starting with 0 and then
__tag_mc_handle_mcid:nn   successively. The first argument is the tag, e.g. P or Span, the second is used to pass
__tag_mc_handle_mcid:VV   more properties. Starting with texlive 2023 this is much simpler and faster as we can
                           use delay the numbering to the shipout. We also define a wrapper around the low-level
                           command as luamode will need something different.

```
234 \bool_if:NTF\g__tag_delayed_shipout_bool
235   {
236     \hook_gput_code:nnn {shipout/before}{tagpdf}{ \flag_clear:n { __tag/mcid } }
237     \cs_set_protected:Npn \__tag_mc_bdc_mcid:nn #1 #2
238       {
239         \int_gincr:N \c@g__tag_MCID_abs_int
240         \__tag_property_record:eV
241           {
242             mcid-\int_use:N \c@g__tag_MCID_abs_int
243           }
244         \c__tag_property_mc_clist
245         \__tag_mc_bdc_shipout:ee
246           {#1}
247           {
248             /MCID~\flag_height:n { __tag/mcid }
249             \flag_raise:n { __tag/mcid }~  #2
250           }
251       }
252   }
```

if the engine is too old, we have to revert to earlier method.

__tag_mc_handle_stash:n
__tag_mc_handle_stash:e

This is the handler which puts a mc into the the current structure. The argument is the number of the mc. Beside storing the mc into the structure, it also has to record the structure for the parent tree. The name is a bit confusing, it does *not* handle mc with the stash key .... TODO: why does luamode use it for begin + use, but generic mode only for begin?

```
322  \cs_new_protected:Npn \__tag_mc_handle_stash:n #1 %1 mcidnum
323    {
324      \__tag_check_mc_used:n {#1}
325      \__tag_struct_kid_mc_gput_right:nn

329        {#1}
330        { \g__tag_struct_stack_current_tl }
331    }
332  \cs_generate_variant:Nn \__tag_mc_handle_stash:n { e }
```

(End of definition for __tag_mc_handle_stash:n*.)*

__tag_mc_bmc_artifact:
__tag_mc_bmc_artifact:n
__tag_mc_handle_artifact:N

Two commands to create artifacts, one without type, and one with. We define also a wrapper handler as luamode will need a different definition. TODO: perhaps later: more properties for artifacts

```
333  \cs_new_protected:Npn  \__tag_mc_bmc_artifact:
334    {
335      \__tag_mc_bmc:n {Artifact}
336    }
337  \cs_new_protected:Npn \__tag_mc_bmc_artifact:n #1
338    {
339      \__tag_mc_bdc:nn {Artifact}{/Type/#1}
340    }
341  \cs_new_protected:Npn \__tag_mc_handle_artifact:N #1
342    % #1 is a var containing the artifact type
343    {
344      \int_gincr:N \c@g__tag_MCID_abs_int
345      \tl_if_empty:NTF #1
346        { \__tag_mc_bmc_artifact: }
347        { \exp_args:NV\__tag_mc_bmc_artifact:n #1 }
348    }
```

86

(*End of definition for* `\__tag_mc_bmc_artifact:` , `\__tag_mc_bmc_artifact:n` , *and* `\__tag_mc_handle_-` `artifact:N`.)

`\__tag_get_data_mc_tag:`   This allows to retrieve the active mc-tag. It is use by the get command.

```
349 \cs_new:Nn \__tag_get_data_mc_tag: { \g__tag_mc_key_tag_tl }
350 ⟨/generic⟩
```

(*End of definition for* `\__tag_get_data_mc_tag:`.)

`\tag_mc_begin:n`
`\tag_mc_end:`   These are the core public commands to open and close an mc. They don't need to be in the same group or grouping level, but the code expect that they are issued linearly. The tag and the state is passed to the end command through a global var and a global boolean.

```

Part VI

The **tagpdf-mc-luacode** module Code related to Marked Content (mc-chunks), luamode-specific Part of the tagpdf package

The code is splitted into three parts: code shared by all engines, code specific to luamode and code not used by luamode.

1 Marked content code – luamode code

luamode uses attributes to mark mc-chunks. The two attributes used are defined in the backend file. The backend also load the lua file, as it can contain functions needed elsewhere. The attributes for mc are global (between 0.6 and 0.81 they were local but this was reverted). The attributes are setup only in lua, and one should use the lua functions to set and get them.

`g_@@_mc_type_attr`: the value represent the type

`g_@@_mc_cnt_attr`: will hold the `\c@g_@@_MCID_abs_int` value

Handling attribute needs a different system to number the page wise mcid's: a `\tagmcbegin ... \tagmcend` pair no longer surrounds exactly one mc chunk: it can be split at page breaks. We know the included mcid(s) only after the ship out. So for the `struct -> mcid` mapping we need to record `struct -> mc-cnt` (in `\g_@@_mc_parenttree_prop` and/or a lua table and at shipout `mc-cnt-> {mcid, mcid, ...}` and when building the trees connect both.

Key definitions are overwritten for luatex to store that data in lua-tables. The data for the mc are in `ltx.@@.mc[absnum]`. The fields of the table are:

tag : the type (a string)

raw : more properties (string)

label: a string.

artifact: the presence indicates an artifact, the value (string) is the type.

kids: a array of tables

`{1={kid=num2,page=pagenum1}, 2={kid=num2,page=pagenum2},...}`,

this describes the chunks the mc has been split to by the traversing code

parent: the number of the structure it is in. Needed to build the parent tree.

```

```

(*End of definition for* tag (mc-key) *and others. These functions are documented on page* .)

Part VII

The **tagpdf-struct** module
Commands to create the structure
Part of the tagpdf package

1   Public Commands

\tag_struct_begin:n   \tag_struct_begin:n{⟨*key-values*⟩}
\tag_struct_end: \tag_struct_end:
\tag_struct_end:n   \tag_struct_end:n{⟨*tag*⟩}

These commands start and end a new structure. They don't start a group. They set all their values globally. \tag_struct_end:n does nothing special normally (apart from swallowing its argument, but if tagpdf-debug is loaded, it will check if the {⟨*tag*⟩} (after expansion) is identical to the current structure on the stack. The tag is not role mapped!

\tag_struct_use:n   \tag_struct_use:n{⟨*label*⟩}
\tag_struct_use_num:n   \tag_struct_use_num:n{⟨*structure number*⟩}

These commands insert a structure previously stashed away as kid into the currently active structure. A structure should be used only once, if the structure already has a parent a warning is issued.

\tag_struct_object_ref:n   \tag_struct_object_ref:n{⟨*struct number*⟩}
\tag_struct_object_ref:e

This is a small wrapper around \pdf_object_ref:n to retrieve the object reference of the structure with the number ⟨*struct number*⟩. This number can be retrieved and stored for the current structure for example with \tag_get:n{⟨$struct_num$⟩}. Be aware that it can only be used if the structure has already been created and that it doesn't check if the object actually exists!

The following two functions are used to add annotations. They must be used together and with care to get the same numbers. Perhaps some improvements are needed here.

\tag_struct_insert_annot:nn   \tag_struct_insert_annot:nn{⟨*object reference*⟩}{⟨*struct parent number*⟩}

This inserts an annotation in the structure. ⟨*object reference*⟩ is there reference to the annotation. ⟨*struct parent number*⟩ should be the same number as had been inserted with \tag_struct_parent_int: as StructParent value to the dictionary of the annotion. The command will increase the value of the counter used by \tag_struct_-parent_int:.

\tag_struct_parent_int: \tag_struct_parent_int:

This gives back the next free /StructParent number (assuming that it is together with \tag_struct_insert_annot:nn which will increase the number.

`\tag_struct_gput:nnn` `\tag_struct_gput:nnn{`⟨*structure number*⟩`}{`⟨*keyword*⟩`}{`⟨*value*⟩`}`

This is a command that allows to update the data of a structure. This often can't done simply by replacing the value, as we have to preserve and extend existing content. We use therefore dedicated functions adjusted to the key in question. The first argument is the number of the structure, the second a keyword referring to a function, the third the value. Currently the only keyword is `ref` which updates the Ref key (an array)

2 Public keys

2.1 Keys for the structure commands

`tag␣(struct-key)` This is required. The value of the key is normally one of the standard types listed in the main tagpdf documentation. It is possible to setup new tags/types. The value can also be of the form `type/NS`, where `NS` is the shorthand of a declared name space. Currently the names spaces `pdf`, `pdf2`, `mathml` and `user` are defined. This allows to use a different name space than the one connected by default to the tag. But normally this should not be needed.

`stash␣(struct-key)` Normally a new structure inserts itself as a kid into the currently active structure. This key prohibits this. The structure is nevertheless from now on "the current active structure" and parent for following marked content and structures.

`label␣(struct-key)` This key sets a label by which one can refer to the structure. It is e.g. used by `\tag_struct_use:n` (where a real label is actually not needed as you can only use structures already defined), and by the `ref` key (which can refer to future structures). Internally the label name will start with `tagpdfstruct-` and it stores the two attributes `tagstruct` (the structure number) and `tagstructobj` (the object reference).

`parent␣(struct-key)` By default a structure is added as kid to the currently active structure. With the parent key one can choose another parent. The value is a structure number which must refer to an already existing, previously created structure. Such a structure number can for example be have been stored with `\tag_get:n`, but one can also use a label on the parent structure and then use `\property_ref:nn{tagpdfstruct-label}{tagstruct}` to retrieve it.

`title␣(struct-key)`
`title-o␣(struct-key)` This keys allows to set the dictionary entry `/Title` in the structure object. The value is handled as verbatim string and hex encoded. Commands are not expanded. `title-o` will expand the value once.

`alt␣(struct-key)` This key inserts an `/Alt` value in the dictionary of structure object. The value is handled as verbatim string and hex encoded. The value will be expanded first once. If it is empty, nothing will happen.

actualtext␣(struct-key) This key inserts an `/ActualText` value in the dictionary of structure object. The value is handled as verbatim string and hex encoded. The value will be expanded first once. If it is empty, nothing will happen.

lang␣(struct-key) This key allows to set the language for a structure element. The value should be a bcp-identifier, e.g. `de-De`.

ref␣(struct-key) This key allows to add references to other structure elements, it adds the `/Ref` array to the structure. The value should be a comma separated list of structure labels set with the `label` key. e.g. `ref={label1,label2}`.

E␣(struct-key) This key sets the `/E` key, the expanded form of an abbreviation or an acronym (I couldn't think of a better name, so I sticked to E).

AF␣(struct-key)
AFref␣(struct-key)
AFinline␣(struct-key)
AFinline-o␣(struct-key)
texsource
mathml

```
AF = ⟨object name⟩
AFref = ⟨object reference⟩
AF-inline = ⟨text content⟩
```

These keys allows to reference an associated file in the structure element. The value ⟨object name⟩ should be the name of an object pointing to the `/Filespec` dictionary as expected by `\pdf_object_ref:n` from a current l3kernel.

The value `AF-inline` is some text, which is embedded in the PDF as a text file with mime type text/plain. `AF-inline-o` is like `AF-inline` but expands the value once.

Future versions will perhaps extend this to more mime types, but it is still a research task to find out what is really needed.

`texsource` is a special variant of `AF-inline-o` which embeds the file as `.tex` source with the `/AFrelationship` key set to `/Source`. It also sets the `/Desc` key to a (currently) fix text.

`mathml` is a special variant of `AF-inline-o` which embeds the file as `.xml` file with the `/AFrelationship` key set to `/Supplement`. It also sets the `/Desc` key to a (currently) fix text.

The argument of `AF` is an object name referring an embedded file as declared for example with `\pdf_object_new:n` or with the l3pdffile module. `AF` expands its argument (this allows e.g. to use some variable for automatic numbering) and can be used more than once, to associate more than one file.

The argument of `AFref` is an object reference to an embedded file or a variable expanding to such a object reference in the format as you would get e.g. from `\pdf_object_ref_last:` or `\pdf_object_ref:n` (and which is different for the various engines!). The key allows to make use of anonymous objects. Like `AF` the `AFref` key expands its argument and can be used more than once, to associate more than one file. *It does not check if the reference is valid!*

The inline keys can be used only once per structure. Additional calls are ignored.

attribute␣(struct-key) This key takes as argument a comma list of attribute names (use braces to protect the commas from the external key-val parser) and allows to add one or more attribute dictionary entries in the structure object. As an example

```
\tagstructbegin{tag=TH,attribute= TH-row}
```

Attribute names and their content must be declared first in `\tagpdfsetup`.

attribute-class␣(struct-key)

This key takes as argument a comma list of attribute class names (use braces to protect the commas from the external key-val parser) and allows to add one or more attribute classes to the structure object.

Attribute class names and their content must be declared first in `\tagpdfsetup`.

2.2 Setup keys

role/new-attribute␣(setup-key) role/new-attribute = {⟨*name*⟩}{⟨*Content*⟩}
newattribute␣(deprecated)

This key can be used in the setup command `\tagpdfsetup` and allow to declare a new attribute, which can be used as attribute or attribute class. The value are two brace groups, the first contains the name, the second the content.

```
\tagpdfsetup
 {
  role/new-attribute =
   {TH-col}{/O /Table /Scope /Column},
  role/new-attribute =
   {TH-row}{/O /Table /Scope /Row},
  }
```

root-AF␣(setup-key) root-AF = ⟨*object name*⟩

This key can be used in the setup command `\tagpdfsetup` and allows to add associated files to the root structure. Like `AF` it can be used more than once to add more than one file.

```
1 ⟨@@=tag⟩
2 ⟨*header⟩
3 \ProvidesExplPackage {tagpdf-struct-code} {2024-03-27} {0.99a}
4   {part of tagpdf - code related to storing structure}
5 ⟨/header⟩
```

3 Variables

`\c@g__tag_struct_abs_int` Every structure will have a unique, absolute number. I will use a latex counter for the structure count to have a chance to avoid double structures in align etc.

```
6 ⟨base⟩\newcounter  { g__tag_struct_abs_int }
7 ⟨base⟩\int_gzero:N \c@g__tag_struct_abs_int
```

(*End of definition for* `\c@g__tag_struct_abs_int`.)

\g__tag_struct_objR_seq   a sequence to store mapping between the structure number and the object number. We assume that structure numbers are assign consecutively and so the index of the seq can be used. A seq allows easy mapping over the structures.

```
8 ⟨*package⟩
9 \__tag_seq_new:N  \g__tag_struct_objR_seq
```

(*End of definition for* `\g__tag_struct_objR_seq`.)

\c__tag_struct_null_tl   In lua mode we have to test if the kids a null

```
10 \tl_const:Nn\c__tag_struct_null_tl {null}
```

(*End of definition for* `\c__tag_struct_null_tl`.)

\g__tag_struct_cont_mc_prop   in generic mode it can happen after a page break that we have to inject into a structure sequence an additional mc after. We will store this additional info in a property. The key is the absolut mc num, the value the pdf directory.

```
11 \__tag_prop_new:N  \g__tag_struct_cont_mc_prop
```

(*End of definition for* `\g__tag_struct_cont_mc_prop`.)

\g__tag_struct_stack_seq   A stack sequence for the structure stack. When a sequence is opened it's number is put on the stack.

