NAME

     bibcop – Style Checker and Fixer of .bib Files

SYNOPSIS

     bibcop [<options>] <.bib file path>

DESCRIPTION

     The bibcop tool is a Perl script for checking the quality of .bib files and automatically fixing found inconsistencies. It is not only a command line tool, but a LaTeX package, which can check the quality of a .bib file during the rendering of a LaTeX document. All found issues are reported as LaTeX warnings.

OPTIONS

     Various options apply

     --version

          Print the version of the tool

     --help   Print the introduction screen

     --fix   Autho-fix all issues and print a new content to the console

     --latex   Print everything in LaTeX format

BUGS

AUTHOR

     Yegor Bugayenko (yegor256@gmail.com)

     Please log issues on the GitHub homepage: https://github.com/yegor256/bibcop/issues.