```
12 \seq_new:N     \g__tag_struct_stack_seq
13 \seq_gpush:Nn \g__tag_struct_stack_seq {0}
```

(*End of definition for* `\g__tag_struct_stack_seq`.)

\g__tag_struct_tag_stack_seq   We will perhaps also need the tags. While it is possible to get them from the numbered stack, lets build a tag stack too.

```
14 \seq_new:N     \g__tag_struct_tag_stack_seq
15 \seq_gpush:Nn \g__tag_struct_tag_stack_seq {{Root}{StructTreeRoot}}
```

(*End of definition for* `\g__tag_struct_tag_stack_seq`.)

\g_tag_struct_stack_current_tl
\l__tag_struct_stack_parent_tmpa_tl   The global variable will hold the current structure number. It is already defined in `tagpdf-base`. The local temporary variable will hold the parent when we fetch it from the stack.

```
16 ⟨/package⟩
17 ⟨base⟩\tl_new:N  \g__tag_struct_stack_current_tl
18 ⟨base⟩\tl_gset:Nn \g__tag_struct_stack_current_tl {\int_use:N\c@g__tag_struct_abs_int}
19 ⟨*package⟩
20 \tl_new:N       \l__tag_struct_stack_parent_tmpa_tl
```

(*End of definition for* `\g__tag_struct_stack_current_tl` *and* `\l__tag_struct_stack_parent_tmpa_tl`.)

I will need at least one structure: the StructTreeRoot normally it should have only one kid, e.g. the document element.

The data of the StructTreeRoot and the StructElem are in properties: `\g_@@_struct_0_prop` for the root and `\g_@@_struct_N_prop`, $N >= 1$ for the other.

This creates quite a number of properties, so perhaps we will have to do this more efficiently in the future.

All properties have at least the keys

104

Type StructTreeRoot or StructElem

and the keys from the two following lists (the root has a special set of properties). the values of the prop should be already escaped properly when the entries are created (title,lange,alt,E,actualtext)

<code>\c__tag_struct_StructTreeRoot_entries_seq</code>
<code>\c__tag_struct_StructElem_entries_seq</code>

These seq contain the keys we support in the two object types. They are currently no longer used, but are provided as documentation and for potential future checks. They should be adapted if there are changes in the PDF format.

```
21 \seq_const_from_clist:Nn \c__tag_struct_StructTreeRoot_entries_seq
22   {%p. 857/858
23     Type,               % always /StructTreeRoot

```

(*End of definition for* `\c__tag_struct_StructTreeRoot_entries_seq` *and* `\c__tag_struct_StructElem_-entries_seq`.)

3.1 Variables used by the keys

<code>\g__tag_struct_tag_tl</code>
<code>\g__tag_struct_tag_NS_tl</code>
<code>\l__tag_struct_roletag_tl</code>
<code>\g__tag_struct_roletag_NS_tl</code>

Use by the tag key to store the tag and the namespace. The role tag variables will hold locally rolemapping info needed for the parent-child checks

```
58 \tl_new:N \g__tag_struct_tag_tl
59 \tl_new:N \g__tag_struct_tag_NS_tl
60 \tl_new:N \l__tag_struct_roletag_tl
61 \tl_new:N \l__tag_struct_roletag_NS_tl
```

(*End of definition for* `\g__tag_struct_tag_tl` *and others.*)

`\l__tag_struct_key_label_tl`   This will hold the label value.

```
62 \tl_new:N \l__tag_struct_key_label_tl
```

(*End of definition for* `\l__tag_struct_key_label_tl`.)

`\l__tag_struct_elem_stash_bool`   This will keep track of the stash status

```
63 \bool_new:N \l__tag_struct_elem_stash_bool
```

(*End of definition for* `\l__tag_struct_elem_stash_bool`.)

3.2   Variables used by tagging code of basic elements

`\g__tag_struct_dest_num_prop`   This variable records for (some or all, not clear yet) destination names the related structure number to allow to reference them in a Ref. The key is the destination. It is currently used by the toc-tagging and sec-tagging code.

```
64 ⟨/package⟩
65 ⟨base⟩\prop_new_linked:N \g__tag_struct_dest_num_prop
66 ⟨*package⟩
```

(*End of definition for* `\g__tag_struct_dest_num_prop`.)

`\g__tag_struct_ref_by_dest_prop`   This variable contains structures whose Ref key should be updated at the end to point to structured related with this destination. As this is probably need in other places too, it is not only a toc-variable.

```
67 \prop_new_linked:N \g__tag_struct_ref_by_dest_prop
```

(*End of definition for* `\g__tag_struct_ref_by_dest_prop`.)

4   Commands

The properties must be in some places handled expandably. So I need an output handler for each prop, to get expandable output see https://tex.stackexchange.com/questions/424208. There is probably room here for a more efficient implementation. TODO check if this can now be implemented with the pdfdict commands. The property contains currently non pdf keys, but e.g. object numbers are perhaps no longer needed as we have named object anyway.

`\__tag_struct_output_prop_aux:nn`
`\__tag_new_output_prop_handler:n`

```
68 \cs_new:Npn \__tag_struct_output_prop_aux:nn #1 #2 %#1 num, #2 key
69   {
70     \prop_if_in:cnT
71       { g__tag_struct_#1_prop }
72       { #2 }
73       {
74         \c_space_tl/#2~ \prop_item:cn{ g__tag_struct_#1_prop } { #2 }
75       }
```

106

```
76     }
77
78  \cs_new_protected:Npn \__tag_new_output_prop_handler:n #1
79    {
80      \cs_new:cn { __tag_struct_output_prop_#1:n }
81        {
82          \__tag_struct_output_prop_aux:nn {#1}{##1}
83        }
84    }
85 ⟨/package⟩
```

(*End of definition for* __tag_struct_output_prop_aux:nn *and* __tag_new_output_prop_handler:n.)

__tag_struct_prop_gput:nnn   The structure props must be filled in various places. For this we use a common command
which also takes care of the debug package:

```
86  ⟨∗package | debug⟩
87  ⟨package⟩\cs_new_protected:Npn \__tag_struct_prop_gput:nnn #1 #2 #3
88  ⟨debug⟩\cs_set_protected:Npn \__tag_struct_prop_gput:nnn #1 #2 #3
89    {
90      \__tag_prop_gput:cnn
91        { g__tag_struct_#1_prop }{#2}{#3}
92  ⟨debug⟩\prop_gput:cnn { g__tag_struct_debug_#1_prop } {#2} {#3}
93    }
94  \cs_generate_variant:Nn \__tag_struct_prop_gput:nnn {nne,nee,nno}
95  ⟨/package | debug⟩
```

(*End of definition for* __tag_struct_prop_gput:nnn.)

4.1   Initialization of the StructTreeRoot

The first structure element, the StructTreeRoot is special, so created manually. The
underlying object is @@/struct/0 which is currently created in the tree code (TODO
move it here). The ParentTree and RoleMap entries are added at begin document in the
tree code as they refer to object which are setup in other parts of the code. This avoid
timing issues.

```
96  ⟨∗package⟩
97  \tl_gset:Nn \g__tag_struct_stack_current_tl {0}
```

__tag_pdf_name_e:n

```
98  \cs_new:Npn \__tag_pdf_name_e:n #1{\pdf_name_from_unicode_e:n{#1}}
99  ⟨/package⟩
```

(*End of definition for* __tag_pdf_name_e:n.)

g__tag_struct_0_prop
g__tag_struct_kids_0_seq
```
100 ⟨∗package⟩
101 \__tag_prop_new:c { g__tag_struct_0_prop }
102 \__tag_new_output_prop_handler:n {0}
103 \__tag_seq_new:c  { g__tag_struct_kids_0_seq }
104
105 \__tag_struct_prop_gput:nne
106   { 0 }
107   { Type }
108   { \pdf_name_from_unicode_e:n {StructTreeRoot} }
```

```
109
110 \__tag_struct_prop_gput:nne
111    { 0 }
112    { S }
113    { \pdf_name_from_unicode_e:n {StructTreeRoot} }

114
115 \__tag_struct_prop_gput:nne
116    { 0 }
117    { rolemap }
118    { {StructTreeRoot}{pdf} }

119
120 \__tag_struct_prop_gput:nne
121    { 0 }
122    { parentrole }
123    { {StructTreeRoot}{pdf} }

124
```

Namespaces are pdf 2.0. If the code moves into the kernel, the setting must be probably delayed.

```
125 \pdf_version_compare:NnF < {2.0}
126  {
127     \__tag_struct_prop_gput:nne
128     { 0 }
129     { Namespaces }
130     { \pdf_object_ref:n { __tag/tree/namespaces } }
131  }
132 ⟨/package⟩
```

In debug mode we have to copy the root manually as it is already setup:

```
133 ⟨debug⟩\prop_new:c { g__tag_struct_debug_0_prop }
134 ⟨debug⟩\seq_new:c  { g__tag_struct_debug_kids_0_seq }
135 ⟨debug⟩\prop_gset_eq:cc { g__tag_struct_debug_0_prop }{ g__tag_struct_0_prop }
136 ⟨debug⟩\prop_gremove:cn { g__tag_struct_debug_0_prop }{Namespaces}
```

(*End of definition for* g__tag_struct_0_prop *and* g__tag_struct_kids_0_seq.)

4.2   Adding the /ID key

Every structure gets automatically an ID which is currently simply calculated from the structure number.

__tag_struct_get_id:n

```
137 ⟨*package⟩
138 \cs_new:Npn \__tag_struct_get_id:n #1 %#1=struct num
139  {
140    (
141     ID.
142     \prg_replicate:nn
143     { \int_abs:n{\g__tag_tree_id_pad_int - \tl_count:e { \int_to_arabic:n { #1 } }} }
144     { 0 }
145     \int_to_arabic:n { #1 }
146    )
147  }
```

(*End of definition for* __tag_struct_get_id:n.)

4.3 Filling in the tag info

__tag_struct_set_tag_info:nnn
This adds or updates the tag info to a structure given by a number. We need also the original data, so we store both.

```
148 \pdf_version_compare:NnTF < {2.0}
149 {
150   \cs_new_protected:Npn \__tag_struct_set_tag_info:nnn #1 #2 #3
151     %#1 structure number, #2 tag, #3 NS
152     {
153        \__tag_struct_prop_gput:nne
154          { #1 }
155          { S }
156          { \pdf_name_from_unicode_e:n {#2}  } %
157     }
158 }
159 {
160   \cs_new_protected:Npn \__tag_struct_set_tag_info:nnn #1 #2 #3
161     {
162        \__tag_struct_prop_gput:nne
163          { #1 }
164          { S }
165          { \pdf_name_from_unicode_e:n {#2} } %
166        \prop_get:NnNT \g__tag_role_NS_prop {#3} \l__tag_get_tmpc_tl
167          {
168            \__tag_struct_prop_gput:nne
169              { #1 }
170              { NS }
171              { \l__tag_get_tmpc_tl } %
172          }
173     }
174 }
175 \cs_generate_variant:Nn \__tag_struct_set_tag_info:nnn {eVV}
```

(*End of definition for* __tag_struct_set_tag_info:nnn.)

__tag_struct_get_parentrole:nNN
We also need a way to get the tag info needed for parent child check from parent structures.

```
176 \cs_new_protected:Npn \__tag_struct_get_parentrole:nNN #1 #2 #3
177     %#1 struct num, #2 tlvar for tag , #3 tlvar for NS
178     {
179        \prop_get:cnNTF
180          { g__tag_struct_#1_prop }
181          { parentrole }
182          \l__tag_get_tmpc_tl
183          {
184            \tl_set:Ne #2{\exp_last_unbraced:NV\use_i:nn  \l__tag_get_tmpc_tl}
185            \tl_set:Ne #3{\exp_last_unbraced:NV\use_ii:nn \l__tag_get_tmpc_tl}
186          }
187          {
188            \tl_clear:N#2
189            \tl_clear:N#3
190          }
191     }
192 \cs_generate_variant:Nn\__tag_struct_get_parentrole:nNN {eNN}
```

(*End of definition for* `\__tag_struct_get_parentrole:nNN`.)

4.4 Handlings kids

Commands to store the kids. Kids in a structure can be a reference to a mc-chunk, an object reference to another structure element, or a object reference to an annotation (through an OBJR object).

`\__tag_struct_kid_mc_gput_right:nn`
`\__tag_struct_kid_mc_gput_right:ne`

The command to store an mc-chunk, this is a dictionary of type MCR. It would be possible to write out the content directly as unnamed object and to store only the object reference, but probably this would be slower, and the PDF is more readable like this. The code doesn't try to avoid the use of the /Pg key by checking page numbers. That imho only slows down without much gain. In generic mode the page break code will perhaps to have to insert an additional mcid after an existing one. For this we use a property list At first an auxiliary to write the MCID dict. This should normally be expanded!

```
193 \cs_new:Npn \__tag_struct_mcid_dict:n #1 %#1 MCID absnum
194   {
195     <<
196      /Type \c_space_tl /MCR \c_space_tl
197      /Pg
198        \c_space_tl
199      \pdf_pageobject_ref:n { \__tag_property_ref:enn{mcid-#1}{tagabspage}{1} }
200       /MCID \c_space_tl \__tag_property_ref:enn{mcid-#1}{tagmcid}{1}
201     >>
202   }
203 ⟨/package⟩
204 ⟨*package | debug⟩
205 ⟨package⟩\cs_new_protected:Npn \__tag_struct_kid_mc_gput_right:nn #1 #2 %#1 structure num, #2 [
206 ⟨debug⟩\cs_set_protected:Npn \__tag_struct_kid_mc_gput_right:nn #1 #2 %#1 structure num, #2 MC
207   {
208     \__tag_seq_gput_right:ce
209       { g__tag_struct_kids_#1_seq }
210       {
211         \__tag_struct_mcid_dict:n {#2}
212       }
213 ⟨debug⟩    \seq_gput_right:cn
214 ⟨debug⟩      { g__tag_struct_debug_kids_#1_seq }
215 ⟨debug⟩      {
216 ⟨debug⟩        MC~#2
217 ⟨debug⟩      }
218     \__tag_seq_gput_right:cn
219       { g__tag_struct_kids_#1_seq }
220       {
221         \prop_item:Nn \g__tag_struct_cont_mc_prop {#2}
222       }
223   }
224 ⟨package⟩\cs_generate_variant:Nn \__tag_struct_kid_mc_gput_right:nn {ne}
```

(*End of definition for* `\__tag_struct_kid_mc_gput_right:nn`.)

`\__tag_struct_kid_struct_gput_right:nn`
`\__tag_struct_kid_struct_gput_right:ee`

This commands adds a structure as kid. We only need to record the object reference in the sequence.

```
225 ⟨package⟩\cs_new_protected:Npn\__tag_struct_kid_struct_gput_right:nn #1 #2 %#1 num of parent st
```

```
226 ⟨debug⟩\cs_set_protected:Npn\__tag_struct_kid_struct_gput_right:nn #1 #2 %#1 num of parent str
227    {
228      \__tag_seq_gput_right:ce
229        { g__tag_struct_kids_#1_seq }
230        {
231          \pdf_object_ref:n { __tag/struct/#2 }
232        }
233 ⟨debug⟩      \seq_gput_right:cn
234 ⟨debug⟩        { g__tag_struct_debug_kids_#1_seq }
235 ⟨debug⟩        {
236 ⟨debug⟩          Struct~#2
237 ⟨debug⟩        }
238    }
239
240 ⟨package⟩\cs_generate_variant:Nn \__tag_struct_kid_struct_gput_right:nn {ee}
```

(*End of definition for* __tag_struct_kid_struct_gput_right:nn.)

__tag_struct_kid_OBJR_gput_right:nnn   At last the command to add an OBJR object. This has to write an object first. The
__tag_struct_kid_OBJR_gput_right:eee   first argument is the number of the parent structure, the second the (expanded) object
reference of the annotation. The last argument is the page object reference

```
241 ⟨package⟩\cs_new_protected:Npn\__tag_struct_kid_OBJR_gput_right:nnn #1 #2 #3 %#1 num of parent
242 ⟨package⟩                                                               %#2 obj reference
243 ⟨package⟩                                                               %#3 page object reference
244 ⟨debug⟩\cs_set_protected:Npn\__tag_struct_kid_OBJR_gput_right:nnn #1 #2 #3
245    {
246      \pdf_object_unnamed_write:nn
247        { dict }
248        {
249          /Type/OBJR/Obj~#2/Pg~#3
250        }
251      \__tag_seq_gput_right:ce
252        { g__tag_struct_kids_#1_seq }
253        {
254          \pdf_object_ref_last:
255        }
256 ⟨debug⟩      \seq_gput_right:ce
257 ⟨debug⟩        { g__tag_struct_debug_kids_#1_seq }
258 ⟨debug⟩        {
259 ⟨debug⟩          OBJR~reference
260 ⟨debug⟩        }
261    }
262 ⟨/package | debug⟩
263 ⟨*package⟩
264 \cs_generate_variant:Nn\__tag_struct_kid_OBJR_gput_right:nnn { eee }
```

(*End of definition for* __tag_struct_kid_OBJR_gput_right:nnn.)

__tag_struct_exchange_kid_command:N   In luamode it can happen that a single kid in a structure is split at a page break into
__tag_struct_exchange_kid_command:c   two or more mcid. In this case the lua code has to convert put the dictionary of the kid
into an array. See issue 13 at tagpdf repo. We exchange the dummy command for the
kids to mark this case. Change 2024-03-19: don't use a regex - that is slow.

```
265 \cs_new_protected:Npn\__tag_struct_exchange_kid_command:N #1 %#1 = seq var
266    {
```

111

```
267        \seq_gpop_left:NN #1 \l__tag_tmpa_tl
268        \tl_replace_once:Nnn \l__tag_tmpa_tl
269          {\__tag_mc_insert_mcid_kids:n}
270          {\__tag_mc_insert_mcid_single_kids:n}
271        \seq_gput_left:NV #1 \l__tag_tmpa_tl
272      }
273
274    \cs_generate_variant:Nn\__tag_struct_exchange_kid_command:N { c }
```

(*End of definition for* __tag_struct_exchange_kid_command:N.)

__tag_struct_fill_kid_key:n   This command adds the kid info to the K entry. In lua mode the content contains commands which are expanded later. The argument is the structure number.

```
275    \cs_new_protected:Npn \__tag_struct_fill_kid_key:n #1 %#1 is the struct num
276      {
277        \bool_if:NF\g__tag_mode_lua_bool
278          {
279            \seq_clear:N \l__tag_tmpa_seq
280            \seq_map_inline:cn { g__tag_struct_kids_#1_seq }
281             { \seq_put_right:Ne \l__tag_tmpa_seq { ##1 } }
282            %\seq_show:c { g__tag_struct_kids_#1_seq }
283            %\seq_show:N \l__tag_tmpa_seq
284            \seq_remove_all:Nn \l__tag_tmpa_seq {}
285            %\seq_show:N \l__tag_tmpa_seq
286            \seq_gset_eq:cN { g__tag_struct_kids_#1_seq } \l__tag_tmpa_seq
287          }
288
289        \int_case:nnF
290          {
291            \seq_count:c
292              {
293                g__tag_struct_kids_#1_seq
294              }
295          }
296          {
297            { 0 }
298            { } %no kids, do nothing
299            { 1 } % 1 kid, insert
300            {
301              % in this case we need a special command in
302              % luamode to get the array right. See issue #13
303              \bool_if:NTF\g__tag_mode_lua_bool
304                {
305                  \__tag_struct_exchange_kid_command:c
306                  {g__tag_struct_kids_#1_seq}
```
check if we get null
```

348                        \c_space_tl
349                      }
350                  ]
351                }
352            }
353      }
354
```

(*End of definition for* __tag_struct_fill_kid_key:n.)

4.5   Output of the object

__tag_struct_get_dict_content:nN This maps the dictionary content of a structure into a tl-var. Basically it does what
\pdfdict_use:n does. This is used a lot so should be rather fast.

```
355  \cs_new_protected:Npn \__tag_struct_get_dict_content:nN #1 #2 %#1: stucture num
356    {
357      \tl_clear:N #2
358      \prop_map_inline:cn { g__tag_struct_#1_prop }
359        {
360          \tl_put_right:Ne #2
```

```
361                 {
```

Some keys needs the option to format the value, e.g. add brackets for an array, we also
need the option to ignore some entries in the properties.

```
362                 \cs_if_exist_use:cTF {__tag_struct_format_##1:nn}
363                 {{##1}{##2}}
364                 {\c_space_tl/##1~##2}
365             }
366         }
367     }
```

(*End of definition for* __tag_struct_get_dict_content:nN.)

__tag_struct_format_rolemap:nn   This two entries should not end in the PDF.
__tag_struct_format_parentrole:nn

```
368 \cs_new:Nn\__tag_struct_format_rolemap:nn{}
369 \cs_new:Nn\__tag_struct_format_parentrole:nn{}
```

(*End of definition for* __tag_struct_format_rolemap:nn *and* __tag_struct_format_parentrole:nn.)

__tag_struct_format_Ref:nn   Ref is an array, we store only the content to be able to extend it so the formatting
command adds the brackets:

```
370 \cs_new:Nn\__tag_struct_format_Ref:nn{\c_space_tl/#1~[#2]}
```

(*End of definition for* __tag_struct_format_Ref:nn.)

__tag_struct_write_obj:n   This writes out the structure object. This is done in the finish code, in the tree module
and guarded by the tree boolean.

```
371 \cs_new_protected:Npn \__tag_struct_write_obj:n #1 % #1 is the struct num
372     {
373         \pdf_object_if_exist:nTF { __tag/struct/#1 }
374             {
```

It can happen that a structure is not used and so has not parent. Simply ignoring it is
problematic as it is also recorded in the IDTree, so we make an artifact out of it.

```
375             \prop_get:cnNF { g__tag_struct_#1_prop } {P}\l__tag_tmpb_tl
376                 {
377                     \prop_gput:cne { g__tag_struct_#1_prop } {P}{\pdf_object_ref:n { __tag/struct/0 }}
378                     \prop_gput:cne { g__tag_struct_#1_prop } {S}{/Artifact}
379                     \seq_if_empty:cF {g__tag_struct_kids_#1_seq}
380                         {
381                             \msg_warning:nnee
382                                 {tag}
383                                 {struct-orphan}
384                                 { #1 }
385                                 {\seq_count:c{g__tag_struct_kids_#1_seq}}
386                         }
387                 }
388             \__tag_struct_fill_kid_key:n { #1 }
389             \__tag_struct_get_dict_content:nN { #1 } \l__tag_tmpa_tl
390             \exp_args:Ne
391                 \pdf_object_write:nne
392                     { __tag/struct/#1 }
393                     {dict}
394                     {
395                         \l__tag_tmpa_tl\c_space_tl
```

114

```
396                         /ID~\__tag_struct_get_id:n{#1}
397                       }
398
399           }
400           {
401             \msg_error:nnn { tag } { struct-no-objnum } { #1}
402           }
403      }
```

(*End of definition for* __tag_struct_write_obj:n.)

__tag_struct_insert_annot:nn This is the command to insert an annotation into the structure. It can probably be used
for xform too.

Annotations used as structure content must

1. add a StructParent integer to their dictionary

2. push the object reference as OBJR object in the structure

3. Add a Structparent/obj-nr reference to the parent tree.

For a link this looks like this

```
       \tag_struct_begin:n { tag=Link }
       \tag_mc_begin:n { tag=Link }
(1)    \pdfannot_dict_put:nne
         { link/URI }
         { StructParent }
         { \int_use:N\c@g_@@_parenttree_obj_int }
   <start link> link text <stop link>
(2+3)  \@@_struct_insert_annot:nn {obj ref}{parent num}
       \tag_mc_end:
       \tag_struct_end:
```

```
404 \cs_new_protected:Npn \__tag_struct_insert_annot:nn #1 #2 %#1 object reference to the annotat:
405                                                          %#2 structparent number
406   {
407     \bool_if:NT \g__tag_active_struct_bool
408       {
409         %get the number of the parent structure:
410         \seq_get:NNF
411           \g__tag_struct_stack_seq
412           \l__tag_struct_stack_parent_tmpa_tl
413           {
414             \msg_error:nn { tag } { struct-faulty-nesting }
415           }
416         %put the obj number of the annot in the kid entry, this also creates
417         %the OBJR object
418         \__tag_property_record:nn {@tag@objr@page@#2 }{ tagabspage }
419         \__tag_struct_kid_OBJR_gput_right:eee
420           {
421             \l__tag_struct_stack_parent_tmpa_tl
422           }
423           {
424             #1 %
```

```
425                 }
426                 {
427                   \pdf_pageobject_ref:n { \__tag_property_ref:nnn {@tag@objr@page@#2 }{ tagabspage }
428                 }
429           % add the parent obj number to the parent tree:
430           \exp_args:Nne
431           \__tag_parenttree_add_objr:nn
432             {
433               #2
434             }
435             {
436               \pdf_object_ref:e { __tag/struct/\l__tag_struct_stack_parent_tmpa_tl }
437             }
438           % increase the int:
439           \int_gincr:N \c@g__tag_parenttree_obj_int
440         }
441     }
```

(*End of definition for* `\__tag_struct_insert_annot:nn`.)

`\__tag_get_data_struct_tag:`   this command allows `\tag_get:n` to get the current structure tag with the keyword `struct_tag`.

```
442 \cs_new:Npn \__tag_get_data_struct_tag:
443   {
444     \exp_args:Ne
445     \tl_tail:n
446       {
447         \prop_item:cn {g__tag_struct_\g__tag_struct_stack_current_tl _prop}{S}
448       }
449   }
```

(*End of definition for* `\__tag_get_data_struct_tag:`.)

`\__tag_get_data_struct_id:`   this command allows `\tag_get:n` to get the current structure id with the keyword `struct_id`.

```
450 \cs_new:Npn \__tag_get_data_struct_id:
451   {
452     \__tag_struct_get_id:n {\g__tag_struct_stack_current_tl}
453   }
454 ⟨/package⟩
```

(*End of definition for* `\__tag_get_data_struct_id:`.)

`\__tag_get_data_struct_num:`   this command allows `\tag_get:n` to get the current structure number with the keyword `struct_num`. We will need to handle nesting

```
455 ⟨*base⟩
456 \cs_new:Npn \__tag_get_data_struct_num:
457   {
458     \g__tag_struct_stack_current_tl
459   }
460 ⟨/base⟩
```

(*End of definition for* `\__tag_get_data_struct_num:`.)

this command allows `\tag_get:n` to get the current state of the structure counter with the keyword `struct_counter`. By comparing the numbers it can be used to check the number of structure commands in a piece of code.

```
461 ⟨*base⟩
462 \cs_new:Npn \__tag_get_data_struct_counter:
463   {
464     \int_use:N \c@g__tag_struct_abs_int
465   }
466 ⟨/base⟩
```

(*End of definition for* `\__tag_get_data_struct_counter:`.)

5   Keys

This are the keys for the user commands. we store the tag in a variable. But we should be careful, it is only reliable at the begin.

This socket is used by the tag key. It allows to switch between the latex-tabs and the standard tags.

```
467 ⟨*package⟩
468 \socket_new:nn { tag/struct/tag }{1}
469 \socket_new_plug:nnn { tag/struct/tag }{ latex-tags }
470   {

AF␣(struct-key)
AFref␣(struct-key)
AFinline␣(struct-key)
AFinline-o␣(struct-key)

keys for the AF keys (associated files). They use commands from l3pdffile! The stream variants use txt as extension to get the mimetype. TODO: check if this should be configurable. For math we will perhaps need another extension. AF/AFref is an array and can be used more than once, so we store it in a tl. which is expanded. AFinline

currently uses the fix extention txt. texsource is a special variant which creates a tex-file, it expects a tl-var as value (e.g. from math grabbing)

This variable is used to number the AF-object names

```

(*End of definition for* \tag_struct_object_ref:n. *This function is documented on page 100.*)

\tag_struct_gput:nnn   This is a command that allows to update the data of a structure. This often can't done simply by replacing the value, as we have to preserve and extend existing content. We use therefore dedicated functions adjusted to the key in question. The first argument is the number of the structure, the second a keyword referring to a function, the third the value. Currently the only keyword is ref which updates the Ref key (an array)

```
1084 \cs_new_protected:Npn \tag_struct_gput:nnn #1 #2 #3
1085  {
1086    \cs_if_exist_use:cF {__tag_struct_gput_data_#2:nn}
1087    { %warning??
1088      \use_none:nn
1089    }
1090    {#1}{#3}
1091  }
1092 \cs_generate_variant:Nn \tag_struct_gput:nnn {ene,nne}
1093 ⟨/package⟩
```

(*End of definition for* \tag_struct_gput:nnn. *This function is documented on page 101.*)

__tag_struct_gput_data_ref:nn

```
1094 ⟨*package⟩

7 Attributes and attribute classes

7.1 Variables

\g__tag_attr_entries_prop
\g__tag_attr_class_used_prop
\g__tag_attr_objref_prop
\l__tag_attr_value_tl

\g_@@_attr_entries_prop will store attribute names and their dictionary content. \g_@@_attr_class_used_prop will hold the attributes which have been used as class name. \l_@@_attr_value_tl is used to build the attribute array or key. Every time an attribute is used for the first time, and object is created with its content, the name-object reference relation is stored in \g_@@_attr_objref_prop

```
1126  ⟨*package⟩
1127  \prop_new:N \g__tag_attr_entries_prop
1128  \prop_new_linked:N \g__tag_attr_class_used_prop
1129  \tl_new:N    \l__tag_attr_value_tl
1130  \prop_new:N \g__tag_attr_objref_prop %will contain obj num of used attributes
```

This seq is currently kept for compability with the table code.

```
1131  \seq_new:N\g__tag_attr_class_used_seq
```

(*End of definition for* \g__tag_attr_entries_prop *and others.*)

7.2 Commands and keys

__tag_attr_new_entry:nn
role/new-attribute␣(setup-key)
newattribute␣(deprecated)

This allows to define attributes. Defined attributes are stored in a global property. role/new-attribute expects two brace group, the name and the content. The content typically needs an /O key for the owner. An example look like this.

    TODO: consider to put them directly in the ClassMap, that is perhaps more effective.

```
\tagpdfsetup
 {
  role/new-attribute =
   {TH-col}{/O /Table /Scope /Column},
  role/new-attribute =
```

```
                    {TH-row}{/O /Table /Scope /Row},
                  }

1132 \cs_new_protected:Npn \__tag_attr_new_entry:nn #1 #2 %#1:name, #2: content
1133   {
1134     \prop_gput:Nen \g__tag_attr_entries_prop
1135       {\pdf_name_from_unicode_e:n{#1}}{#2}
1136   }

The **tagpdf-luatex.def** Driver for luatex Part of the tagpdf package

```
1 ⟨@@=tag⟩
2 ⟨*luatex⟩
3 \ProvidesExplFile {tagpdf-luatex.def} {2024-03-27} {0.99a}
4   {tagpdf~driver~for~luatex}
```

1   Loading the lua

The space code requires that the fall back font has been loaded and initialized, so we force that first. But perhaps this could be done in the kernel.

```
5 {
6   \fontencoding{TU}\fontfamily{lmr}\fontseries{m}\fontshape{n}\fontsize{10pt}{10pt}\selectfont
7 }
8 \lua_now:e { tagpdf=require('tagpdf.lua') }
```

The following defines wrappers around prop and seq commands to store the data also in lua tables. I probably want also lua tables I put them in the ltx.@@.tables namespaces The tables will be named like the variables but without backslash To access such a table with a dynamical name create a string and then use ltx.@@.tables[string] Old code, I'm not quite sure if this was a good idea. Now I have mix of table in ltx.@@.tables and ltx.@@.mc/struct. And a lot is probably not needed. TODO: this should be cleaned up, but at least roles are currently using the table!

```lua
80
81 if luatexbase and luatexbase.provides_module then
82   luatexbase.provides_module (ProvidesLuaModule)
83 end
84
85 --[[
86 The code has quite probably a number of problems
87  - more variables should be local instead of global
88  - the naming is not always consistent due to the development of the code
89  - the traversing of the shipout box must be tested with more complicated setups
90  - it should probably handle more node types
91  -
92 --]]
93
```

Some comments about the lua structure.

```lua
94 --[[
95 the main table is named ltx.__tag. It contains the functions and also the data
96 collected during the compilation.
97
98 ltx.__tag.mc      will contain mc connected data.
99 ltx.__tag.struct will contain structure related data.
100 ltx.__tag.page   will contain page data
101 ltx.__tag.tables contains also data from mc and struct (from older code). This needs cleaning
102            There are certainly dublettes, but I don't dare yet ...
103 ltx.__tag.func   will contain (public) functions.
104 ltx.__tag.trace  will contain tracing/loging functions.
105 local funktions starts with __
106 functions meant for users will be in ltx.tag
107
108 functions
109  ltx.__tag.func.get_num_from (tag):    takes a tag (string) and returns the id number
110  ltx.__tag.func.output_num_from (tag): takes a tag (string) and prints (to tex) the id number
111  ltx.__tag.func.get_tag_from (num):    takes a num and returns the tag
112  ltx.__tag.func.output_tag_from (num): takes a num and prints (to tex) the tag
113  ltx.__tag.func.store_mc_data (num,key,data): stores key=data in ltx.__tag.mc[num]
114  ltx.__tag.func.store_mc_label (label,num): stores label=num in ltx.__tag.mc.labels
115  ltx.__tag.func.store_mc_kid (mcnum,kid,page): stores the mc-kids of mcnum on page page
116  ltx.__tag.func.store_mc_in_page(mcnum,mcpagecnt,page): stores in the page table the number o
117  ltx.__tag.func.store_struct_mcabs (structnum,mcnum): stores relations structnum<->mcnum (abs)
118  ltx.__tag.func.mc_insert_kids (mcnum): inserts the /K entries for mcnum by wandering throught
119  ltx.__tag.func.mark_page_elements(box,mcpagecnt,mccntprev,mcopen,name,mctypeprev) : the main
120  ltx.__tag.func.mark_shipout (): a wrapper around the core function which inserts the last EMC
121  ltx.__tag.func.fill_parent_tree_line (page): outputs the entries of the parenttree for this p
122  ltx.__tag.func.output_parenttree(): outputs the content of the parenttree
123  ltx.__tag.func.pdf_object_ref(name): outputs the object reference for the object name

129  ltx.__tag.trace.show_prop: shows a prop
130  ltx.__tag.trace.log
131  ltx.__tag.trace.showspaces : boolean
132 --]]
```

This set-ups the main attribute registers. The mc_type attribute stores the type (P, Span etc) encoded as a num, The mc_cnt attribute stores the absolute number and allows so to see if a node belongs to the same mc-chunk.

The interwordspace attr is set by the function `@@_mark_spaces`, and marks the place where spaces should be inserted. The interwordfont attr is set by the function `@@_mark_spaces` too and stores the font, so that we can decide which font to use for the real space char.

```
134 local mctypeattributeid  = luatexbase.new_attribute ("g__tag_mc_type_attr")
135 local mccntattributeid   = luatexbase.new_attribute ("g__tag_mc_cnt_attr")
136 local iwspaceattributeid = luatexbase.new_attribute ("g__tag_interwordspace_attr")
137 local iwfontattributeid  = luatexbase.new_attribute ("g__tag_interwordfont_attr")
```

with this token we can query the state of the boolean and so detect if unmarked nodes should be marked as attributes

```
138 local tagunmarkedbool= token.create("g__tag_tagunmarked_bool")
139 local truebool       = token.create("c_true_bool")
```

Now a number of local versions from global tables. Not all is perhaps needed, most node variants were copied from lua-debug.

```
140 local catlatex       = luatexbase.registernumber("catcodetable@latex")
141 local tableinsert    = table.insert
142 local nodeid         = node.id
143 local nodecopy       = node.copy
144 local nodegetattribute = node.get_attribute
145 local nodesetattribute = node.set_attribute
146 local nodehasattribute = node.has_attribute
147 local nodenew        = node.new
148 local nodetail       = node.tail
149 local nodeslide      = node.slide
150 local noderemove     = node.remove
151 local nodetraverseid   = node.traverse_id
152 local nodetraverse    = node.traverse
153 local nodeinsertafter  = node.insert_after
154 local nodeinsertbefore = node.insert_before
155 local pdfpageref     = pdf.pageref
156
157 local fonthashes      = fonts.hashes
158 local identifiers     = fonthashes.identifiers
159 local fontid         = font.id
160
161 local HLIST          = node.id("hlist")
162 local VLIST          = node.id("vlist")
163 local RULE           = node.id("rule")
164 local DISC           = node.id("disc")
165 local GLUE           = node.id("glue")
166 local GLYPH          = node.id("glyph")
167 local KERN           = node.id("kern")
168 local PENALTY        = node.id("penalty")
169 local LOCAL_PAR      = node.id("local_par")
170 local MATH           = node.id("math")
```

Now we setup the main table structure. ltx is used by other latex code too!

```
171 ltx             = ltx       or { }
```

```
172  ltx.__tag          = ltx.__tag         or { }
173  ltx.__tag.mc       = ltx.__tag.mc      or  { } -- mc data
174  ltx.__tag.struct   = ltx.__tag.struct  or  { } -- struct data
175  ltx.__tag.tables   = ltx.__tag.tables  or  { } -- tables created with new prop and new seq.
176                                          -- wasn't a so great idea ...
177                                          -- g__tag_role_tags_seq used by tag<-> is in this tabl
178                                          -- used for pure lua tables too now!
179  ltx.__tag.page     = ltx.__tag.page   or  { } -- page data, currently only i->{0->mcnum,1->mcn
180  ltx.__tag.trace    = ltx.__tag.trace  or  { } -- show commands
181  ltx.__tag.func     = ltx.__tag.func   or  { } -- functions
182  ltx.__tag.conf     = ltx.__tag.conf   or  { } -- configuration variables
```

2 Logging functions

__tag_log
ltx.__tag.trace.log

This rather simple log function takes as argument a message (string) and a number and will output the message to the log/terminal if the current loglevel is greater or equal than num.

```
183  local __tag_log =
184    function (message,loglevel)
185     if (loglevel or 3) <= tex.count["l__tag_loglevel_int"] then
186      texio.write_nl("tagpdf: ".. message)
187     end
188    end
189
190  ltx.__tag.trace.log = __tag_log
```

(*End of definition for* __tag_log *and* ltx.__tag.trace.log.)

ltx.__tag.trace.show_seq

This shows the content of a seq as stored in the tables table. It is used by the \@@_seq_show:N function. It is not used in user commands, only for debugging, and so requires log level >0.

```
191  function ltx.__tag.trace.show_seq (seq)
192   if (type(seq) == "table") then
193    for i,v in ipairs(seq) do
194     __tag_log ("[" .. i .. "] => " .. tostring(v),1)
195    end
196   else
197    __tag_log ("sequence " .. tostring(seq) .. " not found",1)
198   end
199  end
```

(*End of definition for* ltx.__tag.trace.show_seq.)

__tag_pairs_prop
ltx.__tag.trace.show_prop

This shows the content of a prop as stored in the tables table. It is used by the \@@_prop_show:N function.

```
200  local __tag_pairs_prop =
201    function  (prop)
202        local a = {}
203        for n in pairs(prop) do tableinsert(a, n) end
204        table.sort(a)
205        local i = 0                 -- iterator variable
206        local iter = function ()    -- iterator function
207          i = i + 1
```

139

```
208        if a[i] == nil then return nil
209        else return a[i], prop[a[i]]
210        end
211      end
212      return iter
213   end
214

215
216 function ltx.__tag.trace.show_prop (prop)
217  if (type(prop) == "table") then
218    for i,v in __tag_pairs_prop (prop) do
219      __tag_log ("[" .. i .. "] => " .. tostring(v),1)
220    end
221  else
222    __tag_log ("prop " .. tostring(prop) .. " not found or not a table",1)
223  end
224  end
```

(*End of definition for* `__tag_pairs_prop` *and* `ltx.__tag.trace.show_prop`.)

`ltx.__tag.trace.show_mc_data` This shows some data for a mc given by `num`. If something is shown depends on the log level. The function is used by the following function and then in `\ShowTagging`

```
225 function ltx.__tag.trace.show_mc_data (num,loglevel)
226  if ltx.__tag and ltx.__tag.mc and ltx.__tag.mc[num] then
227    for k,v in pairs(ltx.__tag.mc[num]) do
228      __tag_log  ("mc"..num..": "..tostring(k).."=>"..tostring(v),loglevel)
229    end
230    if ltx.__tag.mc[num]["kids"] then
231    __tag_log ("mc" .. num .. " has " .. #ltx.__tag.mc[num]["kids"] .. " kids",loglevel)
232     for k,v in ipairs(ltx.__tag.mc[num]["kids"]) do
233      __tag_log ("mc ".. num .. " kid "..k.." =>" .. v.kid.." on page " ..v.page,loglevel)
234     end
235    end
236  else
237    __tag_log  ("mc"..num.." not found",loglevel)
238  end
239 end
```

(*End of definition for* `ltx.__tag.trace.show_mc_data`.)

`ltx.__tag.trace.show_all_mc_data` This shows data for the mc's between `min` and `max` (numbers). It is used by the `\ShowTagging` function.

```
240 function ltx.__tag.trace.show_all_mc_data (min,max,loglevel)
241  for i = min, max do
242    ltx.__tag.trace.show_mc_data (i,loglevel)
243  end
244  texio.write_nl("")
245 end
```

(*End of definition for* `ltx.__tag.trace.show_all_mc_data`.)

`ltx.__tag.trace.show_struct_data` This function shows some struct data. Unused but kept for debugging.

```
246 function ltx.__tag.trace.show_struct_data (num)
247  if ltx.__tag and ltx.__tag.struct and ltx.__tag.struct[num] then
248    for k,v in ipairs(ltx.__tag.struct[num]) do
```

```
249    __tag_log  ("struct "..num..": "..tostring(k).."=>"..tostring(v),1)
250   end
251  else
252    __tag_log   ("struct "..num.." not found ",1)
253  end
254 end
```

(*End of definition for* `ltx.__tag.trace.show_struct_data`.)

3   Helper functions

3.1   Retrieve data functions

`__tag_get_mc_cnt_type_tag` This takes a node as argument and returns the mc-cnt, the mc-type and and the tag (calculated from the mc-cnt.

```
255 local __tag_get_mc_cnt_type_tag = function (n)
256   local mccnt      = nodegetattribute(n,mccntattributeid)  or -1
257   local mctype     = nodegetattribute(n,mctypeattributeid)  or -1
258   local tag        = ltx.__tag.func.get_tag_from(mctype)
259   return mccnt,mctype,tag
260 end
```

(*End of definition for* `__tag_get_mc_cnt_type_tag`.)

`__tag_get_mathsubtype` This function allows to detect if we are at the begin or the end of math. It takes as argument a mathnode.

```
261 local function __tag_get_mathsubtype  (mathnode)
262  if mathnode.subtype == 0 then
263   subtype = "beginmath"
264  else
265   subtype = "endmath"
266  end
267  return subtype
268 end
```

(*End of definition for* `__tag_get_mathsubtype`.)

`ltx.__tag.tables.role_tag_attribute` The first is a table with key a tag and value a number (the attribute) The second is an array with the attribute value as key.

```
269 ltx.__tag.tables.role_tag_attribute = {}
270 ltx.__tag.tables.role_attribute_tag = {}
```

(*End of definition for* `ltx.__tag.tables.role_tag_attribute`.)

`ltx.__tag.func.alloctag`

```
271 local __tag_alloctag =
272  function (tag)
273    if not ltx.__tag.tables.role_tag_attribute[tag] then
274     table.insert(ltx.__tag.tables.role_attribute_tag,tag)
275     ltx.__tag.tables.role_tag_attribute[tag]=#ltx.__tag.tables.role_attribute_tag
276     __tag_log  ("Add "..tag.." "..ltx.__tag.tables.role_tag_attribute[tag],3)
277    end
278  end
279 ltx.__tag.func.alloctag = __tag_alloctag
```

(*End of definition for* `ltx.__tag.func.alloctag`.)

These functions take as argument a string `tag`, and return the number under which is it recorded (and so the attribute value). The first function outputs the number for lua, while the `output` function outputs to tex.

```
280 local __tag_get_num_from =
281  function (tag)
282   if ltx.__tag.tables.role_tag_attribute[tag] then
283     a= ltx.__tag.tables.role_tag_attribute[tag]
284   else
285     a= -1
286   end
287   return a
288  end
289
290 ltx.__tag.func.get_num_from = __tag_get_num_from
291
292 function ltx.__tag.func.output_num_from (tag)
293   local num = __tag_get_num_from (tag)
294   tex.sprint(catlatex,num)
295   if num == -1 then
296     __tag_log ("Unknown tag "..tag.." used")
297   end
298 end
```

(*End of definition for* `__tag_get_num_from`, `ltx.__tag.func.get_num_from`, *and* `ltx.__tag.func.output_-num_from`.)

These functions are the opposites to the previous function: they take as argument a number (the attribute value) and return the string `tag`. The first function outputs the string for lua, while the `output` function outputs to tex.

```
299 local __tag_get_tag_from =
300  function  (num)
301   if ltx.__tag.tables.role_attribute_tag[num] then
302    a = ltx.__tag.tables.role_attribute_tag[num]
303   else
304     a= "UNKNOWN"
305   end
306  return a
307 end
308
309 ltx.__tag.func.get_tag_from = __tag_get_tag_from
310
311 function ltx.__tag.func.output_tag_from (num)
312   tex.sprint(catlatex,__tag_get_tag_from (num))
313 end
```

(*End of definition for* `__tag_get_tag_from`, `ltx.__tag.func.get_tag_from`, *and* `ltx.__tag.func.output_-tag_from`.)

This function stores for `key=data` for mc-chunk `num`. It is used in the tagpdf-mc code, to store for example the tag string, and the raw options.

```
314 function ltx.__tag.func.store_mc_data (num,key,data)
315  ltx.__tag.mc[num] = ltx.__tag.mc[num] or { }
```

142

```
316   ltx.__tag.mc[num][key] = data
317   __tag_log  ("INFO TEX-STORE-MC-DATA: "..num.." => "..tostring(key).." => "..tostring(data),3)
318 end
```

(*End of definition for* `ltx.__tag.func.store_mc_data`.)

`ltx.__tag.func.store_mc_label` This function stores the **label**=num relationship in the **labels** subtable. TODO: this is probably unused and can go.

```
319 function ltx.__tag.func.store_mc_label (label,num)
320   ltx.__tag.mc["labels"] = ltx.__tag.mc["labels"] or { }
321   ltx.__tag.mc.labels[label] = num
322 end
```

(*End of definition for* `ltx.__tag.func.store_mc_label`.)

`ltx.__tag.func.store_mc_kid` This function is used in the traversing code. It stores a sub-chunk of a mc **mcnum** into the **kids** table.

```
323 function ltx.__tag.func.store_mc_kid (mcnum,kid,page)
324   ltx.__tag.trace.log("INFO TAG-STORE-MC-KID: "..mcnum.." => " .. kid.." on page " .. page,3)
325   ltx.__tag.mc[mcnum]["kids"] = ltx.__tag.mc[mcnum]["kids"] or { }
326   local kidtable = {kid=kid,page=page}
327   tableinsert(ltx.__tag.mc[mcnum]["kids"], kidtable )
328 end
```

(*End of definition for* `ltx.__tag.func.store_mc_kid`.)

`ltx.__tag.func.mc_num_of_kids` This function returns the number of kids a mc **mcnum** has. We need to account for the case that a mc can have no kids.

```
329 function ltx.__tag.func.mc_num_of_kids (mcnum)
330   local num = 0
331   if ltx.__tag.mc[mcnum] and ltx.__tag.mc[mcnum]["kids"] then
332     num = #ltx.__tag.mc[mcnum]["kids"]
333   end
334   ltx.__tag.trace.log ("INFO MC-KID-NUMBERS: " .. mcnum .. "has " .. num .. "KIDS",4)
335   return num
336 end
```

(*End of definition for* `ltx.__tag.func.mc_num_of_kids`.)

3.2   Functions to insert the pdf literals

`__tag_backend_create_emc_node` This insert the emc node. We support also dvips and dvipdfmx backend
`__tag_insert_emc_node`
```
337 local __tag_backend_create_emc_node
338 if tex.outputmode == 0 then
339   if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
340     function __tag_backend_create_emc_node ()
341       local emcnode = nodenew("whatsit","special")
342         emcnode.data = "pdf:code EMC"
343       return emcnode
344     end
345   else -- assume a dvips variant
346     function __tag_backend_create_emc_node ()
347       local emcnode = nodenew("whatsit","special")
348         emcnode.data = "ps:SDict begin mark /EMC pdfmark end"
```

```
349     return emcnode
350   end
351  end
352 else -- pdf mode
353  function __tag_backend_create_emc_node ()
354    local emcnode = nodenew("whatsit","pdf_literal")
355      emcnode.data = "EMC"
356      emcnode.mode=1
357    return emcnode
358  end
359 end
360
361 local function __tag_insert_emc_node (head,current)
362   local emcnode= __tag_backend_create_emc_node()
363   head = node.insert_before(head,current,emcnode)
364   return head
365 end
```

(*End of definition for* __tag_backend_create_emc_node *and* __tag_insert_emc_node.)

__tag_backend_create_bmc_node
__tag_insert_bmc_node

This inserts a simple bmc node

```
366 local __tag_backend_create_bmc_node
367 if tex.outputmode == 0 then
368  if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
369   function __tag_backend_create_bmc_node (tag)
370     local bmcnode = nodenew("whatsit","special")
371     bmcnode.data = "pdf:code /"..tag.." BMC"
372     return bmcnode
373   end
374  else -- assume a dvips variant
375   function __tag_backend_create_bmc_node (tag)
376     local bmcnode = nodenew("whatsit","special")
377     bmcnode.data = "ps:SDict begin mark/"..tag.." /BMC pdfmark end"
378     return bmcnode
379   end
380  end
381 else -- pdf mode
382   function __tag_backend_create_bmc_node (tag)
383     local bmcnode = nodenew("whatsit","pdf_literal")
384     bmcnode.data = "/"..tag.." BMC"
385     bmcnode.mode=1
386     return bmcnode
387   end
388 end
389
390 local function __tag_insert_bmc_node (head,current,tag)
391   local bmcnode = __tag_backend_create_bmc_node (tag)
392   head = node.insert_before(head,current,bmcnode)
393   return head
394 end
```

(*End of definition for* __tag_backend_create_bmc_node *and* __tag_insert_bmc_node.)

__tag_backend_create_bdc_node
__tag_insert_bdc_node

This inserts a bcd node with a fix dict. TODO: check if this is still used, now that we create properties.

144

```
395  local __tag_backend_create_bdc_node
396
397  if tex.outputmode == 0 then
398   if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
399    function __tag_backend_create_bdc_node (tag,dict)
400      local bdcnode = nodenew("whatsit","special")
401      bdcnode.data = "pdf:code /"..tag.."<<"..dict..">> BDC"
402      return bdcnode
403    end
404   else -- assume a dvips variant
405    function __tag_backend_create_bdc_node (tag,dict)
406      local bdcnode = nodenew("whatsit","special")
407      bdcnode.data = "ps:SDict begin mark/"..tag.."<<"..dict..">> /BDC pdfmark end"
408      return bdcnode
409    end
410   end
411  else -- pdf mode
412    function __tag_backend_create_bdc_node (tag,dict)
413      local bdcnode = nodenew("whatsit","pdf_literal")
414      bdcnode.data = "/"..tag.."<<"..dict..">> BDC"
415      bdcnode.mode=1
416      return bdcnode
417    end
418  end
419
420  local function __tag_insert_bdc_node (head,current,tag,dict)
421   bdcnode= __tag_backend_create_bdc_node (tag,dict)
422   head = node.insert_before(head,current,bdcnode)
423   return head
424  end
```

(*End of definition for* __tag_backend_create_bdc_node *and* __tag_insert_bdc_node.)

__tag_pdf_object_ref
ltx.__tag.func.pdf_object_ref

This allows to reference a pdf object reserved with the l3pdf command by name. The return value is n 0 R, if the object doesn't exist, n is 0. TODO: is uses internal l3pdf commands, this should be properly supported by l3pdf

```
425  local function __tag_pdf_object_ref (name)
426    local tokenname = 'c__pdf_object_'..name..'_int'
427    local object = token.create(tokenname).mode ..' 0 R'
428    return object
429  end
430  ltx.__tag.func.pdf_object_ref=__tag_pdf_object_ref
```

(*End of definition for* __tag_pdf_object_ref *and* ltx.__tag.func.pdf_object_ref.)

4 Function for the real space chars

__tag_show_spacemark

A debugging function, it is used to inserts red color markers in the places where space chars can go, it can have side effects so not always reliable, but ok.

```
431  local function __tag_show_spacemark (head,current,color,height)
432   local markcolor = color or "1 0 0"
433   local markheight = height or 10
434   local pdfstring
```

```
435   if tex.outputmode == 0 then
436     -- ignore dvi mode for now
437   else
438     pdfstring = node.new("whatsit","pdf_literal")
439         pdfstring.data =
440         string.format("q "..markcolor.." RG "..markcolor.." rg 0.4 w 0 %g m 0 %g l S Q",-
    3,markheight)
441         head = node.insert_after(head,current,pdfstring)
442     return head
443   end
444 end
```

(*End of definition for* __tag_show_spacemark.)

__tag_fakespace   This is used to define a lua version of \pdffakespace
ltx.__tag.func.fakespace
```
445 local function __tag_fakespace()
446     tex.setattribute(iwspaceattributeid,1)
447     tex.setattribute(iwfontattributeid,font.current())
448 end
449 ltx.__tag.func.fakespace = __tag_fakespace
```

(*End of definition for* __tag_fakespace *and* ltx.__tag.func.fakespace.)

__tag_mark_spaces   a function to mark up places where real space chars should be inserted. It only sets attributes, these are then be used in a later traversing which inserts the actual spaces. When space handling is activated this function is inserted in some callbacks.

```
450 --[[ a function to mark up places where real space chars should be inserted
451     it only sets an attribute.
452 --]]
453
454 local function __tag_mark_spaces (head)

510 end
```

(*End of definition for* `__tag_mark_spaces`.)

Theses functions add/remove the function which marks the spaces to the callbacks `pre_linebreak_filter` and `hpack_filter`

```
511 local function __tag_activate_mark_space ()
512  if not luatexbase.in_callback ("pre_linebreak_filter","markspaces") then
513   luatexbase.add_to_callback("pre_linebreak_filter",__tag_mark_spaces,"markspaces")
514   luatexbase.add_to_callback("hpack_filter",__tag_mark_spaces,"markspaces")
515  end
516 end
517
518 ltx.__tag.func.markspaceon=__tag_activate_mark_space
519
520 local function __tag_deactivate_mark_space ()
521  if luatexbase.in_callback ("pre_linebreak_filter","markspaces") then
522   luatexbase.remove_from_callback("pre_linebreak_filter","markspaces")
523   luatexbase.remove_from_callback("hpack_filter","markspaces")
524  end
525 end
526
527 ltx.__tag.func.markspaceoff=__tag_deactivate_mark_space
```

(End of definition for __tag_activate_mark_space , ltx.__tag.func.markspaceon , and ltx.__tag.func.markspaceoff.)

We need two local variable to setup a default space char.

```
528 local default_space_char = nodenew(GLYPH)
529 local default_fontid      = fontid("TU/lmr/m/n/10")
530 local default_currfontid = fontid("TU/lmr/m/n/10")
531 default_space_char.char  = 32
532 default_space_char.font  = default_fontid
```

And a function to check as best as possible if a font has a space:

```
533 local function __tag_font_has_space (fontid)
534  t= fonts.hashes.identifiers[fontid]
535  if luaotfload.aux.slot_of_name(fontid,"space")
536    or t.characters and t.characters[32] and t.characters[32]["unicode"]==32
537  then
538    return true
539  else
540    return false
541  end
542 end
```

__tag_space_chars_shipout
ltx.__tag.func.space_chars_shipout

These is the main function to insert real space chars. It inserts a glyph before every glue which has been marked previously. The attributes are copied from the glue, so if the tagging is done later, it will be tagged like it.

```
543 local function __tag_space_chars_shipout (box)
544  local head = box.head
545   if head then
546    for n in node.traverse(head) do
547      local spaceattr = nodegetattribute(n,iwspaceattributeid)  or -1
548      if n.id == HLIST  then -- enter the hlist
549          __tag_space_chars_shipout (n)
550      elseif n.id == VLIST then -- enter the vlist
551          __tag_space_chars_shipout (n)
552      elseif n.id == GLUE then
553        if ltx.__tag.trace.showspaces and spaceattr==1  then
554          __tag_show_spacemark (head,n,"0 1 0")
555        end
556        if spaceattr==1  then
557          local space
558          local space_char = node.copy(default_space_char)
559          local curfont    = nodegetattribute(n,iwfontattributeid)
560          ltx.__tag.trace.log ("INFO SPACE-FUNCTION-FONT: ".. tostring(curfont),3)
561          if curfont and
562            -- luaotfload.aux.slot_of_name(curfont,"space")
563            __tag_font_has_space (curfont)
564          then
565            space_char.font=curfont
566          end
567          head, space = node.insert_before(head, n, space_char) --
568          n.width     = n.width - space.width
569          space.attr  = n.attr
570        end
571      end
572    end
573    box.head = head
```

148

```
574    end
575  end
576

578    __tag_space_chars_shipout (box)
579  end
```

(*End of definition for* `__tag_space_chars_shipout` *and* `ltx.__tag.func.space_chars_shipout`.)

5   Function for the tagging

ltx._tag.func.mc_insert_kids   This is the main function to insert the K entry into a StructElem object. It is used in tagpdf-mc-luacode module. The `single` attribute allows to handle the case that a single mc on the tex side can have more than one kid after the processing here, and so we get the correct array/non array setup.

```
580  function ltx.__tag.func.mc_insert_kids (mcnum,single)
581    if ltx.__tag.mc[mcnum] then
582    ltx.__tag.trace.log("INFO TEX-MC-INSERT-KID-TEST: " .. mcnum,4)
583     if ltx.__tag.mc[mcnum]["kids"] then
584      if #ltx.__tag.mc[mcnum]["kids"] > 1 and single==1 then
585       tex.sprint("[")
586      end
587      for i,kidstable in ipairs( ltx.__tag.mc[mcnum]["kids"] ) do
588       local kidnum  = kidstable["kid"]
589       local kidpage = kidstable["page"]
590       local kidpageobjnum = pdfpageref(kidpage)
591       ltx.__tag.trace.log("INFO TEX-MC-INSERT-KID: " .. mcnum ..
592                          " insert KID " ..i..
593                          " with num " .. kidnum ..
594                          " on page " .. kidpage.."/"..kidpageobjnum,3)
595      tex.sprint(catlatex,"<</Type /MCR /Pg "..kidpageobjnum .. " 0 R /MCID "..kidnum.. ">> " )
596      end
597      if #ltx.__tag.mc[mcnum]["kids"] > 1 and single==1 then
598       tex.sprint("]")
599      end
600     else
601      -- this is typically not a problem, e.g. empty hbox in footer/header can
602      -- trigger this warning.
603      ltx.__tag.trace.log("WARN TEX-MC-INSERT-NO-KIDS: "..mcnum.." has no kids",2)
604      if single==1 then
605        tex.sprint("null")
606      end
607     end
608    else
609     ltx.__tag.trace.log("WARN TEX-MC-INSERT-MISSING: "..mcnum.." doesn't exist",0)
610    end
611  end
```

(*End of definition for* `ltx.__tag.func.mc_insert_kids`.)

ltx._tag.func.store_struct_mcabs   This function is used in the tagpdf-mc-luacode. It store the absolute count of the mc into the current structure. This must be done ordered.

```
612  function ltx.__tag.func.store_struct_mcabs (structnum,mcnum)
```

```
613  ltx.__tag.struct[structnum]=ltx.__tag.struct[structnum] or { }
614  ltx.__tag.struct[structnum]["mc"]=ltx.__tag.struct[structnum]["mc"] or { }
615  -- a structure can contain more than on mc chunk, the content should be ordered
616  tableinsert(ltx.__tag.struct[structnum]["mc"],mcnum)
617  ltx.__tag.trace.log("INFO TEX-MC-INTO-STRUCT: "..
618                      mcnum.." inserted in struct "..structnum,3)
619  -- but every mc can only be in one structure
620  ltx.__tag.mc[mcnum]= ltx.__tag.mc[mcnum] or { }
621  ltx.__tag.mc[mcnum]["parent"] = structnum
622  end
623
```

(*End of definition for* `ltx.__tag.func.store_struct_mcabs`.)

`ltx.__tag.func.store_mc_in_page`   This is used in the traversing code and stores the relation between abs count and page count.

```
624  -- pay attention: lua counts arrays from 1, tex pages from one
625  -- mcid and arrays in pdf count from 0.
626  function ltx.__tag.func.store_mc_in_page (mcnum,mcpagecnt,page)
627  ltx.__tag.page[page] = ltx.__tag.page[page] or {}
628  ltx.__tag.page[page][mcpagecnt] = mcnum
629  ltx.__tag.trace.log("INFO TAG-MC-INTO-PAGE: page " .. page ..
630                      ": inserting MCID " .. mcpagecnt .. " => " .. mcnum,3)
631  end
```

(*End of definition for* `ltx.__tag.func.store_mc_in_page`.)

`ltx.__tag.func.update_mc_attributes`   This updates the mc-attributes of a box. It should only be used on boxes which don't contain structure elements. The arguments are a box, the mc-num and the type (as a number)

```
632  local function __tag_update_mc_attributes (head,mcnum,type)
633  for n in node.traverse(head) do
634    node.set_attribute(n,mccntattributeid,mcnum)
635    node.set_attribute(n,mctypeattributeid,type)
636    if n.id == HLIST or n.id == VLIST then
637      __tag_update_mc_attributes (n.list,mcnum,type)
638    end
639  end
640  return head
641  end
642  ltx.__tag.func.update_mc_attributes = __tag_update_mc_attributes
```

(*End of definition for* `ltx.__tag.func.update_mc_attributes`.)

`ltx.__tag.func.mark_page_elements`   This is the main traversing function. See the lua comment for more details.

Part IX

The **tagpdf-roles** module
Tags, roles and namesspace code
Part of the tagpdf package

`add-new-tag␣(setup-key)`
`tag␣(rolemap-key)`
`namespace␣(rolemap-key)`
`role␣(rolemap-key)`
`role-namespace␣(rolemap-key)`

The `add-new-tag` key can be used in `\tagpdfsetup` to declare and rolemap new tags. It takes as value a key-value list or a simple `new-tag/old-tag`.

The key-value list knows the following keys:

tag This is the name of the new tag as it should then be used in `\tagstructbegin`.

namespace This is the namespace of the new tag. The value should be a shorthand of a namespace. The allowed values are currently `pdf`, `pdf2`, `mathml`,`latex`, `latex-book` and `user`. The default value (and recommended value for a new tag) is `user`. The public name of the user namespace is `tag/NS/user`. This can be used to reference the namespace e.g. in attributes.

role This is the tag the tag should be mapped too. In a PDF 1.7 or earlier this is normally a tag from the `pdf` set, in PDF 2.0 from the `pdf`, `pdf2` and `mathml` set. It can also be a user tag. The tag must be declared before, as the code retrieves the class of the new tag from it. The PDF format allows mapping to be done transitively. But tagpdf can't/won't check such unusual role mapping.

role-namespace If the role is a known tag the default value is the default namespace of this tag. With this key a specific namespace can be forced.

Namespaces are mostly a PDF 2.0 property, but it doesn't harm to set them also in a PDF 1.7 or earlier.

`\tag_check_child:nn`*TF*   `\tag_check_child:nn{`⟨*tag*⟩`}{`⟨*namespace*⟩`}` `{`⟨*true code*⟩`}` `{`⟨*false code*⟩`}`

This checks if the tag ⟨*tag*⟩ from the name space ⟨*namespace*⟩ can be used at the current position. In tagpdf-base it is always true.

```

1 Code related to roles and structure names

₆ ⟨∗package⟩

1.1 Variables

Tags are used in structures (`\tagstructbegin`) and mc-chunks (`\tagmcbegin`).

They have a name (a string), in lua a number (for the lua attribute), and in PDF 2.0 belong to one or more name spaces, with one being the default name space.

Tags of structures are classified, e.g. as grouping, inline or block level structure (and a few special classes like lists and tables), and must follow containments rules depending on their classification (for example a inline structure can not contain a block level structure). New tags inherit their classification from their rolemapping to the standard namespaces (`pdf` and/or `pdf2`). We store this classification as it will probably be needed for tests but currently the data is not much used. The classification for math (and the containment rules) is unclear currently and so not set.

The attribute number is only relevant in lua and only for the MC chunks (so tags with the same name from different names spaces can have the same number), and so only stored if luatex is detected.

Due to the namespaces the storing and processing of tags and there data are different in various places for PDF 2.0 and PDF <2.0, which makes things a bit difficult and leads to some duplications. Perhaps at some time there should be a clear split.

This are the main variables used by the code:

`\g__tag_role_tags_NS_prop` This is the core list of tag names. It uses tags as keys and the shorthand (e.g. pdf2, or mathml) of the default name space as value.

In pdf 2.0 the value is needed in the structure dictionaries.

`\g__tag_role_tags_class_prop` This contains for each tag a classification type. It is used in pdf <2.0.

`\g__tag_role_NS_prop` This contains the names spaces. The values are the object references. They are used in pdf 2.0.

`\g__tag_role_rolemap_prop` This contains for each tag the role to a standard tag. It is used in pdf<2.0 for tag checking and to fill at the end the RoleMap dictionary.

`g_@@_role/RoleMap_dict` This dictionary contains the standard rolemaps. It is relevant only for pdf <2.0.

`\g__tag_role_NS_<ns>_prop` This prop contains the tags of a name space and their role. The props are also use for remapping. As value they contain two brace groups: tag and namespace. In pdf <2.0 the namespace is empty.

`\g__tag_role_NS_<ns>_class_prop` This prop contains the tags of a name space and their type. The value is only needed for pdf 2.0.

`\g__tag_role_index_prop` This prop contains the standard tags (pdf in pdf<2.0, pdf,pdf2 + mathml in pdf 2.0) as keys, the values are a two-digit number. These numbers are used to get the containment rule of two tags from the intarray.

`\l__tag_role_debug_prop` This property is used to pass some info around for info messages or debugging.

`\g__tag_role_tags_NS_prop` This is the core list of tag names. It uses tags as keys and the shorthand (e.g. pdf2, or mathml) of the default name space as value. We store the default name space also in pdf <2.0, even if not needed: it doesn't harm and simplifies the code. There is no need to access this from lua, so we use the standard prop commands.

```
7 \prop_new:N     \g__tag_role_tags_NS_prop
```

(*End of definition for* `\g__tag_role_tags_NS_prop`.)

`\g__tag_role_tags_class_prop` With pdf 2.0 we store the class in the NS dependant props. With pdf <2.0 we store for now the type(s) of a tag in a common prop. Tags that are rolemapped should get the type from the target.

```
8 \prop_new:N     \g__tag_role_tags_class_prop
```

(*End of definition for* `\g__tag_role_tags_class_prop`.)

`\g__tag_role_NS_prop` This holds the list of supported name spaces. The keys are the name tagpdf will use, the values the object reference. The urls identifier are stored in related dict object.

mathml http://www.w3.org/1998/Math/MathML

pdf2 http://iso.org/pdf2/ssn

pdf http://iso.org/pdf/ssn (default)

user `\c__tag_role_userNS_id_str` (random id, for user tags)

latex https://www.latex-project.org/ns/dflt/2022

latex-book https://www.latex-project.org/ns/book/2022

More namespaces are possible and their objects references and their rolemaps must be collected so that an array can be written to the StructTreeRoot at the end (see tagpdf-tree). We use a prop to store the object reference as it will be needed rather often.

```
9 \prop_new:N \g__tag_role_NS_prop
```

(*End of definition for* `\g__tag_role_NS_prop`.)

`\g__tag_role_index_prop` This prop contains the standard tags (pdf in pdf<2.0, pdf,pdf2 + mathml in pdf 2.0) as keys, the values are a two-digit number. These numbers are used to get the containment rule of two tags from the intarray.

```
10 \prop_new:N \g__tag_role_index_prop
```

(*End of definition for* `\g__tag_role_index_prop`.)

`\l__tag_role_debug_prop` This variable is used to pass more infos to debug messages.

```
11 \prop_new:N \l__tag_role_debug_prop
```

(*End of definition for* `\l__tag_role_debug_prop`.)
   We need also a bunch of temporary variables.

`\l__tag_role_tag_tmpa_tl`
`\l__tag_role_tag_namespace_tmpa_tl`
`\l__tag_role_tag_namespace_tmpb_tl␣␣␣␣␣␣␣%`
`\l__tag_role_role_tmpa_tl`
`\l__tag_role_role_namespace_tmpa_tl`
`\l__tag_role_tmpa_seq`

```
12 \tl_new:N \l__tag_role_tag_tmpa_tl
13 \tl_new:N \l__tag_role_tag_namespace_tmpa_tl
14 \tl_new:N \l__tag_role_tag_namespace_tmpb_tl
15 \tl_new:N \l__tag_role_role_tmpa_tl
16 \tl_new:N \l__tag_role_role_namespace_tmpa_tl
17 \seq_new:N\l__tag_role_tmpa_seq
```

(*End of definition for* `\l__tag_role_tag_tmpa_tl` *and others.*)

1.2 Namespaces

The following commands setups a name space. With pdf version <2.0 this is only a prop with the rolemap. With pdf 2.0 a dictionary must be set up. Such a name space dictionaries can contain an optional /Schema and /RoleMapNS entry. We only reserve the objects but delay the writing to the finish code, where we can test if the keys and the name spaces are actually needed. This commands setups objects for the name space and its rolemap. It also initialize a dict to collect the rolemaps if needed, and a property with the tags of the name space and their rolemapping for loops. It is unclear if a reference to a schema file will be ever needed, but it doesn't harm . . . .

g__tag_role/RoleMap_dict
\g__tag_role_rolemap_prop

This is the object which contains the normal RoleMap. It is probably not needed in pdf 2.0 but currently kept.

```
18 \pdfdict_new:n {g__tag_role/RoleMap_dict}
19 \prop_new:N \g__tag_role_rolemap_prop
```

(*End of definition for* `g__tag_role/RoleMap_dict` *and* `\g__tag_role_rolemap_prop`.)

__tag_role_NS_new:nnn   __tag_role_NS_new:nnn{⟨shorthand⟩}{⟨URI-ID⟩}Schema

__tag_role_NS_new:nnn

```
20 \pdf_version_compare:NnTF < {2.0}
21  {
22    \cs_new_protected:Npn \__tag_role_NS_new:nnn #1 #2 #3
23      {
24        \prop_new:c { g__tag_role_NS_#1_prop }
25        \prop_new:c { g__tag_role_NS_#1_class_prop }
26        \prop_gput:Nne \g__tag_role_NS_prop {#1}{}
27      }
28  }
29  {
30    \cs_new_protected:Npn \__tag_role_NS_new:nnn #1 #2 #3
31      {
32        \prop_new:c { g__tag_role_NS_#1_prop }
33        \prop_new:c { g__tag_role_NS_#1_class_prop }
34        \pdf_object_new:n {tag/NS/#1}
35        \pdfdict_new:n     {g__tag_role/Namespace_#1_dict}
36        \pdf_object_new:n {__tag/RoleMapNS/#1}
37        \pdfdict_new:n     {g__tag_role/RoleMapNS_#1_dict}
38        \pdfdict_gput:nnn
39          {g__tag_role/Namespace_#1_dict}
40          {Type}
41          {/Namespace}
42        \pdf_string_from_unicode:nnN{utf8/string}{#2}\l__tag_tmpa_str
43        \tl_if_empty:NF \l__tag_tmpa_str
44          {
45            \pdfdict_gput:nne
46              {g__tag_role/Namespace_#1_dict}
47              {NS}
48              {\l__tag_tmpa_str}
49          }
50        %RoleMapNS is added in tree
51        \tl_if_empty:nF  {#3}
```

```
52        {
53          \pdfdict_gput:nne{g__tag_role/Namespace_#1_dict}
54           {Schema}{#3}
55        }
56      \prop_gput:Nne \g__tag_role_NS_prop {#1}{\pdf_object_ref:n{tag/NS/#1}~}
57    }
58  }
```

(*End of definition for* `\__tag_role_NS_new:nnn`.)

We need an id for the user space. For the tests it should be possible to set it to a fix value. So we use random numbers which can be fixed by setting a seed. We fake a sort of GUID but do not try to be really exact as it doesn't matter ...

`\c__tag_role_userNS_id_str`

```
59  \str_const:Ne \c__tag_role_userNS_id_str
60    { data:,
61      \int_to_Hex:n{\int_rand:n {65535}}
62      \int_to_Hex:n{\int_rand:n {65535}}
63      -
64      \int_to_Hex:n{\int_rand:n {65535}}
65      -
66      \int_to_Hex:n{\int_rand:n {65535}}
67      -
68      \int_to_Hex:n{\int_rand:n {65535}}
69      -
70      \int_to_Hex:n{\int_rand:n {16777215}}
71      \int_to_Hex:n{\int_rand:n {16777215}}
72    }
```

(*End of definition for* `\c__tag_role_userNS_id_str`.)

Now we setup the standard names spaces. The mathml space is loaded also for pdf < 2.0 but not added to RoleMap unless a boolean is set to true with `tagpdf-setup{mathml-tags}`.

```
73  \bool_new:N \g__tag_role_add_mathml_bool
74  \__tag_role_NS_new:nnn {pdf}   {http://iso.org/pdf/ssn}{}
75  \__tag_role_NS_new:nnn {pdf2}  {http://iso.org/pdf2/ssn}{}
76  \__tag_role_NS_new:nnn {mathml}{http://www.w3.org/1998/Math/MathML}{}
77  \__tag_role_NS_new:nnn {latex} {https://www.latex-project.org/ns/dflt/2022}{}
78  \__tag_role_NS_new:nnn {latex-book} {https://www.latex-project.org/ns/book/2022}{}
79  \exp_args:Nne
80    \__tag_role_NS_new:nnn {user}{\c__tag_role_userNS_id_str}{}
```

1.3 Adding a new tag

Both when reading the files and when setting up a tag manually we have to store data in various places.

`\__tag_role_alloctag:nnn` This command allocates a new tag without role mapping. In the lua backend it will also record the attribute value.

```
81  \pdf_version_compare:NnTF < {2.0}
82    {
83    \sys_if_engine_luatex:TF
84      {
```

160

```
85     \cs_new_protected:Npn \__tag_role_alloctag:nnn #1 #2 #3 %#1 tagname, ns, type
86       {
87         \lua_now:e { ltx.__tag.func.alloctag ('#1') }
88         \prop_gput:Nnn \g__tag_role_tags_NS_prop    {#1}{#2}
89         \prop_gput:cnn {g__tag_role_NS_#2_prop}   {#1}{{}{}}
90         \prop_gput:Nnn \g__tag_role_tags_class_prop {#1}{#3}
91         \prop_gput:cnn {g__tag_role_NS_#2_class_prop}  {#1}{--UNUSED--}
92       }
93     }
94     {
95       \cs_new_protected:Npn \__tag_role_alloctag:nnn #1 #2 #3
96         {
97           \prop_gput:Nnn \g__tag_role_tags_NS_prop    {#1}{#2}
98           \prop_gput:cnn {g__tag_role_NS_#2_prop}   {#1}{{}{}}
99           \prop_gput:Nnn \g__tag_role_tags_class_prop {#1}{#3}
100          \prop_gput:cnn {g__tag_role_NS_#2_class_prop}  {#1}{--UNUSED--}
101        }
102     }
103    }
104    {
105    \sys_if_engine_luatex:TF

123          }
124      }
125    }
126  \cs_generate_variant:Nn  \__tag_role_alloctag:nnn {nnV}
```

(*End of definition for* `\__tag_role_alloctag:nnn`.)

1.3.1   pdf 1.7 and earlier

`\__tag_role_add_tag:nn` The pdf 1.7 version has only two arguments: new and rolemap name. The role must be an existing tag and should not be empty. We allow to change the role of an existing tag: as the rolemap is written at the end not confusion can happen.

```
127  \cs_new_protected:Nn \__tag_role_add_tag:nn % (new) name, reference to old
128    {
```

checks and messages

```
129        \__tag_check_add_tag_role:nn {#1}{#2}
130        \prop_if_in:NnF \g__tag_role_tags_NS_prop {#1}
131          {
132            \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
133              {
134                \msg_info:nnn { tag }{new-tag}{#1}
135              }
136          }
```

now the addition

```
137        \prop_get:NnN \g__tag_role_tags_class_prop {#2}\l__tag_tmpa_tl
138        \quark_if_no_value:NT \l__tag_tmpa_tl
139          {
140            \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
141          }
142        \__tag_role_alloctag:nnV {#1}{user}\l__tag_tmpa_tl
```

We resolve rolemapping recursively so that all targets are stored as standard tags.

```
143        \tl_if_empty:nF { #2 }
144          {
145            \prop_get:NnN \g__tag_role_rolemap_prop {#2}\l__tag_tmpa_tl
146            \quark_if_no_value:NTF \l__tag_tmpa_tl
147              {
148                \prop_gput:Nne \g__tag_role_rolemap_prop {#1}{\tl_to_str:n{#2}}
149              }
150              {
151                \prop_gput:NnV \g__tag_role_rolemap_prop {#1}\l__tag_tmpa_tl
152              }
153          }
154      }
155 \cs_generate_variant:Nn \__tag_role_add_tag:nn {VV,ne}
```

(*End of definition for* __tag_role_add_tag:nn.)

For the parent-child test we must be able to get the role. We use the same number of arguments as for the 2.0 command. If there is no role, we assume a standard tag.

__tag_role_get:nnNN

```
156 \pdf_version_compare:NnT < {2.0}
157  {
158    \cs_new:Npn \__tag_role_get:nnNN #1#2#3#4 %#1 tag, #2 NS, #3 tlvar which hold the role tag
159      {
160        \prop_get:NnNF \g__tag_role_rolemap_prop {#1}#3
161          {
162            \tl_set:Nn #3 {#1}
163          }
164        \tl_set:Nn #4 {}
165      }
166    \cs_generate_variant:Nn \__tag_role_get:nnNN {VVNN}
167  }
168
```

(*End of definition for* __tag_role_get:nnNN.)

1.3.2 The pdf 2.0 version

__tag_role_add_tag:nnnn   The pdf 2.0 version takes four arguments: tag/namespace/role/namespace

```
169 \cs_new_protected:Nn \__tag_role_add_tag:nnnn %tag/namespace/role/namespace
170   {
171     \__tag_check_add_tag_role:nnn {#1/#2}{#3}{#4}
172     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
173       {
174         \msg_info:nnn { tag }{new-tag}{#1}
175       }
176     \prop_if_exist:cTF
177       { g__tag_role_NS_#4_class_prop }
178       {
179         \prop_get:cnN { g__tag_role_NS_#4_class_prop } {#3}\l__tag_tmpa_tl
180         \quark_if_no_value:NT \l__tag_tmpa_tl
181           {
182             \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
183           }
184       }
185       { \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--} }
186     \__tag_role_alloctag:nnV {#1}{#2}\l__tag_tmpa_tl
```

Do not remap standard tags. TODO add warning?

```
187     \tl_if_in:nnF {-pdf-pdf2-mathml-}{-#2-}
188       {
189         \pdfdict_gput:nne {g__tag_role/RoleMapNS_#2_dict}{#1}
190           {
191             [
192               \pdf_name_from_unicode_e:n{#3}
193               \c_space_tl
194               \pdf_object_ref:n {tag/NS/#4}
195             ]
196           }
197       }
```

We resolve rolemapping recursively so that all targets are stored as standard tags for the tests.

```
198     \tl_if_empty:nF { #2 }
199       {
200         \prop_get:cnN { g__tag_role_NS_#4_prop } {#3}\l__tag_tmpa_tl
201         \quark_if_no_value:NTF \l__tag_tmpa_tl
202           {
203             \prop_gput:cne { g__tag_role_NS_#2_prop } {#1}
204               {{\tl_to_str:n{#3}}{\tl_to_str:n{#4}}}
205           }
206           {
207             \prop_gput:cno { g__tag_role_NS_#2_prop } {#1}{\l__tag_tmpa_tl}
208           }
209       }
```

We also store into the pdf 1.7 rolemapping so that we can add that as fallback for pdf 1.7 processor

```
210     \bool_if:NT \l__tag_role_update_bool
211       {
212         \tl_if_empty:nF { #3 }
```

```
213              {
214                \tl_if_eq:nnF{#1}{#3}
215                  {
216                    \prop_get:NnN \g__tag_role_rolemap_prop {#3}\l__tag_tmpa_tl
217                    \quark_if_no_value:NTF \l__tag_tmpa_tl
218                      {
219                        \prop_gput:Nne \g__tag_role_rolemap_prop {#1}{\tl_to_str:n{#3}}
220                      }
221                      {
222                        \prop_gput:NnV \g__tag_role_rolemap_prop {#1}\l__tag_tmpa_tl
223                      }
224                  }
225              }
226          }
227      }
228  \cs_generate_variant:Nn \__tag_role_add_tag:nnnn {VVVV}
```

(*End of definition for* __tag_role_add_tag:nnnn*.*)

For the parent-child test we must be able to get the role. We use the same number of arguments as for the <2.0 command (and assume that we don't need a name space)

__tag_role_get:nnNN

```
229  \pdf_version_compare:NnF < {2.0}
230    {
231      \cs_new:Npn \__tag_role_get:nnNN #1#2#3#4
232        %#1 tag, #2 NS,
233        %#3 tlvar which hold the role tag
234        %#4 tlvar which hold the name of the target NS
235        {
236          \prop_if_exist:cTF {g__tag_role_NS_#2_prop}
237            {
238              \prop_get:cnNTF {g__tag_role_NS_#2_prop} {#1}\l__tag_get_tmpc_tl
239                {
240                  \tl_set:Ne #3 {\exp_last_unbraced:NV\use_i:nn   \l__tag_get_tmpc_tl}
241                  \tl_set:Ne #4 {\exp_last_unbraced:NV\use_ii:nn  \l__tag_get_tmpc_tl}
242                }
243                {
244                  \msg_warning:nnn { tag } {role-unknown-tag} { #1 }
245                  \tl_set:Nn #3 {#1}
246                  \tl_set:Nn #4 {#2}
247                }
248            }
249            {
250              \msg_warning:nnn { tag } {role-unknown-NS} { #2 }
251              \tl_set:Nn #3 {#1}
252              \tl_set:Nn #4 {#2}
253            }
254        }
255      \cs_generate_variant:Nn \__tag_role_get:nnNN {VVNN}
256    }
```

(*End of definition for* __tag_role_get:nnNN*.*)

1.4 Helper command to read the data from files

In this section we setup the helper command to read namespace files.

_tag_role_read_namespace_line:nw This command will process a line in the name space file. The first argument is the name of the name space. The definition differ for pdf 2.0. as we have proper name spaces there. With pdf<2.0 special name spaces shouldn't update the default role or add to the rolemap again, they only store the values for later uses. We use a boolean here.

```
257 \bool_new:N\l__tag_role_update_bool
258 \bool_set_true:N \l__tag_role_update_bool
259 \pdf_version_compare:NnTF < {2.0}
260  {
261    \cs_new_protected:Npn \__tag_role_read_namespace_line:nw #1#2,#3,#4,#5,#6\q_stop %
262    % #1 NS, #2 tag, #3 rolemap, #4 NS rolemap #5 type
263      {
264        \tl_if_empty:nF { #2 }
265          {
266           \bool_if:NTF \l__tag_role_update_bool
267            {
268             \tl_if_empty:nTF {#5}
269               {
270                 \prop_get:NnN \g__tag_role_tags_class_prop  {#3}\l__tag_tmpa_tl
271                 \quark_if_no_value:NT \l__tag_tmpa_tl
272                   {
273                     \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
274                   }
275               }
276               {
277                 \tl_set:Nn \l__tag_tmpa_tl {#5}
278               }

295    % #1 NS, #2 tag, #3 rolemap, #4 NS rolemap #5 type
296      {
297        \tl_if_empty:nF {#2}
298          {
299           \tl_if_empty:nTF {#5}
300            {
301              \prop_get:cnN { g__tag_role_NS_#4_class_prop } {#3}\l__tag_tmpa_tl
302              \quark_if_no_value:NT \l__tag_tmpa_tl
```

```
303                {
304                  \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
305                }
306            }
307            {
308              \tl_set:Nn \l__tag_tmpa_tl {#5}
309            }
310          \__tag_role_alloctag:nnV {#2}{#1}\l__tag_tmpa_tl
311          \bool_lazy_and:nnT
312            { ! \tl_if_empty_p:n {#3} }{! \str_if_eq_p:nn {#1}{pdf2}}
313            {
314              \__tag_role_add_tag:nnnn {#2}{#1}{#3}{#4}
315            }
316          \prop_gput:cnn {g__tag_role_NS_#1_prop}  {#2}{{#3}{#4}}
317        }
318     }
319  }
```

(*End of definition for* __tag_role_read_namespace_line:nw.)

__tag_role_read_namespace:nn   This command reads a namespace file in the format tagpdf-ns-XX.def

```
320  \cs_new_protected:Npn \__tag_role_read_namespace:nn #1 #2 %name of namespace #2 name of file
321    {
322      \prop_if_exist:cF {g__tag_role_NS_#1_prop}
323        { \msg_warning:nnn {tag}{namespace-unknown}{#1} }
324      \file_if_exist:nTF { tagpdf-ns-#2.def }
325        {
326          \ior_open:Nn \g_tmpa_ior {tagpdf-ns-#2.def}
327          \msg_info:nnn {tag}{read-namespace}{#2}
328          \ior_map_inline:Nn \g_tmpa_ior
329            {
330              \__tag_role_read_namespace_line:nw {#1} ##1,,,,\q_stop
331            }
332          \ior_close:N\g_tmpa_ior
333        }
334        {
335          \msg_info:nnn{tag}{namespace-missing}{#2}
336        }
337    }
338
```

(*End of definition for* __tag_role_read_namespace:nn.)

__tag_role_read_namespace:n   This command reads the default namespace file.

```
339  \cs_new_protected:Npn \__tag_role_read_namespace:n #1 %name of namespace
340    {
341      \__tag_role_read_namespace:nn {#1}{#1}
342    }
```

(*End of definition for* __tag_role_read_namespace:n.)

1.5 Reading the default data

The order is important as we want pdf2 and latex as default: if two namespace define the same tag, the last one defines which one is used if the namespace is not explicitly given.

```
343 \__tag_role_read_namespace:n {pdf}
344 \__tag_role_read_namespace:n {pdf2}
345 \__tag_role_read_namespace:n {mathml}
```

in pdf 1.7 the following namespaces should only store the settings for later use:

```
346 \bool_set_false:N\l__tag_role_update_bool
347 \__tag_role_read_namespace:n {latex-book}
348 \bool_set_true:N\l__tag_role_update_bool
349 \__tag_role_read_namespace:n {latex}
350 \__tag_role_read_namespace:nn {latex} {latex-lab}
351 \__tag_role_read_namespace:n {pdf}
352 \__tag_role_read_namespace:n {pdf2}
```

But is the class provides a \chapter command then we switch

```
353 \pdf_version_compare:NnTF < {2.0}
354   {
355     \hook_gput_code:nnn {begindocument}{tagpdf}
356       {
357         \cs_if_exist:NT \chapter
358           {
359             \prop_map_inline:cn{g__tag_role_NS_latex-book_prop}
360               {
361                 \__tag_role_add_tag:ne {#1}{\use_i:nn #2\c_empty_tl\c_empty_tl}
362               }
363           }
364       }
365   }
366   {
367     \hook_gput_code:nnn {begindocument}{tagpdf}
368       {
369         \cs_if_exist:NT \chapter
370           {
371             \prop_map_inline:cn{g__tag_role_NS_latex-book_prop}
372               {
373                 \prop_gput:Nnn \g__tag_role_tags_NS_prop    { #1 }{ latex-book }
374                 \prop_gput:Nne
375                   \g__tag_role_rolemap_prop {#1}{\use_i:nn  #2\c_empty_tl\c_empty_tl}
376               }
377           }
378       }
379   }
```

1.6 Parent-child rules

PDF define various rules about which tag can be a child of another tag. The following code implements the matrix to allow to use it in tests.

\g__tag_role_parent_child_intarray This intarray will store the rule as a number. For parent nm and child ij (n,m,i,j digits) the rule is at position nmij. As we have around 56 tags, we need roughly a size 6000.

```
380 \intarray_new:Nn \g__tag_role_parent_child_intarray {6000}
```

(*End of definition for* \g__tag_role_parent_child_intarray.)

\c__tag_role_rules_prop These two properties map the rule strings to numbers and back. There are in tagpdf-
\c__tag_role_rules_num_prop data.dtx near the csv files for easier maintenance.

(*End of definition for* \c__tag_role_rules_prop *and* \c__tag_role_rules_num_prop.)

__tag_store_parent_child_rule:nnn The helper command is used to store the rule. It assumes that parent and child are given
as 2-digit number!

```
381 \cs_new_protected:Npn \__tag_store_parent_child_rule:nnn #1 #2 #3 % num parent, num child, #3
382   {
383     \intarray_gset:Nnn \g__tag_role_parent_child_intarray
384       { #1#2 }{0\prop_item:Nn\c__tag_role_rules_prop{#3}}
385   }
```

(*End of definition for* __tag_store_parent_child_rule:nnn.)

1.6.1 Reading in the csv-files

This counter will be used to identify the first (non-comment) line

```
386 \int_zero:N  \l__tag_tmpa_int
```

Open the file depending on the PDF version

```
387 \pdf_version_compare:NnTF < {2.0}
388   {
389     \ior_open:Nn \g_tmpa_ior {tagpdf-parent-child.csv}
390   }
391   {
392     \ior_open:Nn \g_tmpa_ior {tagpdf-parent-child-2.csv}
393   }
```

Now the main loop over the file

```
394 \ior_map_inline:Nn \g_tmpa_ior
395   {
```

ignore lines containing only comments

```
396     \tl_if_empty:nF{#1}
397       {
```

count the lines ...

```
398         \int_incr:N\l__tag_tmpa_int
```

put the line into a seq. Attention! empty cells are dropped.

```
399         \seq_set_from_clist:Nn\l__tag_tmpa_seq { #1 }
400         \int_compare:nNnTF {\l__tag_tmpa_int}=1
```

This handles the header line. It gives the tags 2-digit numbers

```
401           {
402             \seq_map_indexed_inline:Nn \l__tag_tmpa_seq
403               {
404                 \prop_gput:Nne\g__tag_role_index_prop
405                   {##2}
406                   {\int_compare:nNnT{##1}<{10}{0}##1}
407               }
408           }
```

now the data lines.

```
409            {
410                \seq_set_from_clist:Nn\l__tag_tmpa_seq { #1 }
```

get the name of the child tag from the first column

```
411                \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_tl
```

get the number of the child, and store it in `\l__tag_tmpb_tl`

```
412                \prop_get:NVN \g__tag_role_index_prop \l__tag_tmpa_tl \l__tag_tmpb_tl
```

remove column 2+3

```
413                \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_tl
414                \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_tl
```

Now map over the rest. The index `##1` gives us the number of the parent, `##2` is the data.

```
415                \seq_map_indexed_inline:Nn \l__tag_tmpa_seq
416                  {
417                    \exp_args:Nne
418                    \__tag_store_parent_child_rule:nnn {##1}{\l__tag_tmpb_tl}{ ##2 }
419                  }
420            }
421        }
422    }
```

close the read handle.

```
423 \ior_close:N\g_tmpa_ior
```

The Root, Hn and mathml tags are special and need to be added explicitly

```
424 \prop_get:NnN\g__tag_role_index_prop{StructTreeRoot}\l__tag_tmpa_tl
425 \prop_gput:Nne\g__tag_role_index_prop{Root}{\l__tag_tmpa_tl}
426 \prop_get:NnN\g__tag_role_index_prop{Hn}\l__tag_tmpa_tl
427 \pdf_version_compare:NnTF < {2.0}
428   {
429     \int_step_inline:nn{6}
430       {
431         \prop_gput:Nne\g__tag_role_index_prop{H#1}{\l__tag_tmpa_tl}
432       }
433   }
434   {
435     \int_step_inline:nn{10}
436       {
437         \prop_gput:Nne\g__tag_role_index_prop{H#1}{\l__tag_tmpa_tl}
438       }
```

all mathml tags are currently handled identically

```
439     \prop_get:NnN\g__tag_role_index_prop {mathml}\l__tag_tmpa_tl
440     \prop_get:NnN\g__tag_role_index_prop {math}\l__tag_tmpb_tl
441     \prop_map_inline:Nn \g__tag_role_NS_mathml_prop
442       {
443         \prop_gput:NnV\g__tag_role_index_prop{#1}\l__tag_tmpa_tl
444       }
445     \prop_gput:NnV\g__tag_role_index_prop{math}\l__tag_tmpb_tl
446   }
```

1.6.2 Retrieving the parent-child rule

_tag_role_get_parent_child_rule:nnnN

This command retrieves the rule (as a number) and stores it in the tl-var. It assumes that the tag in #1 is a standard tag after role mapping for which a rule exist and is *not* one of Part, Div, NonStruct as the real parent has already been identified. #3 can be used to pass along data about the original tags and is only used in messages.

TODO check temporary variables. Check if the tl-var should be fix.

```
447 \tl_new:N \l__tag_parent_child_check_tl
448 \cs_new_protected:Npn \__tag_role_get_parent_child_rule:nnnN #1 #2 #3 #4
449    % #1 parent (string) #2 child (string) #3 text for messages (eg. about Div or Rolemapping)
450    % #4 tl for state
451    {
452        \prop_get:NnN \g__tag_role_index_prop{#1}\l__tag_tmpa_tl
453        \prop_get:NnN \g__tag_role_index_prop{#2}\l__tag_tmpb_tl
454        \bool_lazy_and:nnTF
455          { ! \quark_if_no_value_p:N \l__tag_tmpa_tl }
456          { ! \quark_if_no_value_p:N \l__tag_tmpb_tl }
457          {
```

Get the rule from the intarray

```
458            \tl_set:Ne#4
459              {
460                \intarray_item:Nn
461                \g__tag_role_parent_child_intarray
462                {\l__tag_tmpa_tl\l__tag_tmpb_tl}
463              }
```

If the state is something is wrong ...

```
464            \int_compare:nNnT
465            {#4} = {\prop_item:Nn\c__tag_role_rules_prop{}}
466              {
467                %warn ?
```

we must take the current child from the stack if is already there, depending on location the check is called, this could also remove the parent, but that is ok too.

```
468              }
```

This is the message, this can perhaps go into debug mode.

```
469            \group_begin:
470            \int_compare:nNnT {\l__tag_tmpa_int*\l__tag_loglevel_int} > { 0 }
471              {
472                \prop_get:NVNF\c__tag_role_rules_num_prop #4 \l__tag_tmpa_tl
473                  {
474                    \tl_set:Nn \l__tag_tmpa_tl {unknown}
475                  }
476                \tl_set:Nn \l__tag_tmpb_tl {#1}
477                \msg_note:nneee
478                  { tag }
479                  { role-parent-child }
480                  { #1 }
481                  { #2 }
482                  {
483                    #4~(='\l__tag_tmpa_tl')
484                    \iow_newline:
485                    #3
```

```
486                         }
487                   }
488                \group_end:
489              }
490              {
491                \tl_set:Nn#4 {0}
492                \msg_warning:nneee
493                  { tag }
494                  {role-parent-child}
495                  { #1 }
496                  { #2 }
497                  { unknown! }
498              }
499        }
500    \cs_generate_variant:Nn\__tag_role_get_parent_child_rule:nnnN {VVVN,VVnN}
```

(*End of definition for* __tag_role_get_parent_child_rule:nnnN.)

__tag_check_parent_child:nnnnN This commands translates rolemaps its arguments and then calls **__tag_role_get_-**
parent_child_rule:nnnN. It does not try to resolve inheritance of `Div` etc but instead
warns that the rule can not be detected in this case. In pdf 2.0 the name spaces of the
tags are relevant, so we have arguments for them, but in pdf <2.0 they are ignored and
can be left empty.

```
501    \pdf_version_compare:NnTF < {2.0}
502      {
503       \cs_new_protected:Npn \__tag_check_parent_child:nnnnN #1 #2 #3 #4 #5
504        %#1 parent tag,#2 NS, #3 child tag, #4 NS, #5 tl var
505          {
```

for debugging messages we store the arguments.

```
506            \prop_put:Nnn \l__tag_role_debug_prop {parent} {#1}
507            \prop_put:Nnn \l__tag_role_debug_prop {child}  {#3}
```

get the standard tags through rolemapping if needed at first the parent

```
508            \prop_get:NnNTF \g__tag_role_index_prop {#1}\l__tag_tmpa_tl
509              {
510                \tl_set:Nn \l__tag_tmpa_tl {#1}
511              }
512              {
513                \prop_get:NnNF \g__tag_role_rolemap_prop {#1}\l__tag_tmpa_tl
514                  {
515                    \tl_set:Nn \l__tag_tmpa_tl {\q_no_value}
516                  }
517              }
```

now the child

```
518            \prop_get:NnNTF \g__tag_role_index_prop {#3}\l__tag_tmpb_tl
519              {
520                \tl_set:Nn \l__tag_tmpb_tl {#3}
521              }
522              {
523                \prop_get:NnNF \g__tag_role_rolemap_prop {#3}\l__tag_tmpb_tl
524                  {
525                    \tl_set:Nn \l__tag_tmpb_tl {\q_no_value}
526                  }
527              }
```

171

if we got tags for parent and child we call the checking command

```
528          \bool_lazy_and:nnTF
529            { ! \quark_if_no_value_p:N \l__tag_tmpa_tl }
530            { ! \quark_if_no_value_p:N \l__tag_tmpb_tl }
531            {
532              \__tag_role_get_parent_child_rule:VVnN
533                \l__tag_tmpa_tl \l__tag_tmpb_tl
534                {Rolemapped~from:~'#1'~--->~'#3'}
535                #5
536            }
537            {
538              \tl_set:Nn #5 {0}
539              \msg_warning:nneee
540              { tag }
541              {role-parent-child}
542              { #1 }
543              { #3 }
544              { unknown! }
545            }
546        }
547    \cs_new_protected:Npn \__tag_check_parent_child:nnN #1#2#3
548        {
549            \__tag_check_parent_child:nnnnN {#1}{}{#2}{}#3
550        }
551    }
```

and now the pdf 2.0 version The version with three arguments retrieves the default names space and then calls the full command. Not sure if this will ever be needed but we leave it for now.

```
552    {
553      \cs_new_protected:Npn \__tag_check_parent_child:nnN #1 #2 #3
554        {
555          \prop_get:NnN\g__tag_role_tags_NS_prop {#1}\l__tag_role_tag_namespace_tmpa_tl
556          \prop_get:NnN\g__tag_role_tags_NS_prop {#2}\l__tag_role_tag_namespace_tmpb_tl
557          \str_if_eq:nnT{#2}{MC}{\tl_clear:N \l__tag_role_tag_namespace_tmpb_tl}
558          \bool_lazy_and:nnTF
559            { ! \quark_if_no_value_p:N \l__tag_role_tag_namespace_tmpa_tl }
560            { ! \quark_if_no_value_p:N \l__tag_role_tag_namespace_tmpb_tl }
561            {
562              \__tag_check_parent_child:nVnVN
563                {#1}\l__tag_role_tag_namespace_tmpa_tl
564                {#2}\l__tag_role_tag_namespace_tmpb_tl
565                #3
566            }
567            {
568              \tl_set:Nn #3 {0}
569              \msg_warning:nneee
570              { tag }
571              {role-parent-child}
572              { #1 }
573              { #2 }
574              { unknown! }
575            }
576        }
```

and now the real command.

```
577    \cs_new_protected:Npn \__tag_check_parent_child:nnnnN #1 #2 #3 #4 #5 %tag,NS,tag,NS, tl va
578        {
579            \prop_put:Nnn \l__tag_role_debug_prop {parent} {#1/#2}
580            \prop_put:Nnn \l__tag_role_debug_prop {child}  {#3/#4}
```

If the namespace is empty, we assume a standard tag, otherwise we retrieve the rolemapping from the namespace

```
581            \tl_if_empty:nTF  {#2}
582              {
583                \tl_set:Nn \l__tag_tmpa_tl {#1}
584              }
585              {
586                \prop_if_exist:cTF { g__tag_role_NS_#2_prop }
587                  {
588                    \prop_get:cnNTF
589                      { g__tag_role_NS_#2_prop }
590                      {#1}
591                      \l__tag_tmpa_tl
592                      {
593                        \tl_set:Ne \l__tag_tmpa_tl {\tl_head:N\l__tag_tmpa_tl}
594                        \tl_if_empty:NT\l__tag_tmpa_tl
595                          {
596                            \tl_set:Nn \l__tag_tmpa_tl {#1}
597                          }
598                      }
599                      {
600                        \tl_set:Nn \l__tag_tmpa_tl {\q_no_value}
601                      }
602                  }
603                  {
604                    \msg_warning:nnn { tag } {role-unknown-NS} { #2}
605                    \tl_set:Nn \l__tag_tmpa_tl {\q_no_value}
606                  }
607              }
```

and the same for the child If the namespace is empty, we assume a standard tag, otherwise we retrieve the rolemapping from the namespace

```
608            \tl_if_empty:nTF  {#4}
609              {
610                \tl_set:Nn \l__tag_tmpb_tl {#3}
611              }
612              {
613                \prop_if_exist:cTF { g__tag_role_NS_#4_prop }
614                  {
615                    \prop_get:cnNTF
616                      { g__tag_role_NS_#4_prop }
617                      {#3}
618                      \l__tag_tmpb_tl
619                      {
620                        \tl_set:Ne \l__tag_tmpb_tl { \tl_head:N\l__tag_tmpb_tl }
621                        \tl_if_empty:NT\l__tag_tmpb_tl

1.7 Remapping of tags

In some context it can be necessary to remap or replace the tags. That means instead of tag=H1 or tag=section one wants the effect of tag=Span. Or instead of tag=P one wants tag=Code.

The following command provide some general interface for this. The core idea is that before a tag is set it is fed through a function that can change it. We want to be able to chain such functions, so all of them manipulate the same variables.

`\l__tag_role_remap_tag_tl`
`\l__tag_role_remap_NS_tl`

```
676 \tl_new:N \l__tag_role_remap_tag_tl
677 \tl_new:N \l__tag_role_remap_NS_tl
```

(*End of definition for* `\l__tag_role_remap_tag_tl` *and* `\l__tag_role_remap_NS_tl`.)

`\__tag_role_remap:` This function is used in the structure and the mc code before using a tag. By default it does nothing with the tl vars. Perhaps this should be a hook?

```
678 \cs_new_protected:Npn \__tag_role_remap: {  }
```

(*End of definition for* `\__tag_role_remap:`.)

`\__tag_role_remap_id:` This is copy in case we have to restore the main command.

```
679 \cs_set_eq:NN \__tag_role_remap_id: \__tag_role_remap:
```

(*End of definition for* `\__tag_role_remap_id:`.)

1.8 Key-val user interface

The user interface uses the key `add-new-tag`, which takes either a keyval list as argument, or a tag/role.

`tag␣(rolemap-key)`
`tag-namespace␣(rolemap-key)`
`role␣(rolemap-key)`
`role-namespace␣(rolemap-key)`
`role/new-tag␣(setup-key)`
`add-new-tag␣(deprecated)`

```
680 \keys_define:nn { __tag / tag-role }

Part X
The **tagpdf-space** module
Code related to real space chars
Part of the tagpdf package

---
activate/space␣(setup-key)
interwordspace␣(deprecated)

This key allows to activate/deactivate the real space chars if the engine supports it. The allowed values are `true`, `on`, `false`, `off`. The old name of the key `interwordspace` is still supported but deprecated.

---
show-spaces␣(deprecated) This key is deprecated. Use `debug/show=spaces` instead. This key works only with luatex and shows with small red bars where spaces have been inserted. This is only for debugging and is not completly reliable (and change affect other literals and tagging), so it should be used with care.

```
1 ⟨@@=tag⟩
2 ⟨*header⟩
3 \ProvidesExplPackage {tagpdf-space-code} {2024-03-27} {0.99a}
4   {part of tagpdf - code related to real space chars}
5 ⟨/header⟩
```

1   Code for interword spaces

The code is engine/backend dependant. Basically only pdftex and luatex support real space chars. Most of the code for luatex which uses attributes is in the lua code, here are only the keys.

activate/spaces␣(setup-key)
interwordspace␣(deprecated)
show-spaces␣(deprecated)

```
6 ⟨*package⟩
7 \keys_define:nn { __tag / setup }
8   {
